# 1 Executive Summary

## 1.1 Program Summary

This report describes process and impact findings for the Duke Energy Carolinas and Duke Energy Progress My Home Energy Report (MyHER) offered to residential customers who live in single-metered, single family homes with thirteen months of usage history. MyHER relies on principles of behavioral science to encourage customer engagement with home energy management and energy efficiency. The program accomplishes this primarily by delivering a personalized report comparing each customer's energy use to that of a peer group of similar homes.<sup>1</sup> MyHER motivates customers to reduce their energy consumption by:

- Showing customers a comparison of their household electricity consumption to that of similar homes;
- Presenting a month-ahead forecast of electricity consumption disaggregated by end-use category;
- Suggesting tips for reducing energy use by changing customers' behavior or installing energy efficient equipment;
- Educating them about the energy savings benefits of Duke Energy's demand side management (DSM) programs; and
- Encouraging active management of their home's energy consumption.

## 1.2 Evaluation Objectives and High Level Findings

Nexant estimated the energy impacts associated with MyHER delivery for the period June 2017 to May 2018. This report also presents measurements of customer satisfaction and engagement for MyHER participants. The MyHER program is implemented as a randomized controlled trial (RCT). Customers are randomly assigned to either "treatment" or "control" groups for the purpose of measuring energy savings. Treatment customers are MyHER recipients (participants). The control group is a set of customers from whom the MyHER is intentionally withheld. The control group serves as the baseline against which MyHER impacts are measured. As Duke Energy customers become eligible for the MyHER program, Duke Energy randomly assigns them to one of these two groups.

The energy savings generated by the DEC MyHER program are presented in Table 1-1, showing that the evaluated impacts of the program are 248 kWh per household. The energy savings generated by the DEP MyHER program are presented in Table 1-2, showing that the evaluated impacts of the program are 201 kWh per household. These evaluated energy savings for the MyHER program are net of additional energy savings achieved through increased

<sup>1</sup> Homes are grouped by characteristics such as location, size, vintage, and heating fuel. Energy use is compared on groups of similar homes.

participation by the MyHER treatment group in other Duke Energy programs. Additional information concerning the evaluation period is shown in Table 1-3.

**Table 1-1: DEC Deemed and Evaluated Energy Impacts per Participating Household**

	Energy (kWh)	Confidence/Precision
Evaluated Impacts	248	90/6
Deemed Impacts	230	N/A

\*MyHER is an opt-out program. As such, all impacts are considered net impacts; Nexant also calculated the impacts of the MyHER program by removing savings achieved by MyHER participants via other Duke Energy Programs.

**Table 1-2: DEP Deemed and Evaluated Energy Impacts per Participating Household**

	Energy (kWh)	Confidence/Precision
Evaluated Impacts	201	90/9
Deemed Impacts	148	N/A

\*MyHER is an opt-out program. As such, all impacts are considered net impacts; Nexant also calculated the impacts of the MyHER program by removing savings achieved by MyHER participants via other Duke Energy Programs.

Evaluation Component	Start	End
Impact Evaluation Period	June 2017	May 2018
Customer Survey Period	January 2019	March 2019

## 1.3 Evaluation Recommendations

This evaluation finds the DEC MyHER program realized 137% of its claimed impacts and the DEP MyHER program realized 108% of its claimed impacts. The MyHER program remains fully deployed at these two Duke Energy jurisdictions, due to semiannual introductions of newly eligible customers to the treatment and control program populations. The continual addition of new customers to the program means that there will always be a mix of participants with respect to the duration of the customers' exposure to the treatment. Impacts delivered by behavioral programs such as MyHER have been shown in many evaluations of behavioral programs to vary depending on the length of that exposure, reaching maturity after 1-2 years of exposure to the program. As such, Duke Energy should generally expect that the newest cohorts of MyHER treatment customers will deliver lower energy savings than the established cohorts. In the case of DEC, some cohorts are attaining an age of 8 years.

Duke Energy undertakes substantial work in partnership with their implementation contractor, Tendril, Inc., in planning and coordinating the delivery of MyHER reports to more than 1.1 million customers in the Carolinas and more than 680,000 customers at Duke Energy Progress. Duke Energy has developed a production process that allows for the customization of MyHER messages, tips, and promotions on the basis of customer information and exposure to Duke Energy's demand-side management programs. Since the prior MyHER evaluation<sup>2</sup>, Tendril has implemented a number of improvements that have resulted in increased product quality, as evidenced by improved performance in Duke Energy's quality checks that take place before each batch of reports is sent to participants. The process evaluation finds that MyHER is successful in achieving its goal of enhancing customer motivation, awareness, and attention to saving energy in most areas probed by customer surveys.

Nexant has the following specific recommendations for enhancing Duke Energy's MyHER program:

- **Continue the commitment to simultaneous control and treatment assignment.** New assignments to treatment and control groups must be simultaneous and Tendril and Duke Energy should work to add all newly assigned treatment and control groups to their respective status in a single billing month, to the extent that is technically feasible.
- **Continue the practice of making assignments of new accounts to MyHER treatment and control groups once a year, or at most, twice a year.** The numbers of Duke Energy customers becoming eligible for the program each year do not facilitate more frequent assignments. This is due to the fact that sufficient numbers of customers must be set aside for the control group each time a group of customers is assigned to treatment in order for the evaluator to be able to measure the energy savings delivered by the new cohort.
- **Increase MyHER participant awareness of Interactive.** The process evaluation finds that current awareness of Interactive among DEP and DEC MyHER participants is very low; another program objective above increasing aware customers' engagement with Interactive is to more effectively get the word out about its existence and increase the number of aware customers.
- **Continue to drive engagement with the Interactive Portal.** MyHER Interactive's ability to deliver measurable energy savings is on the rise, as shown by this evaluation in comparison to the prior DEC evaluation, as well as the MyHER evaluations for other Duke Energy jurisdictions completed in the past year. We recommend that Duke Energy continue to drive more MyHER participants to the portal.
- **Continue to operate MyHER with an eye towards change management.** MyHER's implementer Tendril has made great strides in improving quality control performance since the prior DEC and DEP evaluations in the automation of quality control processes. Effective change management and stable staffing have been notable contributors to these improvements and they should continue to be emphasized in MyHER program

<sup>2</sup> DEC was previously evaluated in February 2016. DEP was previously evaluated in July 2017.

operations, especially as Tendril's new HER production platform, HOMERS (the Home Energy Reporting Service), is rolled out and its implementation is optimized.

- **Continue to prioritize the structuring of the processes and schedules for program elements.** Improved organization of tasks for elements such as the FFT report module has been a significant success in the operations of the MyHER program and has made reactive responses to impending deadlines and emergent challenges that characterized these operations in the past much less common. Program staff should seek out additional opportunities for the optimization of program schedules, tasks, and long term goals in this manner.

## 2 Introduction and Program Description

This section presents a brief description of the My Home Energy Report (MyHER) program as it is operated in the DEC and DEP service territories during the evaluation timeframe. This description is informed by document review, in-depth interviews with staff, and Nexant's understanding of program nuance developed through regular communication during the evaluation process.

### 2.1 Program Description

The MyHER program is a Duke Energy Carolinas and Duke Energy Progress behavioral product for demand-side management (DSM) of energy consumption and generation capacity requirements. The MyHER presents a comparison of participants' energy use to a peer group of similar homes. It is sent by direct mail eight times a year, and 12 times a year by email to customers that have provided Duke Energy with their email address.<sup>3</sup> The MyHER provides customer-specific information that allows customers to compare their energy use for the month and over the past year to the consumption of similar homes as well as homes considered to be energy-efficient. Reports include seasonal and household-appropriate energy savings tips and information on energy efficiency programs offered by Duke Energy. Many tips include low cost suggestions such as behavioral changes. An additional feature presents a month-ahead forecast of energy usage disaggregated by end-use type. Duke Energy contracts with Tendril Inc. for the management and delivery of its MyHER product.

Duke Energy also launched the MyHER Interactive Portal<sup>4</sup> in March 2015. MyHER Interactive seeks to engage customers in a responsive energy information and education dialogue. When customers enroll in the online portal they are given the opportunity to update and expand on information known to Duke Energy about their home and electricity consumption. Customers who have registered to use MyHER Interactive are also sent weekly energy management tips and conservation challenges via email. The general strategy of MyHER Interactive is to open communications between customers and the utility, as well as to explore new ways of engaging households in electricity consumption management.

Customers occupying single-family homes with an individual electric meter and at least thirteen months of electricity consumption history are eligible for MyHER in Duke Energy Carolinas and Duke Energy Progress territories in North Carolina and South Carolina. The program is an opt-out program: customers can notify Duke Energy if they no longer wish to receive a MyHER and will be subsequently removed from the program. Customers who receive both paper and email

<sup>3</sup> For clarity: MyHERs are only sent to customers randomly assigned to the treatment group. All of the customers in the treatment group receive paper MyHERs 8 times a year. Duke Energy has email contact information for some of the treatment customers – those email customers also receive email MyHERs 12 times a year. Therefore, the email customers receive both an email and paper MyHER 8 months of the year and only an email report 4 months of the year.

<sup>4</sup> We refer to the MyHER Interactive Portal simply as "Interactive" in the remainder of this report.

MyHERs may also opt out of the report format of their choice (i.e., elect to only receive MyHERs by email, or only receive them by U.S. Mail).

Duke Energy placed a portion of eligible customers into a control group to satisfy evaluation, measurement, and verification (EM&V) requirements. These control group customers are not eligible to participate in the MyHER program.

Duke Energy has several objectives for the MyHER program, including:

1. Generating cost effective energy savings;
2. Increasing customer awareness of household energy use, engagement with Duke Energy, and overall customer satisfaction with services provided by Duke Energy; and
3. Promoting other energy efficiency and demand response program options to residential customers.

## 2.2 Implementation

MyHER is implemented by Tendril Inc., a behavioral science and analytics contractor that prepares and distributes the MyHER reports according to a pre-determined annual calendar. Tendril also generates and disseminates the MyHER Interactive Portal content and email reports, energy savings tips, and energy savings challenges. Tendril and Duke Energy coordinate closely on the data transfer and preparation required to successfully manage the MyHER program, and they make adjustments as needed to provide custom tips and messages expected to reflect the characteristics of specific homes. A more detailed discussion of the roles and responsibilities of both organizations is provided in [Section 4](#).

### ***Eligibility***

The single-family MyHER program targets residential customers living in single-family, single meter, non-commercial homes with at least thirteen months of electricity consumption history. Approximately 1,174,000 DEC and 695,000 DEP residential customers met those requirements as of May 2018 and are assigned to the MyHER treatment groups. Accounts could still be excluded from the program for reasons such as the following: different mailing and service addresses and enrollment in payment plans based on income (although Equal Payment Plan customers are eligible). Eligibility criteria for the MyHER program have changed over time, and in some cases, customers were assigned to either treatment or control but later determined to be ineligible for the program. Nexant estimates that approximately 2% of assigned DEC customers and 1% of assigned DEP customers have been deemed ineligible for the program after having been assigned. Nexant addresses this topic by applying an intention-to-treat analysis (ITT); refer to [Section 3.1.2](#).

## 2.3 Key Research Objectives

The section describes our key research objectives and associated evaluation activities.

### 2.3.1 Impact Evaluation Objectives

The primary objective of the impact evaluation is to describe the impact of the program on energy consumption (kWh). Savings attributable to the program are measured across an average annual and monthly time period. The following research questions guided impact evaluation activities:

1. Is the process used to select customers into treatment and control groups unbiased?
2. What is the impact of MyHER on the uptake of other Duke Energy programs (downstream and upstream) in the market?
3. What net energy savings are attributable solely to MyHER reports after removing savings already claimed by Duke Energy's other energy efficiency programs?
4. What incremental savings are achieved by customers participating in the MyHER Interactive portal?

### 2.3.2 Process Evaluation Objectives

The program evaluation also seeks to identify improvements to the business processes of program delivery. Process evaluation activities focused on how the program is working and opportunities to make MyHER more effective. The following questions guided process data collection and evaluation activities:

1. Are there opportunities to make the program more efficient, more effective, or to increase participant engagement?
2. What components of the program are most effective and should be replicated or expanded?
3. What additional information, services, tips or other capabilities should MyHER consider?
4. Does MyHER participation increase customer awareness of their energy use and interest in saving energy?
5. What elements of the reports are useful to recipients?
6. How satisfied are recipients with MyHER reports?
7. To what extent does receiving MyHER increase customer engagement in energy saving behaviors and upgrades?
8. Do participants hold more favorable opinions of Duke Energy as a result of receiving the reports?
9. What encourages or prevents households from acting upon information or tips provided by MyHER?
10. To what degree are recipients aware of, and making use of, MyHER Interactive?
11. How can the program encourage additional action?

## 2.4 Organization of This Report

The remainder of this report contains the results of the impact analysis ([Section 3](#)); the results of the process evaluation activities, including the customer surveys ([Section 4](#)); and Nexant's conclusions and recommendations ([Section 5](#)).

## 3 Impact Evaluation

### 3.1 Methods

A key objective of the MyHER impact evaluation is to measure the change in electricity consumption (kWh) resulting from exposure to the normative comparisons and conservation messages presented in Duke Energy's My Home Energy Reports. The approach for estimating MyHER impacts is built into the program delivery strategy. Eligible accounts are randomly assigned to either a treatment (participant) group or a control group. The control group accounts are not exposed to MyHER in order to provide the baseline for estimating savings attributable to the Home Energy Reports. In this randomized controlled trial (RCT) design, the only explanation for the observed differences in energy consumption between the treatment and control group is exposure to MyHER.

The impact estimate is based on monthly billing data and program participation data provided by Duke Energy. The RCT delivery method of the program removes the need for a net-to-gross analysis as the billing analysis directly estimates the net impact of the program. After estimating the total change in energy consumption in treatment group homes, Nexant performed an "overlap analysis", which quantifies the savings associated with increased participation by treatment homes in other DEC or DEP energy efficiency offerings. These savings were claimed by other programs; therefore, they are subtracted from the MyHER impact estimates to eliminate double-counting.

#### 3.1.1 Data Sources and Management

The MyHER impact evaluation relied on a large volume of participation and billing data from Duke Energy's data warehouse. Nexant provided a data request for the necessary information in July 2018. Key data elements include the following:

- **Participant List** – a table listing each of the homes assigned to the MyHER program since its 2010 inception in DEC and its 2014 inception in DEP. This table also indicated whether the account was in the treatment or control group and the date the home was assigned to either group. Duke Energy also provided a supplemental table of Acxiom demographic data for program participants.
- **Billing History** – a monthly consumption (kWh) history for each account in the treatment and control group. Records included all months since assignment as well as the pre-assignment usage history required for eligibility. This file also included the meter read date and the number of days in each billing cycle.
- **MyHER Report History** – a record of the approximate 'drop date' of each MyHER report sent to the treatment group accounts, the messaging included, and the recommended actions. This dataset also contained a supplemental table of treatment group accounts omitted from each MyHER mailing during the evaluation period, and the associated reason for omission.

- **Participation Tracking Data for Other Energy Efficiency Programs offered by Duke Energy** – a table of the Duke DSM program participation of MyHER control and treatment group accounts. Key fields for analysis include the measure name, quantity, participation date, and net annual kWh and peak demand impacts per unit for each MyHER recipient and control group account participating in other DSM programs offered by Duke Energy.

In preparation for the impact analysis, Nexant combined and cleaned the participation and billing data provided by the MyHER program staff and then combined with the cleaned dataset from Nexant's prior MyHER impact evaluation for that jurisdiction.<sup>5</sup> The combined billing dataset includes 1,652,515 distinct DEC accounts and 1,011,440 distinct DEP accounts (the actual number varies by month). A number of treatment and control accounts in this dataset have closed prior to the start of this evaluation period (May 2016) and they have been dropped from the analysis dataset. For DEC, there were 306,131 such treatment customers and 126,142 such control customers. For DEP, there were 86,346 such treatment customers and 12,722 such control customers.

Nexant also removed the following accounts or data points from the analysis (total for DEC and DEP):

- 7,459 accounts that had a negative value for billed kWh;
- 710 records with unrealistically high usage: any month with greater than six times the 99<sup>th</sup> percentile value for daily kWh usage, or approximately 900 kWh per day.

Like most electric utilities, Duke Energy does not bill its customers for usage within a standard calendar month interval. Instead, billing cycles are a function of meter read dates that vary across accounts. Since the interval between meter reads vary by customer and by month, the evaluation team "calendarized" the usage data to reflect each calendar month, so that all accounts represent usage on a uniform basis. The calendarization process includes expanding usage data to daily usage, splitting the billing month's usage uniformly among the days between reads. The average daily usage for each calendar month is then calculated by taking the average of daily usage within the calendar month.

### 3.1.2 Intention to Treat

Duke Energy maintains a number of eligibility requirements for continued receipt of MyHER. Not all accounts assigned to treatment remained eligible and received MyHER over the study horizon. Several programmatic considerations can prevent a treatment group home from receiving MyHER in a given month. Common reasons for an account not being mailed include the following:

<sup>5</sup> Rather than re-requesting all of the data necessary for this evaluation (pre-treatment and posttreatment usage data for all treatment and control customers), Nexant omitted any data that we already had from the first evaluation – the pre-treatment data for cohorts included in our prior evaluation is still necessary for this current evaluation.

- **Mailing Address Issues** – mailing addresses are subjected to deliverability verification by the printer. If an account fails this check due to an invalid street name or PO Box or has another issue, the home will not receive the MyHER.
- **Implausible Bill** – if a home’s billed usage for the previous month is less than 150 kWh or greater than 10,000 kWh, Tendril does not mail the MyHER.
- **Insufficient Matching Households** – this filter is referred to as “Small Neighborhood” by Tendril and is a function of the clustering algorithm Tendril uses to produce the usage comparison. If a home can’t be clustered with a sufficient number of other homes, it will not receive the MyHER.
- **No Bill Received** – if Tendril does not receive usage data for an account from Duke within the necessary time frame to print and mail, the home will not receive MyHER for the month.

The Nexant data cleaning steps listed in [Section 3.1.1](#) do not impose these filters on the impact evaluation analysis dataset. This is necessary to preserve the RCT design because eligibility filters are not applied to the control group in the same manner as the treatment group. Instead, Nexant employed an “intention-to-treat” (ITT) analysis. In the ITT framework, the average energy savings per home *assigned* to the treatment is calculated via billing analysis. This impact estimate is then divided by the proportion of the treatment group homes analyzed that were active MyHER participants. The underlying assumption of this approach is all of the observed energy savings are being generated by the participating accounts.

Nexant relied on Duke Energy’s monthly participation counts for the numerator of the proportion treated calculation. MyHER program staff calculates participation monthly according to the business rules and eligibility criteria in place at the time. The denominator of the proportion treated is the number of treatment group homes with billed kWh usage for the bill month. This calculation is presented by month in Table 3-1 and Table 3-2 for the study period. The average proportion of assigned accounts that were treated during the period of June 2017 to May 2018 was 98% for both DEC and DEP.

**Table 3-1: DEC Calculation of Treatment Percentage by Bill Month**

Month	Treatment Homes Analyzed	DEC Participant Count	% Treated
06/2017	1,231,705	1,197,462	97%
07/2017	1,218,640	1,198,133	98%
08/2017	1,207,107	1,171,813	97%
09/2017	1,195,242	1,172,053	98%
10/2017	1,185,902	1,172,053	99%
11/2017	1,225,916	1,195,285	98%
12/2017	1,216,916	1,191,881	98%
01/2018	1,208,915	1,193,353	99%
02/2018	1,200,827	1,178,403	98%
03/2018	1,192,681	1,177,960	99%
04/2018	1,183,803	1,157,514	98%
05/2018	1,173,821	1,151,896	98%
<b>12-month Average Proportion</b>			<b>98%</b>

**Table 3-2: DEP Calculation of Treatment Percentage by Bill Month**

Month	Treatment Homes Analyzed	DEP Participant Count	% Treated
06/2017	727,455	682,040	94%
07/2017	719,693	713,994	99%
08/2017	712,653	701,172	98%
09/2017	705,487	700,125	99%
10/2017	699,920	700,125	100%
11/2017	726,344	710,313	98%
12/2017	720,920	707,899	98%
01/2018	715,954	708,355	99%
02/2018	711,221	697,726	98%
03/2018	706,614	698,443	99%
04/2018	701,195	693,815	99%
05/2018	695,352	689,886	99%
<b>12-month Average Proportion</b>			<b>98%</b>

The monthly participation counts shown in Table 3-1 and Table 3-2 were also used by Nexant to estimate the aggregate impacts of the MyHER. Per-home kWh savings estimates for each bill month are multiplied by the number of participating homes to arrive at the aggregate MWh impact achieved by the program.

### 3.1.3 Sampling Plan and Precision of Findings

The MyHER program was implemented as an RCT in which individuals were randomly assigned to a treatment (participant) group or a control group for the purpose of estimating changes in energy use because of the program. Nexant's analysis methodology relies on a census analysis of the homes in both groups so the resulting impact estimates are free of sampling error. However, there is inherent uncertainty associated with the impact estimates because random assignment produces a statistical chance that the control group consumption would not vary in perfect harmony with the treatment group, even in the absence of MyHER exposure. The uncertainty associated with random assignment is a function of the size of the treatment and control groups. As group size increases, the uncertainty introduced by randomization decreases, and the precision of the estimates improves.

Nexant's MyHER impact estimates are presented with both an absolute precision and relative precision. Absolute precision estimates are expressed in units of annual energy consumption (kWh) or as a percentage of annual consumption.

The two following statements about the MyHER impact analysis reflect absolute precision:

- DEC MyHER saved an average of 247.7 kWh per home during the 12-month period June 2017 to May 2018,  $\pm 16.0$  kWh. Homes in the treatment group reduced electric consumption by an average of 1.69%,  $\pm 0.11\%$ .
- DEP MyHER saved an average of 201.2 kWh per home during the 12-month period June 2017 to May 2018,  $\pm 18.9$  kWh. Homes in the treatment group reduced electric consumption by an average of 1.25%,  $\pm 0.12\%$ .

In these examples, the uncertainty of the estimate, or margin of error (denoted by " $\pm$ "), is presented in the same absolute terms as the impact estimate—that is, in terms of annual electricity consumption. Nexant also includes the relative precision of the findings. Relative precision expresses the margin of error as a percentage of the impact estimate itself. Consider the following examples:

- The average treatment effect of DEC MyHER during the 12-month period June 2017 to May 2018 is 247.7 kWh with a relative precision of  $\pm 6.4\%$ . In this case,  $\pm 6.4\%$  is determined by dividing the absolute margin of error by the impact estimate:  $16.0 \div 247.7 = 0.064 = 6.4\%$ .
- The average treatment effect of DEP MyHER during the 12-month period June 2017 to May 2018 is 201.2 kWh with a relative precision of  $\pm 9.4\%$ . In this case,  $\pm 9.4\%$  is determined by dividing the absolute margin of error by the impact estimate:  $18.9 \div 201.2 = 0.094 = 9.4\%$ .

All of the precision estimates in this report are presented at the 90% confidence level and assume a two-tailed distribution.

### 3.1.4 Assignment Cohorts and Equivalence Testing

The DEC and DEP MyHER program has been growing over time since its DEC launch in 2010 and DEP launch in 2014. Nexant mapped the DEC MyHER population into eight cohorts and DEP MyHER population into six cohorts. The cohort groupings are defined on a temporal basis, generally following the major periods when customers were assigned to treatment and control groups. Cohorts that had been defined in prior evaluations of the DEC and DEP programs were maintained for consistency.

Figure 3-1 shows the timeline of DEC program expansion by cohort since May 2016. The original pilot cohort started the program in April 2010 which was followed by a large expansion of customers who were added in 2012 and 2013, mainly in September 2012. A second large cohort was added in 2014 and 2015, mainly in December 2014. The program has continued to expand since 2015, in more modest increments relative to the 2012 - 2013 and 2014 - 2015 expansions, as newer customers met the program's eligibility criteria. In October 2015, Duke Energy also released a small number of DEC customers originally assigned to the control group into treatment from the April 2010, 2012 - 2013, and 2014 - 2015 cohorts. These cohorts are denoted with "Release" in Figure 3-1.<sup>6</sup> These customers were released into treatment starting in October 2015, and began producing impacts in November 2015.

**Figure 3-1: History of Cohort Assignments for DEC MyHER Program**

<sup>6</sup> Duke Energy commissioned a review of the MyHER control groups in 2015 to assess whether or not there were any control groups that were larger than necessary for the purpose of EM&V. Four relatively small releases (approximately 110,000 customers total) from the DEC jurisdiction was recommended by that review. Consequently, about 110,000 control group customers from the April 2010, September 2012, December 2014, and January 2015 cohorts were randomly selected for release into treatment.

Approximately 26% of DEC MyHER treatment customers were not assigned to the program simultaneously with a control group, and were bundled into cohorts with treatment customers assigned around the same time, consistent with the prior DEC evaluations. Nexant has advised Duke Energy to continue a simultaneous assignment protocol and to make assignments on an annual or biennial basis. Doing so will minimize any potential sources of bias that could occur due to a lack of simultaneous assignment to treatment and control.

Figure 3-2 shows the timeline of DEP program expansion by cohort since May 2016. A large original cohort started the program in December 2014. The program has continued to expand since 2014, in more modest increments relative to the original cohort, as newer customers met the program's eligibility criteria. In October 2015, Duke Energy also released a small number of DEP customers originally assigned to the control group into treatment from the December 2014 cohort. This cohort is denoted with "Release" in Figure 3-2.<sup>7</sup> These customers were released into treatment starting in October 2015, and began producing impacts in November 2015.

**Figure 3-2: History of Cohort Assignments for DEP MyHER Program**

Approximately 8% of DEP MyHER treatment customers were not assigned to the program simultaneously with a control group, and were bundled into cohorts with treatment customers assigned around the same time. These cohort definitions are consistent with those used in the previous evaluation. Simultaneous assignment will minimize any potential sources of bias that could occur due to a lack of simultaneous assignment to treatment and control.

Straightforward impact estimates are a fundamental property of the RCT design. Random assignment to treatment and control produces a situation in which the treatment and control

<sup>7</sup> Duke Energy commissioned a review of the MyHER control groups in 2015 to assess whether or not there were any control groups that were larger than necessary for the purpose of EM&V. A release of 60,000 customers from the DEP jurisdiction was recommended by that review. Consequently, about 60,000 control group customers from the December 2014 cohort were randomly selected for release into treatment.

groups are statistically identical on all dimensions prior to the onset of treatment; the only difference between the treatment and control groups is exposure to MyHER. The impact is therefore simply the difference in average electricity consumption between the two groups. The first step to assessing the impact of an experiment involving a RCT is to determine whether or not the randomization worked as planned.

Table 3-3 presents summary information for each of the eight cohorts included in Nexant's DEC analysis, comparing the average annual kWh usage of each cohort's treatment and control group for the 12 months prior to the beginning of assignment. On an annual basis, the pre-assignment usage is relatively balanced between groups for each of these cohorts, where the largest difference occurs in Cohort 5 ("2017").

**Table 3-3: DEC MyHER Cohort Summary Statistics**

Cohort		Pretreatment Period		# Homes		Annual kWh in Pretreatment Period	
		Start	End	Control	Treatment	Control	Treatment
1	Apr 2010	04/2009	03/2010	9,535	6,173	17,871	17,893
2	2012 - 2013	09/2011	08/2012	30,566	527,684	14,392	14,528
3	2014 - 2015	12/2013	11/2014	26,376	383,024	14,782	14,684
4	2016	06/2015	05/2016	19,848	61,332	13,324	13,402
5	2017	05/2016	04/2017	27,388	161,317	13,204	13,554
6	Apr 2010 Release	04/2009	03/2010	9,535	10,689	17,871	17,732
7	2012 - 2013 Release	09/2011	08/2012	30,566	85,505	14,392	14,486
8	2014 - 2015 Release	12/2013	11/2014	26,376	35,809	14,782	14,660

Since MyHER is evaluated on a month basis, the more important equivalency check is on month-to-month comparability between treatment and control groups. Figure 3-3 is a box-and-whisker plot of the average pre-treatment consumption for the treatment and control groups of DEC Cohort 2 ("2012 - 2013"), the largest treatment cohort of the DEC MyHER program. The figure depicts the distribution of monthly average consumption from September 2011 to August 2012, the time period prior to the launch of the cohort. This figure represents usage of all accounts assigned to treatment and control in this cohort. The plot illustrates that usage patterns of the treatment and control customers are grossly similar, however t-tests on the mean consumption for treatment and control groups reveals statistically significant differences between treatment and control customers during much of the pretreatment period. For example, the cohort shown in Figure 3-3 has statistically significant differences between treatment and control groups in 11 of 12 months in the year immediately prior to the onset of treatment. Across all eight DEC cohorts, the number of pretreatment months that show statistically different differences between treatment and control customers ranges from 0 to 12. These differences will need to be addressed by the estimation procedure, as we describe later in this section.

**Figure 3-3: DEC Difference in Average Pre-treatment Billed Consumption (kWh)**

Considering the DEP program, Table 3-4 presents summary information for each of the six cohorts included in Nexant's analysis, comparing the average annual kWh usage of each cohort's treatment and control group for the 12 months prior to the beginning of assignment. Here as in DEC, on an annual basis, the pre-assignment usage is relatively balanced between groups for each of these cohorts, where the largest difference occurs in Cohort 5 ("October 2017") which is the smallest cohort in terms of the number of both treatment and control customers.

**Table 3-4: DEP MyHER Cohort Summary Statistics**

Cohort		Pre-Period		# Homes		Annual kWh in Pre-Period	
		Start	End	Control	Treatment	Control	Treatment
1	Dec 2014	12/2013	11/2014	72,590	565,291	16,852	16,773
2	Dec 2015	12/2014	11/2015	8,086	24,482	14,826	14,628
3	Jun 2016	06/2015	05/2016	16,579	37,011	13,765	13,860
4	May 2017	05/2016	04/2017	7,102	94,947	15,121	15,060
5	Oct 2017	10/2016	09/2017	12,401	33,879	13,636	13,838
6	Dec 2014 Release	12/2013	11/2014	72,590	65,869	16,852	16,847

On a month-to-month basis, DEP's cohorts perform similarly to DEC's cohorts in terms of equivalence in treatment and control group usage. Figure 3-4 is a box-and-whisker plot of the average pre-treatment consumption for the treatment and control groups of DEP Cohort 1 ("December 2014"), the largest treatment cohort of the DEP MyHER program. The figure depicts the distribution of monthly average consumption from December 2013 to November 2014, the time period prior to the launch of the cohort. This figure represents usage of all accounts assigned to treatment and control in this cohort. As was the case for DEC, this largest of DEP cohorts grossly demonstrates monthly equivalence of treatment and control group usage, but the differences in mean monthly consumption are actually statistically significant for all 12 months of the year immediately preceding the onset of treatment. Across the six DEP cohorts, the number of months of the year immediately prior to the onset of treatment that treatment and control group usage is statistically different ranges from 0 to 12. These differences will need to be taken into account during estimation.

**Figure 3-4: DEP Difference in Average Pre-treatment Billed Consumption (kWh)**

### 3.1.5 Regression Analysis

Separating the MyHER population into cohorts accounts for cohort maturation effects and improves statistical precision relative to differences among the cohorts. Nevertheless, as discussed above, there are still small, but significant, underlying differences between the cohort treatment and control groups that need to be netted out via a difference-in-differences approach. Nexant applied a linear fixed effects regression (LFER) model to account for the month-to-month differences in electricity usage observed in the pre-treatment period between the treatment and control groups. The basic form of the LFER model is shown in [Equation 3-1](#). Average daily electricity consumption for treatment and control group customers is modeled using an indicator variable for the billing period of the study, a treatment indicator variable, and a customer-specific intercept term:

#### Equation 3-1: Fixed Effects Model Specification

$$\text{kWh}_{ity} = \text{customer}_i * \beta_i + \sum_{t=1}^{12} \sum_{y=2009}^{2018} I_{ty} * \beta_{ty} + \sum_{t=1}^{12} \sum_{y=2009}^{2018} I_{ty} * \tau_{ty} * \text{treatment}_{ity} + \varepsilon_{ity}$$

Table 3-5 provides additional information about the terms and coefficients in [Equation 3-1](#).

**Table 3-5: Fixed Effects Regression Model Definition of Terms**

Variable	Definition
$\text{kWh}_{ity}$	Customer i's average daily energy usage in billing month t of year y
$\text{customer}_i$	An indicator variable that equals one for customer i and zero otherwise. This variable models each customer's average energy use separately.
$\beta_i$	The coefficient on the customer indicator variable. Equal to the mean daily energy use for each customer.
$I_{ty}$	An indicator variable equal to one for each monthly billing period t, year y and zero otherwise. This variable captures the effect of each billing period's deviation from the customers' average energy use over the entire time series under investigation.
$\beta_{ty}$	The coefficient on the billing period t, year y indicator variable.
$\text{treatment}_{ity}$	The treatment variable. Equal to one when the treatment is in effect for the treatment group. Zero otherwise. Always zero for the control group.
$\tau_{ty}$	The estimated treatment effect in kWh per day per customer in billing month t of year y; the main parameter of interest.
$\varepsilon_{ity}$	The error term.

Nexant estimated the LFER model separately for each of the randomized cohorts included in the analysis for each jurisdiction. Detailed regression outputs can be found in [Appendix A](#). The model specification includes an interaction term between the treatment indicator variable and the indicator variable for the bill month term. This specification generates a separate estimate of the MyHER daily impact for each month.

Table 3-6 illustrates the calculation of monthly impact estimates from the regression model coefficients for homes in the DEC 2012 - 2013 cohort (DEC Cohort 2). The monthly savings shown in Table 3-6 are the unweighted point estimates for that cohort. Each month's average

treatment effect is multiplied by an assumed number of days in the month equal to  $365.25/12 = 30.4375$ .

**Table 3-6: Impact Calculation Example – DEC Cohort 2**

Month	Daily Treatment Coefficient ( $\tau$ )	Monthly Impact (kWh)
06/2017	-0.2310	-7.0
07/2017	0.1645	5.0
08/2017	0.1487	4.5
09/2017	-0.5932	-18.1
10/2017	-0.4416	-13.4
11/2017	-1.1360	-34.6
12/2017	-1.9676	-59.9
01/2018	-1.0220	-31.1
02/2018	-1.2419	-37.8
03/2018	-1.2941	-39.4
04/2018	-1.0254	-31.2
05/2018	-0.6825	-20.8
<b>12-month Total</b>		<b>-283.7</b>

Impact estimates by cohort were combined for each month using a weighted average where the weighting factor is the number of homes with billing data that had been assigned to the treatment group during a prior month (e.g., were in the post-treatment period). These estimates of the average MyHER impact per assigned home were then divided by the proportion of customers treated, as shown in Table 3-1 and Table 3-2, to estimate the average treatment effect per participating home.

### 3.1.6 Dual Participation Analysis

The regression model outputs and subsequent intention-to-treat adjustments discussed in [Section 3.1.5](#) produce estimates of the total change in electricity consumption in homes exposed to MyHER. Some portion of the savings estimated by the regression is attributable to the propensity of MyHER treatment group homes to participate in other energy efficiency offerings at Duke Energy at a greater rate than control group homes. The primary purpose of the dual participation analysis is to quantify annual electricity savings attributable to this incremental DSM participation and subtract it from the MyHER impact estimates. This downward adjustment prevents savings from being double-counted by both the MyHER program and the program where savings were originally claimed.

A secondary objective of the dual participation analysis is to better understand the increased DSM participation, or “uplift” triggered by inclusion of marketing messages within MyHER. The ability to serve as a marketing tool for other DSM initiatives is an important part of what makes MyHER attractive as Duke Energy assumes the role of a trusted energy advisor with its customer base.

Duke Energy EM&V staff provided Nexant with a dataset of non-MyHER program participation records for the MyHER treatment and control group homes dating back to January 2015. This dataset included nearly 439,000 records of efficient measure installations by the MyHER treatment and control group and formed the basis of Nexant’s dual participation analysis.

Table 3-7 and Table 3-8 shows the distribution of participation and savings during the 12-month period June 2017 to May 2018 across DEC and DEP’s residential portfolio, respectively.

**Table 3-7: DEC Total EE Program Participation among MyHER Customers**

Program Name	Number of Records	Net MWh/year	Net kW/year
DE Residential EE Products & Services	181,353	36,612	12,092
DE Smart Saver Residential	243,630	152,553	31,754
Residential Energy Assessments	13,584	15,457	2,530
<b>Total</b>	<b>438,567</b>	<b>204,622</b>	<b>46,376</b>

**Table 3-8: DEP Total EE Program Participation among MyHER Customers**

Program Name	Number of Records	Net MWh/year	Net kW/year
DEP Home Energy Improvement	17,585	5,435	1,429
DEP Neighborhood Energy Saver	2,534	1,144	174
DEP New Construction Program	30	1	1
DEP ResEE Multi-Family	4,739	1,172	118
DEP Residential Energy Assessment	10,494	11,758	1,955
DEP Single Family Water Measures	115,504	30,605	10,199
DEP Smart Saver Residential	8,672	11,021	4,297
<b>Total</b>	<b>159,558</b>	<b>61,137</b>	<b>18,173</b>

The MyHER dual participation analysis included the following steps:

- Match the data to the treatment and control homes by Account ID
- Assign each transaction to a bill month based on the participation date field in the tracking data
- Exclude any installations that occurred prior to the home being assigned to the treatment or control group

- Calculate the daily net energy savings for each efficiency measure
- Sum the daily net energy impact by Account ID for measures installed prior to each bill month
- Calculate the average savings per day for the treatment and control groups by bill month. This calculation is performed separately for each cohort
- Calculate the incremental daily energy saved from energy efficiency (treatment – control) and multiply by the average number of days per bill month (30.4375)
- Take a weighted average across cohorts of the incremental energy savings observed in the treatment group
- Subtract this value from the LFER estimates of treatment effect for each bill month

Table 3-9 shows the dual participation calculations, by bill month, for homes in the DEC 2012 – 2013 Cohort (DEC Cohort 2). Savings from energy efficiency measures climb steadily over time in both groups as additional efficient technologies are installed through Duke Energy's residential energy efficiency portfolio. The treatment group's impacts increase at a slightly greater rate, so the incremental energy savings subtracted from the MyHER treatment effect generally grows as a cohort's duration of exposure lengthens.

**Table 3-9: Incremental Energy Efficiency Savings Calculation Example – DEC Cohort 2**

Month	Mean Daily EE kWh Impact (Control)	Mean Daily EE kWh Impact (Treatment)	Incremental Daily kWh from EE (Treatment – Control)	Uplift %	Incremental kWh Savings
06/2017	0.354	0.381	0.027	7.6%	0.82
07/2017	0.369	0.395	0.026	7.2%	0.80
08/2017	0.384	0.412	0.028	7.3%	0.85
09/2017	0.406	0.435	0.029	7.1%	0.88
10/2017	0.428	0.459	0.031	7.2%	0.94
11/2017	0.445	0.476	0.031	7.0%	0.95
12/2017	0.459	0.492	0.033	7.2%	1.01
01/2018	0.477	0.511	0.034	7.2%	1.04
02/2018	0.488	0.523	0.035	7.1%	1.06
03/2018	0.506	0.540	0.034	6.7%	1.04
04/2018	0.527	0.561	0.034	6.5%	1.05
05/2018	0.541	0.576	0.035	6.5%	1.06
<b>12-month Total</b>					<b>11.51</b>

While the incremental participation rate of the treatment group in other EE programs is modest when considered in total, increased uptake of measures immediately following promotional messaging within MyHER mailers could be much more dramatic. Each MyHER issued has space for one product promotion message that is used to market other Duke Energy programs

or initiatives. Duke Energy provided Nexant with records of the exact messages received by each home. Table 3-10 and Table 3-11 show the number of homes that received each combination of messages for the DEC and DEP MyHER cycles from this evaluation period.

**Table 3-10: DEC MyHER Promotional Messaging by Month**

## 3.2 Impact Findings

### 3.2.1 Per-home kWh and Percent Impacts

Nexant estimates the average participating DEC MyHER home saved 247.7 kWh of electricity from June 2017 to May 2018. This represents a 1.69% reduction in total electricity consumption compared to the control group over the same period. The average DEP MyHER home saved 201.2 kWh of electricity from June 2017 to May 2018, which represents a 1.25% reduction in electricity consumption. These estimates reflect an upward adjustment to account for the intention-to-treat methodology and a downward adjustment to prevent double-counting of savings attributable to incremental participation of treatment groups in Duke Energy's energy efficiency programs.

Table 3-12 and Table 3-13 show the impact estimates in each bill month for the average home assigned to treatment in DEC and DEP, respectively. The table also shows the subsequent adjustment to account for the fact that only a subset of homes assigned to treatment was actively participating in MyHER during the study period.

**Table 3-12: DEC MyHER Impact Estimates with ITT Adjustment, before EE Overlap Adjustment**

Month	Treatment Homes Analyzed	DEC Participant Count	kWh impact in Assigned Homes	% Treated	kWh Impact in Treated Homes
06/2017	1,231,705	1,197,462	8.7	97%	9.0
07/2017	1,218,640	1,198,133	3.6	98%	3.7
08/2017	1,207,107	1,171,813	4.0	97%	4.1
09/2017	1,195,242	1,172,053	14.5	98%	14.7
10/2017	1,185,902	1,172,053	15.3	99%	15.5
11/2017	1,225,916	1,195,285	27.0	98%	27.6
12/2017	1,216,916	1,191,881	36.8	98%	37.6
01/2018	1,208,915	1,193,353	30.4	99%	30.7

05/2018	1,173,821	1,151,896	20.5	98%	20.9
<b>12-month Total</b>			<b>248.9</b>	<b>98%</b>	<b>253.6</b>

**Table 3-13: DEP MyHER Impact Estimates with ITT Adjustment, before EE Overlap Adjustment**

Month	Treatment Homes Analyzed	DEP Participant Count	kWh impact in Assigned Homes	% Treated	kWh Impact in Treated Homes
06/2017	727,455	682,040	18.3	94%	19.5
07/2017	719,693	713,994	17.2	99%	17.4
08/2017	712,653	701,172	19.5	98%	19.8
09/2017	705,487	700,125	4.1	99%	4.1
10/2017	699,920	700,125	-6.1	100%	-6.1
11/2017	726,344	710,313	19.3	98%	19.7
12/2017	720,920	707,899	31.2	98%	31.8
01/2018	715,954	708,355	29.2	99%	29.5
02/2018	711,221	697,726	21.4	98%	21.8
03/2018	706,614	698,443	15.5	99%	15.6
04/2018	701,195	693,815	16.3	99%	16.5
05/2018	695,352	689,886	17.4	99%	17.6
<b>12-month Total</b>			<b>203.3</b>	<b>98%</b>	<b>207.2</b>

An adjustment factor of 5.95 kWh per home for DEC and 6.02 kWh per home for DEP is applied to MyHER impact estimates in Table 3-14 to arrive at the final net verified program impact per home. [Section 3.2.6](#) provides additional detail on the calculation of the adjustment for overlapping participation in other Duke EE programs.

**Table 3-14: MyHER Impact Estimates Net of EE Overlap**

Jurisdiction	Time Period	kWh Savings in Treated Homes	Incremental kWh from EE Programs	Net MyHER Impact Estimate	Control Group Usage (kWh)	Percent Reduction
DEC	June 2017 - May 2018	253.6	5.95	247.7	14,658	1.69%
DEP	June 2017 - May 2018	207.2	6.02	201.2	16,137	1.25%

### 3.2.2 Aggregate Impacts

The total impact of the MyHER program in each service territory is calculated by multiplying the per-home impacts (adjusted for ITT and incremental EE participation) for each bill month by the number of participating homes. Over the 12-month period June 2017 to May 2018, DEC MyHER participants conserved 292.2 GWh of electricity, while DEP MyHER participants conserved 141.1 GWh. The aggregate impacts presented in Table 3-15 and Table 3-16 are at the meter

level so they do not reflect line losses which occur during transmission and distribution between the generator and end-use customer.

**Table 3-15: DEC MyHER Aggregate Impacts**

Month	DEC Participant Count	kWh Net Impact	GWh Net Impact
06/2017	1,197,462	8.5	10.2
07/2017	1,198,133	3.2	3.8
08/2017	1,171,813	3.6	4.2
09/2017	1,172,053	14.1	16.6
10/2017	1,172,053	14.8	17.4
11/2017	1,195,285	27.3	32.6
12/2017	1,191,881	37.2	44.3
01/2018	1,193,353	30.3	36.2
02/2018	1,178,403	30.2	35.6
03/2018	1,177,960	31.9	37.6
04/2018	1,157,514	26.2	30.3
05/2018	1,151,896	20.4	23.5
<b>12-month Total</b>		<b>247.7</b>	<b>292.2</b>

**Table 3-16: DEP MyHER Aggregate Impacts**

Month	DEP Participant Count	kWh Net Impact	GWh Net Impact
06/2017	682,040	19.1	13.0
07/2017	713,994	16.9	12.1
08/2017	701,172	19.3	13.6
09/2017	700,125	3.6	2.5
10/2017	700,125	-6.6	-4.6
11/2017	710,313	19.2	13.6
12/2017	707,899	31.3	22.1
01/2018	708,355	29.0	20.5
02/2018	697,726	21.3	14.9
03/2018	698,443	15.1	10.6
04/2018	693,815	16.0	11.1
05/2018	689,886	17.1	11.8
<b>12-month Total</b>		<b>201.2</b>	<b>141.1</b>

### 3.2.3 Precision of Findings

The margin of error of the per-home impact estimate is  $\pm 16.0$  kWh for DEC and  $\pm 18.9$  kWh for DEP at the 90% confidence interval. Nexant clustered the variation of the LFER model by

Account ID to produce a robust estimate of the standard error associated with treatment coefficients. The standard normal z-statistic for the 90% confidence level of 1.645 was then used to estimate the uncertainty associated with each cohort estimate. This uncertainty was then aggregated across cohorts to quantify the precision of the program-level impacts estimates (Table 3-17 and Table 3-18).

**Table 3-17: 90% Confidence Intervals Associated with DEC MyHER Impact Estimates**

Parameter	Lower Bound (90%)	Point Estimate	Upper Bound (90%)
Evaluation Period Savings per Home (kWh)	231.7	247.7	263.6
Percent Reduction	1.58%	1.69%	1.80%
Aggregate Impact (GWh)	273.4	292.2	311.0

**Table 3-18: 90% Confidence Intervals Associated with DEP MyHER Impact Estimates**

Parameter	Lower Bound (90%)	Point Estimate	Upper Bound (90%)
Evaluation Period Savings per Home (kWh)	182.3	201.2	220.1
Percent Reduction	1.13%	1.25%	1.36%
Aggregate Impact (GWh)	127.9	141.1	154.3

For DEC, the absolute precision of the result is  $\pm 0.11\%$  and the relative precision of  $\pm 6.4\%$  at the 90% confidence level. For DEP, the absolute precision of the result is  $\pm 0.12\%$  and the relative precision of  $\pm 9.4\%$  at the 90% confidence level.

### 3.2.4 Impact Estimates by Cohort

The per-home impact estimates shown in Table 3-15 and Table 3-16 reflect a weighted average impact across the eight cohorts of DEC MyHER customers analyzed and the six cohorts of DEP MyHER customers analyzed. The impact estimates for the individual cohorts varied across the study period. Table 3-19 and Table 3-20 show point estimates for each cohort during the period June 2017 to May 2018 for DEC and DEP, respectively. Three released cohorts for DEC and one release cohort for DEP were added to treatment in October 2015 and began producing impacts in November 2015.

**Table 3-19: DEC Annual kWh Impact Estimates by Cohort**

Month	Monthly Average Impact							
	Apr 2010	2012 - 2013	2014 - 2015	2016	2017	Apr 2010 Release	2012 - 2013 Release	2014 - 2015 Release

05/2018	-21.1	-6.8	-22.1	-0.9	-17.9	-8.3
<b>12 Month Total</b>	<b>-248.8</b>	<b>-118.1</b>	<b>-171.8</b>	<b>-92.1</b>	<b>74.9</b>	<b>-123.4</b>

For DEC, cohorts 1, 2, and 3 (April 2010, 2012 - 2013, and 2014 - 2015) show the greatest impacts and are also the oldest cohorts. Cohort 2 is the largest cohort and contains roughly 44% of analyzed treatment customers. For DEP, cohorts 1 and 3 (December 2014 and June 2016) show the greatest impacts. Cohort 1 is the largest cohort in DEP and contains about 71% of analyzed treatment customers.

Table 3-21 and Table 3-22 show the margin of error at the 90% confidence level for each cohort's annual impact estimate for DEC and DEP, respectively. The combined margin of error for the entire program is lower than the error for any single cohort because the combined program impact estimate is based on a larger pool of customers. Individual cohort margins of error are high for the small cohorts due to the sizes of these groups relative to the underlying variation in consumption among the treatment and control groups constituting each cohort.

**Table 3-21: DEC 90% Confidence Intervals Associated with Cohort Savings Estimates**

Cohort	Margin of Error in kWh at 90% Confidence Level	Lower Bound (kWh)	Point Estimate (kWh)	Upper Bound (kWh)
Apr 2010	± 194	-468	-275	-81
2012 - 2013	± 72	-356	-284	-212
2014 - 2015	± 65	-340	-275	-210
2016	± 86	-243	-157	-71
2017	± 67	-237	-170	-102
Apr 2010 Release	± 166	-346	-180	-15
2012 - 2013 Release	± 83	-213	-130	-48
2014 - 2015 Release	± 94	-281	-187	-93

**Table 3-22: DEP 90% Confidence Intervals Associated with Cohort Savings Estimates**

Cohort	Margin of Error in kWh at 90% Confidence Level	Lower Bound (kWh)	Point Estimate (kWh)	Upper Bound (kWh)
Dec 2014	± 49	-298	-249	-199
Dec 2015	± 148	-266	-118	30
Jun 2016	± 105	-277	-172	-67
May 2017	± 144	-236	-92	52
Oct 2017	± 70	5	75	145
Dec 2014 Release	± 67	-191	-123	-56

### 3.2.5 Seasonal Trends

There is a clear seasonal pattern to the DEC and DEP MyHER savings profiles. DEC and DEP customers both consistently experience the greatest reductions in winter and the smallest,

sometimes negative, reductions in summer. The green series in Figure 3-5 and Figure 3-6 show the average estimated monthly treatment effect for the program in each bill month from May 2016 to May 2018. The blue series in Figure 3-5 and Figure 3-6 show the average control customer's load during the same period of time. Even though annual electricity consumption for customers in both service territories is clearly bimodal (with peaks in both the summer and winter), MyHER impacts are not.

**Figure 3-5: DEC Average kWh Savings by Month**

**Figure 3-6: DEP Average kWh Savings by Month**

Based on the observed savings trends, MyHER is realizing the greatest impacts in the winter and shoulder months, with the lowest impacts in the summer months. Seasonal trends in

MyHER average treatment effects likely reflect customers' differing abilities to respond by season. For example, winter heating demand can be mitigated by dressing more warmly, using more blankets in the home, or shutting off lights more often (there are fewer hours of daylight in the winter than the summer). The summer impacts still occur but the conservation options, and potentially willingness to conserve on cooling, options available to customers are fewer.

### 3.2.6 Uplift in Other Duke Energy Programs

Section 3.1.6 outlined the methodology Nexant used to calculate the annual kWh savings attributable to increased participation in other Duke Energy programs. Table 3-23 presents the downward adjustment per home that was applied to impacts in order to avoid double-counting savings from June 2017 to May 2018. For DEC, the uplift was determined to be 5.95 kWh per home, or 7.0 GWh in aggregate. For DEP, the uplift was determined to be 6.02 kWh per home, or 4.2 GWh in aggregate.

**Table 3-23: Monthly Adjustment for Overlapping Participation in Other EE Programs**

Month	DEC Incremental kWh from Other EE Programs	DEP Incremental kWh from Other EE Programs
06/2017	0.52	0.46
07/2017	0.52	0.48
08/2017	0.56	0.49
09/2017	0.60	0.53
10/2017	0.64	0.56
11/2017	0.40	0.52
12/2017	0.43	0.49
01/2018	0.45	0.49
02/2018	0.45	0.50
03/2018	0.45	0.50
04/2018	0.46	0.50
05/2018	0.46	0.50
<b>12 Month Total</b>	<b>5.95</b>	<b>6.02</b>

Although these additional savings must be subtracted from the MyHER effect to prevent double-counting, the MyHERs clearly played an important role in harvesting these savings.

Table 3-24 and Table 3-25 show the average daily energy savings attributable to tracked energy efficiency measures as of May 2018 by cohort and calculates an uplift percentage. In nearly every case the treatment group showed a higher propensity to adopt measures through Duke Energy programs than the control group.

**Table 3-24: DEC Uplift Percentage by Cohort**

	Cohort	Monthly Net kWh Savings from EE (Treatment Group)	Monthly Net kWh Savings from EE (Control Group)	Uplift Percentage
1	Apr 2010	18.7	17.7	6.2%
2	2012 - 2013	14.6	13.7	7.0%
3	2014 - 2015	15.2	14.6	3.9%
4	2016	28.1	27.3	2.9%
5	2017	18.1	19.4	-6.4%
6	Apr 2010 Release	17.9	17.7	1.6%
7	2012 - 2013 Release	14.0	13.7	2.3%
8	2014 - 2015 Release	13.8	14.6	-5.3%

**Table 3-25: DEP Uplift Percentage by Cohort**

	Cohort	Monthly Net kWh Savings from EE (Treatment Group)	Monthly Net kWh Savings from EE (Control Group)	Uplift Percentage
1	Dec 2014	9.3	8.7	6.76%
2	Dec 2015	9.2	8.0	13.98%
3	Jun 2016	9.8	9.1	7.64%
4	May 2017	7.8	7.8	0.14%
5	Oct 2017	6.9	7.2	-4.90%
6	Dec 2014 Release	9.1	8.7	4.93%

### 3.2.7 Duration of Exposure

Home energy report evaluations in North America consistently find a trend of increasing savings with length of treatment. Since the prior evaluation, Nexant has estimated impacts for three new cohorts in both service territories. The bulk of the cohorts were added to the DEC and DEP programs in June 2016, May 2017, and October 2017. In DEC, the newest cohorts (Cohorts 4 and 5) make up 15% of the treatment population by May 2018. In DEP, the newest cohorts (3, 4, and 5) make up 19% of the treatment population by May 2018. Figure 3-7 and Figure 3-8 compare the overall results with the results of the average customer who is not in one of the three newest cohorts for DEC and DEP, respectively. The older cohorts consistently realize higher impacts than their newer counterparts.

**Figure 3-7: DEC Comparison of Average Customer Savings to the Savings of the Older Program Participants**

**Figure 3-8: DEP Comparison of Average Customer Savings to the Savings of the Older Program Participants**

Figure 3-9 displays the annual savings by the number of years a cohort has been in the program. A general upward trend of savings occurs with longer exposure to treatment, however some exceptions are visible. The oldest cohort, which has been in treatment since 2010, shows lower impacts than those in earlier years of treatment. It should be noted that there are few program implementations of home energy report programs with durations in excess of five years and there is less information about what should be expected from implementations of that vintage. Additionally, with less than 6,000 treatment customers in this cohort, it is now one of the smallest cohorts in DEC. It is reasonable to expect the newer cohorts' impacts to increase with maturation of the cohorts, however the 2010 cohort's performance may be indicative of the existence of a point peak maturation after which mature impacts cannot be sustained. A literature review of home energy report programs in North America with participants exposed to treatment for eight years or more would be valuable to benchmark the performance of Duke Energy's oldest MyHER cohorts.

**Figure 3-9: Annual Savings by Duration of Exposure**

### 3.3 MyHER Interactive Portal

Nexant also evaluated the incremental energy savings generated by Duke Energy's enhancement to the standard MyHER report. Duke Energy launched the MyHER Interactive Portal in March 2015. The portal offers additional means for customers to customize or update Duke Energy's data on their premises, demographics, and other characteristics that affect consumption and MyHER's classification of each customer.

The portal provides additional custom tips based on updated data provided by the customer. MyHER Interactive also sends weekly email challenges that seek to engage customers in active energy management, additional efficiency upgrades, and conservation behaviors. Nexant evaluated the impacts of the MyHER Interactive Portal using a matched comparison group because MyHER Interactive is not deployed as a randomized controlled trial (RCT).

#### 3.3.1 Estimation Procedures for MyHER Interactive

A matched comparison group is a standard approach for establishing a counterfactual baseline when there is no random assignment to treatment and control. The goal of matching estimators is to estimate impacts by matching treatment customers to similar customers that did not participate in the program. The key assumption to matched comparison approaches is that MyHER Interactive participants closely resemble non-participants, except for the fact that one of these two groups participated in the program while the other did not. When a strong comparison

group is established, evaluators can reliably conclude that any differences observed after enrollment are due to program's stimulus. In using a matched comparison group to estimate energy savings due to exposure to MyHER Interactive, the same statistical modeling approach is used to estimate energy savings impacts as was used for estimating energy savings for the program overall (i.e., with linear fixed effects regression (LFER) estimation).

Duke Energy provided Nexant with MyHER participant enrollment information for the Interactive portal. A total of 38,190 DEC and 19,510 DEP MyHER treatment customers signed up to use the portal. For DEC, 13,523 of the 38,190 Interactive users signed into the portal more than once, and 6,880 signed in more than twice between December 2014 and May 2018. For DEP, 6,983 of the 19,510 Interactive users signed into the portal more than once, and 3,575 signed in more than twice between March 2015 and May 2018. The average DEC and DEP MyHER Interactive user has logged in to Interactive 2.6 times.

In order for the LFER regression model to generate monthly energy savings attributable to Interactive, the customer data that the regression model uses to make the estimates must use a year of exposure to MyHER reports prior to enrolling in Interactive. For DEC, 11,101 of the Interactive users (29%) had sufficient data available for the LFER analysis before their Interactive enrollment. 4,286 Interactive users (22%) in DEP had sufficient data to be included in the LFER analysis. Figure 3-10 and Figure 3-11 plot the total number of customers enrolled in MyHER Interactive as well as the subset in the analysis for each month of the 12-month period June 2017 to May 2018 for DEC and DEP, respectively.

**Figure 3-10: DEC MyHER Interactive Portal Enrollment**

**Figure 3-11: DEP MyHER Interactive Portal Enrollment**

For DEC, many of the Interactive customers used in the estimation analysis were matched on their 2017 billing usage, but some customers who enrolled in Interactive at earlier points in time were matched on their 2014, 2015, or 2016 usage. Figure 3-12 presents the pre-treatment consumption for MyHER Interactive customers and a matched comparison group comprised of MyHER customers that have not enrolled in Interactive for the DEC customers matched on 2017 usage. The matching approach generates two groups with nearly identical consumption patterns over the time period prior to customers' enrollment in MyHER Interactive. On average, the difference in monthly usage between the matched control group and the DEC Interactive treatment group is -0.6% for the 2014 match, 0.4% for the 2015 match, 0.1% for the 2016 match, and 0.0% for the 2017 match. The fixed effects model specification Nexant applies controls for these pre-treatment differences, as discussed earlier in [Section 3.1.5](#).

**Figure 3-12: DEC MyHER Interactive Portal Customers and Matched Comparison Group – 2017 Pre-Interactive Enrollment Periods**

For DEP, most of the Interactive customers used in the estimation analysis were matched on their 2017 billing usage, but some customers who enrolled in Interactive earlier were matched on their 2015 or 2016 usage. Figure 3-13 presents the pre-treatment consumption for MyHER Interactive customers and a matched comparison group comprised of MyHER customers that have not enrolled in Interactive for the DEP customers matched on 2017 usage. The matching approach generates two groups with nearly identical consumption patterns over the time period prior to customers' enrollment in MyHER Interactive. On average, the difference in monthly usage between the matched control group and the DEP Interactive treatment group is 0.3% for the 2015 match, -0.2% for the 2016 match, and 0.1% for the 2017 match. The fixed effects model specification Nexant applies controls for these pre-treatment differences, as discussed earlier in [Section 3.1.5](#).

**Figure 3-13: DEP MyHER Interactive Portal Customers and Matched Comparison Group – 2017 Pre-Interactive Enrollment Periods**

### 3.3.2 Results and Precision

For DEC, the average monthly impact across the 12-month period June 2017 to May 2018 was 21.3 kWh or 255.1 kWh annually per customer, representing the uplift in savings that MyHER Interactive produces over and above the savings produced by the paper MyHER, and this impact is significant at the 90% level of confidence. In aggregate, the DEC MyHER Interactive Portal resulted in 7.38 GWh of annual savings, incremental to the MyHER reports. These high-level findings are summarized in Table 3-26.

**Table 3-26: 90% Confidence Intervals Associated with DEC MyHER Interactive Impact Estimates**

Parameter	Lower Bound (90%)	Point Estimate	Upper Bound (90%)
Evaluation Period Savings per Home (kWh)	41.4	255.1	468.8
Percent Reduction	0.27%	1.65%	3.02%
Aggregate Impact (GWh)	0.99	7.38	13.77

On a month-to-month basis, energy impacts were statistically significant during the months of April, May, June, August, September, October, November, and December and range from 0.6% to 2.6%, or from 9 to 36 kWh on an absolute basis.

Figure 3-14 illustrates average monthly energy usage for the DEC MyHER Interactive users (the blue line) and the same for the matched control group (the green line), along with the estimated impact and 90% confidence band (the orange lines and orange dashed lines) by month. Also shown as blue bars are counts of Interactive sign-ups.

**Figure 3-14: DEC MyHER Interactive Portal Energy Impacts**

Table 3-27 provides impact model results for DEC, along with the margin of error for estimated impacts. The column at the right side of the table shows asterisks for those months where the energy savings are statistically significant at the 90% level of confidence.

**Table 3-27: DEC MyHER Interactive Monthly Energy Savings**

Month	Number of Participants Analyzed	MyHER Interactive Signups	Daily kWh			90% Conf. Interval		% Impact	
			Non-Participants	Participants	Impact				
Jun-17	4,993	270	44.9	43.8	1.2	0.6	1.8	2.6%	*
Jul-17	5,075	420	52.1	51.5	0.6	0.0	1.3	1.2%

Apr-18	10,628	1,515	32.7	32.1	0.6	0.2	1.1	2.0%	*
May-18	11,101	1,316	39.4	38.8	0.6	0.1	1.1	1.6%	*
<b>Average</b>	<b>7,590</b>	<b>1,297</b>	<b>42.5</b>	<b>41.8</b>	<b>0.7</b>	<b>0.5</b>	<b>0.9</b>	<b>1.6%</b>	*

For DEP, the average monthly impact across the 12-month period June 2017 to May 2018 was 8.7 kWh, representing the uplift in savings that MyHER Interactive produces over and above the savings produced by the paper MyHER, but this estimate is not statistically significant at the 90% level of confidence. On a month-to-month basis, energy impacts were statistically significant only during June, which represented an impact of 4.2%, or 60 kWh on an absolute basis.

Figure 3-15 illustrates average monthly energy usage for the DEP MyHER Interactive users (the blue line) and the same for the matched control group (the green line), along with the estimated impact and 90% confidence band (the orange lines and orange dashed lines) by month. Also shown as blue bars are counts of Interactive sign-ups.

Table 3-28 provides impact model results for DEP, along with the margin of error for estimated impacts. The column at the right side of the table shows asterisks for those months where the energy savings are statistically significant at the 90% level of confidence. Impacts for DEP were only significant for June 2016, but not for the remaining months or for the year June 2017 through May 2018 overall.

**Figure 3-15: DEP MyHER Interactive Portal Energy Impacts**

**Table 3-28: DEP MyHER Interactive Monthly Energy Savings**

Month	Number of Participants Analyzed	MyHER Interactive Signups	Daily kWh			90% Conf. Interval		% Impact
			Non-Participants	Participants	Impact			
Jun-17	494	150	48.9	46.9	2.0	0.8	3.3	4.2%
Jul-17	505	213	55.2	53.5	1.6	-0.1	3.4	3.0%

Apr-18	3,900	1,015	36.3	36.8	-0.5	-1.1	0.1	-1.4%
May-18	4,286	754	43.0	43.0	0.0	-0.6	0.7	0.0%
<b>Average</b>	<b>1,711</b>	<b>837</b>	<b>46.7</b>	<b>46.5</b>	<b>0.3</b>	<b>-0.6</b>	<b>1.1</b>	<b>0.6%</b>

Nexant concludes that the DEC MyHER Interactive portal succeeded in generating additional statistically significant savings during much of the evaluation period from June 2017 to May

2018. The DEP MyHER Interactive portal only achieved additional statistically significant savings in the evaluation period during June 2017.

### 3.4 Impact Conclusions and Recommendations

Nexant's impact evaluation shows that Duke Energy's MyHER program continues to trigger a reduction in electric consumption among homes exposed to the program messaging.

MyHER programs also demonstrate an apparent maturation effect, typically on the order of 1-2 years. If Duke Energy continues to consistently introduce new cohorts to the program, program management should generally expect the newest cohorts to underperform relative to the established cohorts. Currently, 15% of DEC and 19% of DEP program participants should be considered as not fully mature.

Additionally, the findings from this evaluation suggest that savings of fully mature cohorts may eventually plateau or degrade over time – the oldest DEC cohort is in its 8<sup>th</sup> year on the program and displays impacts comparable to other cohorts that are in their second or third year on the program.

We find that MyHER also causes an uplift in participation in other energy efficiency programs. We have deducted the energy savings associated with that uplift so that Duke Energy does not claim the delivery of energy reductions associated with that uplift twice – those energy savings have already been claimed by those energy efficiency programs. This uplift in energy efficiency program participation means that MyHER is delivering on its secondary goal to encourage participation in other programs. We also find that the Interactive web portal has begun to show statistically significant energy savings in DEC, but not yet in DEP.

Nexant provides the following recommendations for Duke Energy's consideration:

- **Continue the commitment to simultaneous control and treatment assignment.** New assignments to treatment and control groups must be simultaneous and Tendril and Duke Energy should work to add all newly assigned treatment and control groups to their respective statuses in a single billing month, to the extent that is technically feasible.
- **Continue the practice of making assignments of new accounts to MyHER treatment and control groups once a year, or at most, twice a year.** The numbers of Duke Energy customers becoming eligible for the program each year do not facilitate more frequent assignments. This is due to the fact that sufficient numbers of customers must be set aside for the control group each time a group of customers is assigned to treatment in order for the evaluator to be able to measure the energy savings delivered by the new cohort.
- **Continue to drive engagement with the Interactive Portal.** MyHER Interactive's ability to deliver measurable energy savings is on the rise, as shown by this evaluation in comparison to the prior DEC evaluation, as well as the MyHER evaluations for other Duke Energy jurisdictions completed in the past year. We recommend that Duke Energy continue to drive more MyHER participants to the portal.

## 4 Process Evaluation

This section presents the results of process evaluation activities including in-depth interviews with Duke Energy and implementation staff and surveys of control and treatment households.

### 4.1 Methods

Process evaluations support continuous program improvement by identifying opportunities to improve the effectiveness and efficiency of program operations and services. Process evaluations also identify successful program components that should be enhanced or replicated. Process evaluation activities for MyHER sought to document program operational processes and to understand the experience of those receiving MyHER mailings. The customer survey given to MyHER recipients focused on investigating the recall and influence of MyHER messages among recipients, the extent to which MyHER affects customer engagement and satisfaction with Duke Energy, their use of MyHER Interactive, and subsequent actions taken by participants to reduce household energy consumption. A survey of control group households provided a point of comparison for estimating the effect of MyHER on behavior and attitudes of treatment households.

#### 4.1.1 Data Collection and Sampling Plan

The process evaluation included two primary data collection activities: in-depth interviews with program management and implementation staff, and surveys of a random sample of households selected to receive MyHER reports as well as surveys of a random sample of control group households.

Nexant deployed the household surveys using a mixed-mode survey measurement protocol, the activities associated with which are summarized in Table 4-1 and Table 4-2. In this protocol, customers were contacted by letter on Duke Energy stationery (to assure recipients of the legitimacy of the survey) asking them to go online and complete the survey. The letter contained a two-dollar bill as a cost-effective measure to maximize the survey completion rates. The letter also included a personalized URL for the online survey that points the recipient to a unique location on the internet at which they were able to complete the survey. Customers for whom email addresses were available also received an email inviting them to take the survey online, which also included the same personalized URL that appeared in the letter leading to the survey website at the location where they could complete it. After two weeks, customers who did not respond to the web survey received another letter, this time containing a paper copy of the survey and a return postage-paid envelope asking them to complete the survey by mail. Survey recipients also had the option of calling a toll-free telephone number to complete the survey by telephone. Table 4-1 shows that 337<sup>8</sup> DEC treatment customers and 211 DEC control customers completed the survey, totaling 548 responses from DEC recipients. Two samples of

<sup>8</sup> 337 total DEC treatment respondents is the sum of 153 and 184 DEC completes by treatment sample.

treatment customers were used to accommodate an expanded set of questions used for comparison with control customers. A treatment-only survey was sent to a second sample of treatment customers that only contained questions specific to the MyHER experience. This approach to using a second treatment-only instrument was taken to prevent the treatment version of the survey from becoming too long. Among the 337 DEC treatment customers that completed the survey, 153 were in the sample that received the treatment-only survey and 184 were in the sample that received the primary instrument designed to compare the responses of treatment and control customers. A total of 211 DEC control customers completed the survey. By state, 420 DEC respondents are located in North Carolina and 128 DEC respondents are located in South Carolina.

**Table 4-1: Summary of Process Evaluation Activities - DEC**

Population	Approach	Population	Sample		Confidence/Precision	
			Expected	Actual	Expected	Actual
Program management and implementation	In-depth interviews	~10	2-5	4	Not Applicable	Not Applicable
Treatment group households; Treatment only instrument	Mixed-mode; mail, web, and phone	~1.4 M	188	153	90/6	90/6.7
Treatment group households; Primary instrument	Mixed-mode; mail, web, and phone	~1.4 M	188	184	90/6	90/6.0
Control group households; Primary instrument	Mixed-mode; mail, web, and phone	~133,000	188	211	90/6	90/5.7
<b>Total Responses</b>			<b>564</b>	<b>548</b>		

Table 4-2 shows that a total of 539 DEP customers responded to the survey. The DEP survey design was identical to that of DEC, with two treatment samples receiving surveys; one sample received surveys with only treatment-related questions, and the other sample of treatment customers received another survey with questions designed to compare the responses of treatment and control customers. A total of 192 DEP control customers completed the survey, while 171 DEP treatment customers completed the treatment-only survey, and 176 DEP treatment customers completed the primary comparison survey. By state, 473 DEP respondents reside in North Carolina and 29 DEP respondents reside in South Carolina.

**Table 4-2: Summary of Process Evaluation Activities - DEP**

Population	Approach	Population	Sample		Confidence/Precision	
			Expected	Actual	Expected	Actual
Program management and implementation	In-depth interviews	~10	2-5	4	Not Applicable	Not Applicable
Treatment group households; Treatment only instrument	Mixed-mode; mail, web, and phone	~842,000	186	171	90/06	90/6.3
Treatment group households; Primary instrument	Mixed-mode; mail, web, and phone	~842,000	186	176	90/06	90/6.2
Control group households; Primary instrument	Mixed-mode; mail, web, and phone	~117,000	186	192	90/06	90/5.9
<b>Total Responses</b>			<b>558</b>	<b>539</b>		

Nexant's survey instruments included demographic questions to support comparisons of the treatment and control respondents as well as to support overall comparisons to the jurisdiction's territory. We present summaries of the responses to the demographic questions in [Section 4.2](#), after the summaries of the responses to the survey questions on customer attitudes, energy usage behaviors, energy-savings actions and purchases/investments, and experience with the MyHER program.

#### 4.1.1.1 Interviews

Nexant conducted interviews with key contacts at Duke Energy and Tendril. The interviews built upon information obtained during previous evaluations of the Duke Energy MyHER program in multiple jurisdictions. The central objectives of the interviews were to understand program operations and the main activities required to develop and distribute the MyHER reports to DEP and DEC customers, as well as to understand any developments or enhancements in program delivery.

#### 4.1.1.2 Household Surveys

Both treatment and control groups were surveyed. Treatment households were surveyed as two groups that received different surveys: The first group's survey included questions about the respondents' experience of the reports themselves as well as questions to assess engagement and understanding of household energy use, awareness of Duke Energy efficiency program offers, and satisfaction with the services Duke Energy provides to help households manage

their energy use. The second treatment group and control group surveys were identical, and excluded questions about the information and utility of the MyHER reports, but included identical questions on the other aspects to facilitate comparison with each other, as well as to the first treatment group.

Nexant analyzed the survey results to identify differences between treatment and control group households on the following:

- Reported levels of stated intention for future action;
- Levels of awareness of and interest in household energy use;
- The level of behavioral action or equipment-based upgrades;
- Satisfaction with Duke Energy communications, service, and efficiency options;
- Barriers to energy saving behaviors and purchases; and
- Inclination to seek information on managing household energy use from Duke Energy.

This survey approach is consistent with the RCT design of the program and supports both the impact and process evaluation activities by providing additional insight into potential program effects.

### ***Survey Disposition - DEC***

We mailed 553 letters to randomly selected residential customers in the treatment group and 553 letters to the randomly selected residential customers in the control group for the primary survey. We also mailed 553 letters to the treatment customers for the treatment-only survey. The surveys were completed by a total of 337 treatment households (across both surveys) and 211 control households, representing a an overall treatment group response rate of 30% for DEC and a control group response rate of 38%. More than half (69% of the treatment group and 66% of the control group) of the surveys were completed online. Table 4-3 summarizes the treatment and control group survey dispositions in DEC.

**Table 4-3: Survey Disposition - DEC**

Mode	Treatment		Control	
	Count	Percent	Count	Percent
<b>Completes by Mode</b>				
Web-based Survey	232	69%	140	66%
Mail/Paper Survey	88	26%	58	27%
Inbound Phone Survey	17	5%	13	6%
<b>Total Completes</b>	<b>337</b>	<b>100%</b>	<b>211</b>	<b>100%</b>

Table 4-4 presents DEC response rates by state. Higher response rates are observed in both North and South Carolina for control customers relative to treatment customers. In North Carolina, 30% of treatment customers invited to take the survey completed it, as compared to a

36% response rate for control customers in North Carolina. South Carolina response rates were a bit higher: 31% of treatment customers in South Carolina and 45% of control customers in South Carolina completed the survey.

**Table 4-4: Response Rates by State and Treatment Condition - DEC**

State	Treatment			Control		
	Sampled	Completed	Response Rate	Sampled	Completed	Response Rate
North Carolina	866	262	30%	435	158	36%
South Carolina	240	75	31%	118	53	45%
<b>Total</b>	<b>1,106</b>	<b>337</b>	<b>30%</b>	<b>553</b>	<b>211</b>	<b>38%</b>

#### ***Survey Disposition - DEP***

We mailed 552 letters to randomly selected residential customers in the treatment group and 552 letters to the randomly selected residential customers in the control group for the primary survey. We also mailed 552 letters to the treatment customers for the treatment-only survey. The surveys were completed by 347 treatment households (across both surveys) and 192 control households, representing a treatment group response rate of 31% and a control group response rate of 35%. More than half (63% of the treatment group and 61% of the control group) of the DEP surveys were completed online. Table 4-5 outlines the treatment and control group survey dispositions in DEP.

**Table 4-5: Survey Disposition - DEP**

Mode	Treatment		Control	
	Count	Percent	Count	Percent
<b>Completes by Mode</b>				
Web-based Survey	220	63%	117	61%
Mail/Paper Survey	104	30%	67	35%
Inbound Phone Survey	23	7%	8	4%
<b>Total Completes</b>	<b>347</b>	<b>100%</b>	<b>192</b>	<b>100%</b>

Table 4-6 summarizes DEP response rates by state and treatment condition. In North Carolina, 32% of treatment customers invited to take the survey completed it, as compared to a 35% response rate for control customers in North Carolina. South Carolina DEP response rates were on the whole a bit lower: 29% of treatment customers in South Carolina and 32% of control customers in South Carolina completed the survey.

**Table 4-6: Response Rates by State and Treatment Condition - DEP**

State	Treatment			Control		
	Sampled	Completed	Response Rate	Sampled	Completed	Response Rate
North Carolina	976	310	32%	462	163	35%
South Carolina	128	37	29%	90	29	32%
<b>Total</b>	<b>1,104</b>	<b>347</b>	<b>31%</b>	<b>552</b>	<b>192</b>	<b>35%</b>

## 4.2 Findings

This section presents the findings from in-depth interviews with staff and implementation contractors and the results of the customer surveys.

### 4.2.1 Program Processes and Operations

As in other Duke Energy jurisdictions, MyHER at DEP and DEC is managed primarily through a core team of three Duke Energy staff members: a Manager of Behavioral Programs with oversight of residential behavioral programs, a Program Manager in charge of the day-to-day operations of the MyHER program, and a Data Analyst that is responsible for the substantial data tracking and cleaning tasks required to support the contracted implementation team, as well as internal program reporting to Duke Energy management.

At Tendril, Duke Energy's contracted program implementer, MyHER is supported by a team of people including an Operations Manager, a Home Energy Report Product Manager, an Engineering Manager, a dedicated Operations Engineer, a Quality Control Engineer, an "Ask-the-Expert" technical writer, and an Account Manager responsible for ensuring that the Duke Energy MyHER products meet expectations for quality, timing, and customer satisfaction. Tendril staff track the number of reports sent, the quality of the reports, and the timing of when reports are mailed. Tendril's key performance indicators (KPIs) include in-home dates for each batch as well as the percentage of treatment customers actually treated.

MyHER is Duke Energy's flagship behavioral energy efficiency program. Its primary goals are to achieve energy savings, increase customer satisfaction, and cross-promote enrollment into Duke Energy's demand response and energy efficiency programs. Staff at both organizations described continuous, close coordination to ensure that the data behind the MyHER comparisons are accurate, the tips provided to specific households are appropriate, and that MyHERs are delivered as soon as possible after billing data is received, within the relatively short timeframe between bills.

Program operations are conducted with a customer-focused orientation where the commitment to producing a high-quality product is a demanding process that must be executed consistently each month of the year.

#### 4.2.1.1 MyHER Production

During the period of time under study by this evaluation, MyHERs were mailed out to DEP and DEC customers on paper through the U.S. Mail service about eight times a year, where the mailing gaps generally occurred in January, April, September, and December. During the eight U.S. Mail treatment months, the reports are generated twice per week, a cadence that is designed to facilitate meeting one of Tendril's key performance indicators: that MyHERs arrive at the customers' homes at the cycle's mid-point (though, ideally, as soon as possible after the bill), so as to make the information presentment as useful and timely as possible. Additionally, any customer that has provided Duke Energy with their email address also receives their report by email, and in fact, MyHER reports are generated and emailed to those customers monthly, 12 times a year, while they continue to receive paper reports 8 times a year.<sup>9</sup>

The production process for any given treatment month begins as soon as meter reads for the first billing cycle are processed by Duke Energy's meter data management system. After processing, billing data is uploaded each afternoon, five times a week, to Tendril. Once the data has been received, production proceeds according to the following process, twice a week<sup>10</sup>: Tendril runs report production and conducts quality control checks. Then a flat file containing all the data from the reports in addition to drafts of every report (in PDF format) are sent to Duke Energy for an independent quality control check. Upon approval, Tendril then sends the PDFs to the printhouse, and the printhouse generates a final proof for Duke Energy approval. Finally, after the proof is approved, the printhouse prints and mails all the reports, Tendril emails eHERs on the specified day, and then commences the process of reporting the printing, mailing, and emailing to Duke Energy. There have been issues, however, in the iterative process of reconciling customer email addresses between Duke Energy and Tendril that has resulted in the loss of updated customer emails. There is interest in automating the email update process, but in the meantime in order to avoid further problems, Duke Energy is simply sending Tendril updates quarterly.

This production chain moves quickly: once Tendril generates a batch of reports, the time elapsed until transfer to the printhouse is generally 3-4 hours when all processes are completed according to plan. This timeframe has become the norm, but when quality control problems emerge, that elapsed time can increase significantly. Considering that the printhouse has one week to complete the mailing, and Standard Rate postage can take another week to deliver, making the mid-cycle in-home delivery goal something that takes dedicated effort to achieve.

Prior MyHER process evaluations in other Duke Energy jurisdictions where MyHER is also implemented found that this fast-moving process has seen improvements over time through the adoption of various changes: recently, these have been best characterized by an increased attention to developing procedures and schedules for a number of elements of the MyHER production process. These elements include the Duke Energy product request list, new quality

<sup>9</sup> Duke Energy will cease delivery of paper MyHER reports, and only send email reports, if the customer requests them to do so.

<sup>10</sup> During the months where only eHERs are produced, reports are generated in one batch per week, rather than two.

control processes at Tendril, and free form text (FFT) content development, as examples. These changes continue to deliver improvements in the number of problems found during report batch quality control checks, though Tendril continues to have some difficulty dealing with last minute requests from Duke Energy. Additionally, Tendril has implemented a number of back office process enhancements in the past year, such as migrating their computational platform to Amazon Web Services (AWS), providing a pre-promotion (i.e., draft) platform to enable Duke Energy staff to review draft PDF reports prior to promoting or finalizing them, and converting their email HER reports to Hypertext Markup Language (HTML) format which provides greater responsiveness and flexibility to Tendril operational staff.

#### **4.2.1.2 Quality Control**

Embedded in the early days of this production cycle is a quality control process that is undertaken to ensure that the reports contain accurate information and are of high quality. Duke Energy analyzes a dataset containing all of the information presented in the reports for each production cycle. This data is checked for essentially anything that could be erroneous, ranging from verifying that all the customers receiving reports are eligible to receive them, that no control customers are getting reports, that the reported electricity usage is correct, that no customers who have opted-out are getting reports, and that no one has gotten more than one report a month. Duke Energy also checks for unexpected cluster assignment changes, presentment of messaging and tips and overall print quality.

In the past, these checks have proven to be crucial as they occasionally revealed significant production problems, which were subsequently reviewed in Tendril's governance sessions with Duke Energy. This visibility has typically resulted in issue resolution on a going-forward basis.

Both Duke Energy and Tendril staff report that the incidence of significant production problems has also been dramatically reduced since Tendril implemented quality control automation. Issues that surfaced during this evaluation period were small in scope, and infrequent. In 6 months, roughly 20 incidents were identified by Duke Energy that required Tendril to remove errors it had missed in their initial round of quality control. Tendril's automated quality control process is described as follows, recalling that customer data is transferred to Tendril daily:

- Tendril pulls the Duke Energy billing data into a database (Amazon Redshift; part of the AWS suite) and organizes it in a way that allows it to be fed into the HERs. The HERs are then generated and rendered;
- The QC protocol, which is a set of SQL queries against the data, then runs. This process produces output (presented in Amazon S3; another part of the AWS suite) that reports the results of the checks, indicating the reports that were incorrectly created. Postfiltering is then done for the incorrect reports;
- Tendril staff execute visual checks to be sure nothing noticeable or significant has slipped through to final report presentment; and
- An approved file is then sent to Duke Energy, along with about 100 samples of both paper and electronic HERs.

This automated process has the added benefit of being able to be managed by one person, which has significantly reduced the problems that the “all hands on deck” approach to executing report production and quality control presented in the past.

Prior evaluations of MyHER revealed that some program processes could benefit from improved quality control performance. Improved quality control in these areas can reduce the risk associated with running a program with processes that too often fail quality control checks. Such issues present timing risks (reports may not be sent out on time), customer service risk (reports may be sent out with problems if problems someday are missed), and risk to the overall success of the program (if the QC process is overburdened with detecting too many problems, it can become an overly-leveraged component of program operations). Interviews for this evaluation revealed continued improvement since the prior DEC and DEP evaluations in terms of frequency and significance of issues detected by Duke Energy’s quality control processes.

Tendril is currently implementing a new production platform, the Home Energy Reporting Service (HOMERS), that will allow for the production of reports for multiple billing cycles at once, which will dramatically improve the production process by, notably, eliminating what are referred to as “Batch 1” problems, which are related to the relatively large number of reports produced for the first cycle of the month. Data transfers to Duke will contain much smaller and consistent batch sizes. Additionally, this new platform allows for the continuous importation of customer usage data and production of reports. This will make preventing problems easier because it allows the QC software to be programmed in a way that can verify the proper execution of customer segmentation protocols, as well as larger scale descriptive analyses at a frequency chosen by Tendril, as opposed to having to wait for the entire batch run, as is the case with the legacy system. The development of this new platform is currently near completion at Tendril, and is expected to not only detect emergent problems, but also help prevent detected errors from recurring.

The improvements described above are likely a function of the continuation of Duke Energy and Tendril’s collaborative activities for program success. Duke Energy and Tendril staff join for weekly status meetings, monthly operations meetings, and quarterly governance meetings. These meetings provide a venue for shared brainstorming and roadmapping activities and the ongoing maintenance of a product request list for Tendril. Tendril has additionally commissioned an internal HER Improvement Team with the mandate to make consistent progress on the product request list. This team meets quarterly to reassess the feasibility of each of the list’s items (currently numbering about 25) and reprioritize these items, as needed, based on the priorities Duke Energy has expressed in collaborative meetings. Making progress on this list, for which Tendril produces quarterly reports, has been made a priority by Duke Energy and has resulted in the above described attention in meetings. In general, this prioritization has resulted in 3 items on this list being accomplished in the last quarter.

Duke Energy and Tendril staff have recognized in prior evaluations of Duke Energy’s MyHER program in other jurisdictions, as well as this one, that production problems, when they occur, usually occur following changes to the report or report cycle process. However, our interviewees

also recognized that a strength of Tendril lies in their willingness to dive deep into details and processes to solve problems that may only affect a relatively few number of customers, and to go the extra mile to help address problems that in fact may have originated on the Duke Energy side. Interviews for this evaluation additionally reveal that the Tendril operations team has stabilized in terms of staffing, and that Tendril has added a quality control engineer to program staff. Tendril has also implemented a “Batch 0” strategy where the first batch of reports following any changes to the report is produced not for distribution, but only for quality control purposes, which is reviewed prior to the production of any live batches of reports. This procedural innovation allows Tendril to support Duke Energy’s interest in fine-tuning any new features or changes to reports and to facilitate early detection of unexpected problems. Generally, both Duke Energy and Tendril staff continue to speak highly of the collaborative partnership shared by Duke Energy and Tendril in running the MyHER program and of the open lines of communication that exist and function very well at all levels of program and corporate management.

#### **4.2.1.3 MyHER Components**

MyHER reports include several key elements that are customized each month: bar charts, tips, a trend chart, and messages. Duke Energy and Tendril implemented a general refresh of the MyHER report template in 2017, designed to improve readability and to keep the presentation fresh in the eyes of recipients. Graphics were updated and images were added to some modules (described below) that were previously text-only. A new module (also described below) was added that presents usage disaggregated by end use type. Overall, recipient response to this redesign was positive, though program staff did note some difficulty recipients had with interpreting the disaggregated end use presentation.

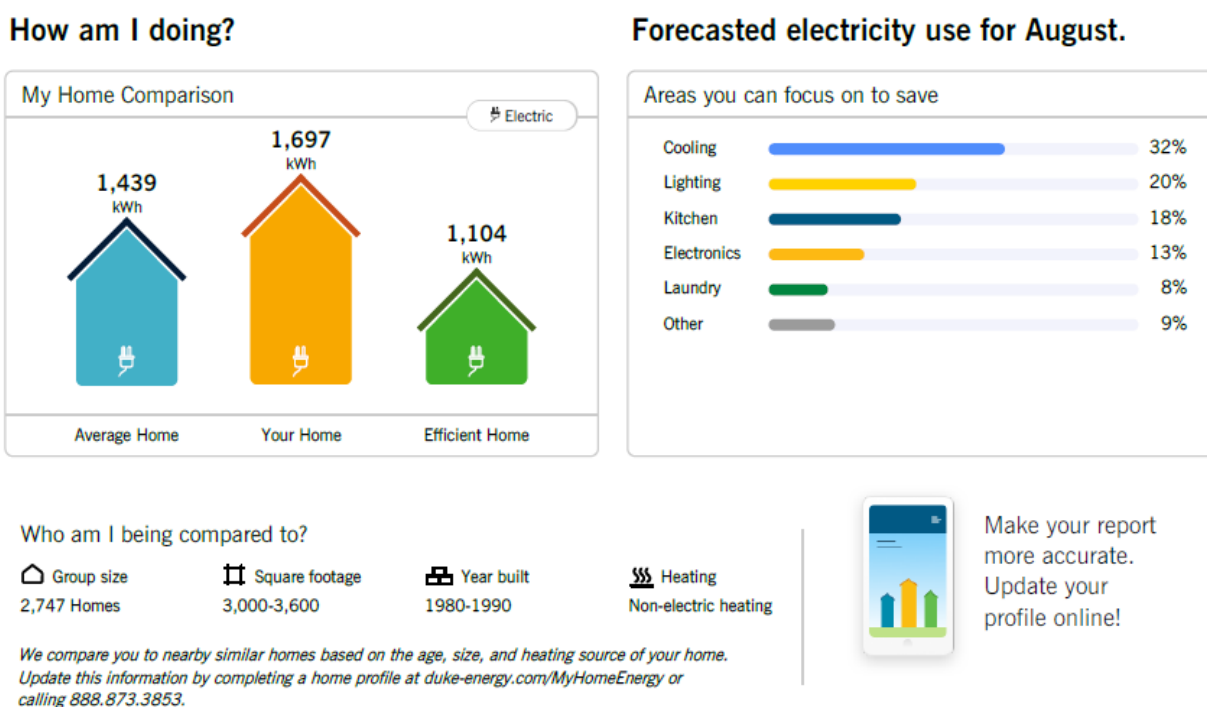

The front page includes two bar chart graphics. The first chart is a vertical bar chart (stylized in the shape of homes) comparing the subject home to the average and most efficient homes for an assigned cluster or “neighborhood” of similar homes. Previously, in Duke Energy jurisdictions with the earliest MyHER program implementations, these graphs were labeled with dollars, but this occasionally caused confusion among recipients if the dollar amount didn’t exactly match their recall of a recent bill. In March 2013, Duke Energy shifted to using kWh as the unit of measurement for the bar charts; Duke Energy conducted customer focus groups in an effort to understand the level of confusion this shift might cause and found that customers reported not paying attention to unit of measurement: they were simply absorbing the shape and directionality of the bar charts (Figure 4-1).

An infographic beneath the bar charts provides the size of the group of comparison homes, the assumed heating type, the approximate square footage, and the approximate age of the similar homes to which the customer’s home is being compared. According to MyHER staff, a common reason for customer phone calls relating to MyHERs is simply the customer’s desire to correct assumed information about a given home. For example, the MyHER could indicate that Duke Energy assumes a home has electric heat when it does not, or has assigned a home to the wrong size category. Any corrections provided in this manner are considered highly reliable and are not changed based on subsequent uploads of third party data.

To the right of the vertical bar chart is a horizontal bar chart that illustrates Tendril's forecast for subject home's electricity usage in the next month, disaggregated by end use type. This chart is intended to provide actionable insights to each customer as to where they might direct their energy savings efforts to make the greatest impact in their energy usage in the month ahead. Tendril staff continues to fine-tune the disaggregation in these forecasts, as a response to customer concerns about the accuracy of this component of the report. To help improve their accuracy, Duke Energy and Tendril continue to push customers to the Interactive portal where they are able to further customize or correct information about their homes that may impact the accuracy of the disaggregated usage forecasts.

**Figure 4-1: MyHER Electricity Usage Comparison and Forecasted Energy Use Bar Charts**

In addition to the comparison graph, each MyHER includes a set of customized action tips under the heading “How can I save more?” (Figure 4-2). These tips are designed to provide information relevant to homes with similar characteristics, as presented in the box accompanying the comparison graph. These tips often are presented with monetary values (appropriately scaled to each customer receiving the tip) that estimate the bill savings that the customer might expect to realize by implementing the action tip.

The Duke Energy MyHER program has a large library of action tips, numbering between 80 and 90. Half of them were initially developed internally at Duke Energy, and Tendril’s “Ask the Expert” technical writer has continued to add to them over time. The large library has enabled the program to avoid any repeats to customers over lengthy periods of time (up to three years). Tip freshness is also managed with display rules that ensure that a diversity of tip types (both in the value of the tip and the area of the household they apply to) is shown, and this management sometimes results in the removal of tips that staff no longer deem relevant. Duke Energy

validates the monetary values estimated by Tendril for each tip action for reasonableness. Duke Energy and Tendril have identified an opportunity for improvement with action tips in developing additional targeting algorithms for tip display. For example, more sophisticated targeting could be developed that cross-references age of home with relevancy for certain actions (e.g., only display a tip to install new windows to customers with older homes). This targeting of tips in this section are developing into “smart actions”, and have been established as a priority at both Duke Energy and Tendril. Tendril has made progress on, converting about 20% of all action tips to smart actions—that is, they are targeted to the appropriate audience. However, not all of the actions and tips in this section are amenable to being used in this fashion, as there is significant variability in their applicability: some tips are only applicable to a few segments, while others have broader customer applicability and have lower capacity to be used as a “targeted” action.

**Figure 4-2: MyHER Tips on Saving Money and Energy**

**How can I save more?**

 <p><b>Every little bit helps!</b></p> <p><b>Dry your dishes, and save</b></p> <p>Is your dishwasher letting off steam at your expense? Most dishwashers use up to 15% of their energy for DRYING your dishes. Why pay for that? Instead of using the heated drying cycle, choose "energy saver" or "economy" mode. The hot water will evaporate quickly... and save you money in the process.</p>	 <p><b>Save up to \$56 per year.</b></p> <p><b>Unplug your second refrigerator or freezer</b></p> <p>Most backup refrigerators are at least 10 years old and use a LOT of energy. Many just hold extra drinks or get used during parties. Sound familiar? Consider only plugging yours in when you really need it. You'll be surprised at how much energy you can save. Better yet, why not retire that second fridge altogether?</p> <p> More Savings Tips at <a href="https://duke-energy.com/homereport">duke-energy.com/homereport</a></p>
---	--

The back page of the MyHER reports includes a trend chart that displays how the recipient’s home compares to the average and efficient home in energy usage over a year (Figure 4-3). This trend chart can help customers identify certain months where their usage increased relative to the efficient or average home—helping them focus on the equipment and activities most likely to affect their usage. For example, if a home tracks the average home until mid-winter and then spikes well above, that could indicate the heating equipment should be checked.

Figure 4-3: MyHER 13-month Trend Chart

The back page of the MyHER report also reserves space for Duke Energy to include seasonal and programmatic messaging, referred to by program staff as free form text (FFT), that reflects Duke Energy-specific communication objectives. Ensuring that FFT messages are relevant and do not conflict with the actions or tips provided on the front page requires ongoing coordination and monitoring. Broad targeting efforts taking advantage of seasonal relevance, program eligibility, and the presence of end uses such as pools, are used to cross-promote Duke Energy programs. Customer participation databases are cross checked each month to ensure that customers only receive information about programs they have not already participated in; if a customer is found to have participated in the program being promoted in a given month, that customer will receive an alternate, typically more generic, message. Occasionally the action text on the front page will be disabled to accommodate FFT messaging.

FFT messages are developed by the MyHER team in cooperation with Duke Energy's marketing and communications group. Duke Energy staff strive to develop messages that are clever, relevant, and upbeat—some recognize events on the calendar (such as Earth Day) while others provide specific program promotional information or promote general home upgrades (even for measures outside of current programs).

Establishing an FFT calendar early in each year and attempting to avoid last-minute changes to the messages each month has been challenging to implement. Last minute changes have been common due to changes during the course of the year to Duke Energy program promotions and incentive levels. In addition to developing the messages included in each MyHER, the program team must also ensure that the messages conform to expectations established to protect the customer experience. This feature of MyHER is relatively resource-intensive with a lengthy revision-review-approval process with numerous stakeholders accompanying most changes to FFT messages.

To help prevent last minute changes that characterized FFT production in the past, there was renewed focus and energy on prioritizing it as much as possible in 2018 at both Tendril and

Duke Energy. A product of this renewed energy is an FFT tool under development at Tendril. It will allow for faster and more accurate rendering of FFT messaging, as well as the ability for Duke Energy stakeholders to participate directly in the FFT creation and review process; it is being built as a “self-serve” tool. The implementation of such a tool, due for launch in early 2019, is expected to streamline the FFT process significantly.

Finally, the back page of the reports also provides contact information for the MyHER program at Duke Energy. Customers occasionally contact Duke Energy with questions or concerns about MyHERs and, rarely, to opt-out. Duke Energy’s efforts to maintain a high-quality MyHER customer experience is reflected by the high value that is placed on program participant satisfaction and as such, it is closely monitored. Only 1% of MyHER customers contact Duke Energy annually and less than 0.5% of MyHER treatment customers contact Duke Energy to opt-out. The rigorous quality control efforts described earlier have kept quality-related issues from ever reaching customers.

#### **4.2.1.4 MyHER Interactive**

Enrollment in MyHER Interactive is still relatively low. The most reliably successful enrollment generators are email campaigns, sweepstakes, and cross-promotion with the High Bill Alerts program. Envelope messaging has also been used, but is less successful. Email campaigns are a very successful enrollment generator because they can use personalized uniform resource locator PURLs (to enable clicking through to the Interactive screen where the customers’ account number is auto-populated in the registration process). Program staff revamped the content and graphics of the email campaign in 2018.

Duke Energy continues to prioritize enrollment in Interactive. However, enrollment in MyHER Interactive was not as strong as was hoped, so Tendril is developing a marketing plan to increase enrollments in 2019.

Additionally, Duke Energy has 6 product requests in with Tendril for the “User Profile” section of MyHER Interactive, so as to improve the quality of customer-provided data and in turn, improve clustering models, load disaggregation, the applicability of targeted tips, and other applications that use the data. Duke Energy also continues to roll out AMI meters to customers in the DEC and DEP service territories. With the completion of the AMI deployment, the granularity of customer data will increase, which will directly benefit those who enroll in MyHER Interactive. Currently, about 57% of Interactive customers have AMI meters. For these customers, their usage data is available on MyHER Interactive. However, there have been problems with the transfer of this data to Tendril, which has caused some customer data displays to be erroneous. To remedy this, Tendril is in the process of upgrading their data ingester<sup>11</sup>. Duke Energy and Tendril are considering ways to effectively utilize and meaningfully leverage AMI data.

<sup>11</sup> Data ingestion refers to the process of importing, cleaning, and organizing large or complex sets of data for storage and/or analysis. Tendril’s upgraded data ingester will process AMI data from Duke Energy in a faster, more effective manner.

Few quality control or process issues pertaining to Interactive were reported in our interviews. However, it should be noted that there is currently no mechanism by which Duke Energy can use or check the quality of data presented on Interactive in a systematic or bulk fashion. All checks are made on an individual customer basis. The bulk of quality control for Interactive is carried out by Tendril.

One opportunity for improvement exists in MyHER Interactive's limitation such that a Duke Energy account can only be associated with one email, and only one email may be associated with any account. Currently, Tendril is evaluating the feasibility of a number of solutions to this problem, which has caused issues for customers attempting to enroll. First, they are attempting to shorten the time it takes to archive emails of customers who leave the program (to disassociate the email from the account). Secondly, they are exploring the possibility of allowing more than one email to be associated with an account. Lastly, they may disable the requirement that login ID's be email addresses. These solutions should open up eligibility to accounts associated with homes in ownership transition, rental transition, and will allow those who own more than one home to have all of their homes associated with their Interactive account.

#### **4.2.1.5 Other MyHER Plans to Further Improve Program Operations**

Looking forward, Duke Energy and Tendril are also contemplating other program enhancements that are anticipated to further improve program performance and the customer experience with the program:

- Developing new content specific to shoulder month email MyHERs;
- The full HOMERS rollout;
- Revised service-level agreements (SLAs);
- Duke Energy app; and
- Self-comparisons of energy usage (as opposed to "neighborhood" comparisons).

#### **4.2.2 Customer Surveys - DEC**

The customer surveys included questions focused specifically on the experience of and satisfaction with the information provided in MyHERs and awareness of MyHER Interactive—these questions were asked only of households in the treatment group.

Both treatment and control households answered the remaining questions, which focused on assessing:

- Awareness of Duke Energy efficiency program offers;
- Satisfaction with the Duke Energy, and services Duke Energy provides to help households manage their energy use;
- Levels of awareness of and interest in household energy use; motivations and perceived importance;
- Reported behavioral or equipment-based upgrades; and

- Barriers that prevent customers from undertaking energy savings actions.

#### 4.2.2.1 Comparing Treatment and Control Responses - DEC

This section presents the results of survey questions asked of both treatment and control households in DEC and compares the response patterns. Statistically significant differences between treatment and control households are noted.

##### Duke Energy Customer Satisfaction

Both treatment and control groups' overall satisfaction with Duke Energy are high. Seventy-three percent of treatment customers and 78% of control customers are satisfied or very satisfied with Duke Energy as their electric supplier (rated 8 or higher on a 0-10 point scale); the difference is not statistically significant at the 90% level of confidence.

Control households rated Duke Energy higher on providing excellent customer service, respecting its customers, and providing service at a reasonable cost than treatment households. The differences between the control and treatment group are not statistically significant (Figure 4-4). MyHER does not result in a measurable change in stated customer satisfaction with Duke Energy in DEC.

**Figure 4-4: Satisfaction with Various Aspects of Customer Service - DEC**

Additionally, the differences between treatment and control customers with respect to satisfaction with the information available about Duke Energy's efficiency programs, the information Duke Energy provides to help customers save on energy bills, and Duke Energy's commitment to promoting energy efficiency and the wise use of electricity are not statistically significant (Figure 4-5), thus MyHER has not measurably changed customers' satisfaction with Duke Energy's promotion of energy efficiency at DEC.

**Figure 4-5: Satisfaction with Energy Efficiency Offerings and Information - DEC**

### Engagement with Duke Energy's Website

Both groups answered several questions about their use of the Duke Energy website, a proxy for overall engagement with information provided by the utility on energy efficiency and household energy use, and the results showed no significant differences. Table 4-5 shows that 36% of the treatment group and 37% of the control group reported they had never logged in to their Duke Energy accounts. Among those that had logged in, the most commonly reported purpose was to pay their bill.

**Table 4-7: Use of Duke Energy Online Account - DEC**

Online Account Activity	Treatment Group (n=180)	Control Group (n=204)
Never logged in	36%	37%
Pay my bill	36%	37%
Look for energy efficiency opportunities or ideas	16%	16%

As shown in Figure 4-6, control group households were more likely to report that they accessed the Duke Energy website to search for information about rebate programs, energy efficient products, or ways to make their home more energy efficient, but the difference is not statistically significant. Relatively small percentages of both groups report regular usage of the website for purposes other than bill payment.

**Figure 4-6: Frequency Accessing the Duke Energy Website to Search for Other Information - DEC**

Thirty-six percent of control group and treatment group customers, respectively, reported they would be likely to check the Duke Energy website for information before purchasing major household equipment. The portion of respondents rating their likelihood a “7” or higher on an 11-point scale of likelihood is plotted in Figure 4-7. Overall, MyHER has not produced a measurable change in customer engagement with Duke Energy’s standard online offerings (distinct from the online MyHER Interactive offering).

While we observe no effect on customer engagement with Duke Energy online resources attributable to MyHER, the survey responses across both treatment and control customers should be placed into context with their demographics. All survey respondents reside in single-family homes, since the MyHER program is only available to customers in single-family homes, so we should expect that the respondents of this survey should skew towards respondents who have attained a greater age than that might be expected of the general Duke Energy customer base. As we indeed show later in this section, the average age of respondents of this survey is older than what would be expected relative to U.S. Census estimates of the age distribution of the population in North and South Carolinas. About 43% of DEC treatment respondents are 65 years of age or older. About 47% of DEC control customers are included in that age bracket as well. This is in comparison to U.S. Census estimates that 16% of the population of the Carolinas falls into the same age bracket. Therefore, Duke Energy should interpret the responses of this survey as representing an older group of customers than their customer base overall. Residents of multi-family homes would be expected to be younger, on average, and would be hypothesized to report higher rates of engagement with Duke Energy’s online content.

**Figure 4-7: Portion Likely to Check Duke Energy Website prior to Purchasing Major Home Equipment - DEC**

### Reported Energy Saving Behaviors

Treatment customers were much more likely than control customers to report having undertaken behaviors to reduce household energy use or having made energy efficiency improvements to their home (73% to 63%;  $p = .013$ ). Treatment and control customers track information (bills and usage) related to their household's energy usage in the following ways (Figure 4-8):

- Fifty-seven percent of the treatment customers and 69% of the control customers reported tracking the total amount of the bill. The difference is statistically significant at the 90% level of confidence.
- About two-thirds of respondents compared usage to previous months. The difference between the treatment and control groups is not statistically significant.
- More than half of respondents compare usage to the same month from last year, but the difference in responses here between treatment and control groups is not statistically significant at the 90% level of confidence.

**Figure 4-8: “Which of the Following Do you Do with Regard to Your Household’s Energy Use?” - DEC**

Treatment group respondents were significantly more likely to turn off lights in unused or outdoor areas, adjust heating or cooling setting to save energy, maintain heating or cooling equipment for more efficient operation, fully load clothes washer, fully load dishwasher, wash clothes in cold water, and reduce water heater temperature to save energy than the control group, as shown in Figure 4-9. These differences are statistically significant at the 90% level of confidence.

**Figure 4-9: Reported Energy Saving Behaviors - DEC**

Ninety-six respondents (treatment and control customers in total) reported other energy savings actions. Nexant categorized these actions and the results are shown in Figure 4-10. The most commonly reported action, mentioned by 29 respondents, pertains to lighting, such as switching to LED bulbs, etc.

**Figure 4-10: Distribution of Other Energy Savings Behaviors - DEC**

#### Reported Energy Efficiency Improvements Made

Respondents were provided with a list of energy efficiency improvements and asked if they had done each in the past year. The treatment group had a significantly higher percentage of customers reported having installed lighting with more energy efficient types than the control customers did (Table 4-8). None of the other differences were statistically significant at the 90% level of confidence.

**Table 4-8: Portion Indicating They Had Made Each Energy Efficiency Upgrade - DEC**

Upgrade	Control	Treatment
Install energy-efficient lighting (Control n=198, Treatment n=311)*	52%	60%
Purchase ENERGY STAR certified home electronic equipment (a television, for example) (Control n=187, Treatment n=298)	39%	43%
Install energy-efficient kitchen or laundry appliances (Control n=196, Treatment n=306)	34%	39%
Install energy-efficient heating/cooling equipment (Control n=196, Treatment n=302)	33%	34%
Install programmable thermostat or "smart" thermostat (Control n=197, Treatment n=307)	32%	34%
Caulk or weatherstrip (windows or doors) (Control n=194, Treatment n=307)	29%	36%
Install energy-efficient water heater (Control n=195, Treatment n=301)	26%	29%
Add insulation to attic, walls, or floors (Control n=197, Treatment n=301)	23%	23%
Replace windows or doors with more energy-efficient types (Control n=199, Treatment n=308)	20%	26%

\*statistically significant, p=0.084

**Behavior and Upgrade Category Variables**

To examine broader patterns within the survey responses that cover many specific cases of energy saving behavior and upgrades, participant responses to the behavior and upgrade questions were combined into behavior vs. upgrade categories and were also combined into end-use categories. As shown in (Table 4-9), treatment group respondents were significantly more likely to engage in energy efficiency behaviors and improvements generally, and also undertook significantly more energy efficiency behaviors.

**Table 4-9: Percent of Households That Have Undertaken Energy Efficiency Actions - DEC**

Behaviors/Improvements	Treatment Group	Control Group
Any Energy Efficiency Behavior (Treatment n=314, Control n=206)*	73%	62%
Average Number of Behaviors**	5.13	4.24
Any Energy Efficiency Improvements (Treatment n=314, Control n=203)***	69%	61%
Average Number of Improvements	3.15	2.77

\*statistically significant, p=0.009

\*\*statistically significant, p=0.004

\*\*\*statistically significant, p=0.046

Additionally, Table 4-10 shows the proportion of respondents that had undertaken at least one behavior or upgrade in each end use category. In six of the nine categories, treatment group members were significantly more likely to have undertaken at least one of these activities.

These results demonstrate that MyHERs have increased energy efficiency behaviors in treatment customers.

**Table 4-10: Percent of Households That Had Undertaken Energy Efficiency Actions, by End Use Category - DEC**

Behaviors/Improvements	Treatment Group	Control Group
Water Heating Behaviors and Upgrades (Treatment n=314, Control n=206)*	71%	61%

\*\*\*\*\*statistically significant, p=0.005

\*\*\*\*\*statistically significant, p=0.025

### Customer Motivation and Awareness

The control group and treatment groups report similar levels of motivation for saving energy. Eighty-one percent of control customers indicated that knowing they are using energy wisely is “important” or “extremely important”, compared to 78% of treatment customers. This difference is not statistically significant (Figure 4-11).

**Figure 4-11: “How Important Is It for You to Know if Your Household is Using Energy Wisely?” - DEC**

Customers were asked to rate, on a scale of 0 to 10, the importance of various reasons why they might try to reduce their home’s energy use. The strongest motivation for both groups is saving money on their energy bills, where 89% of treatment respondents and 89% of control respondents reported that saving money on their energy bills was “important” or “extremely important”. Eighty-seven percent of control respondents and treatment respondents respectively indicated that “avoiding waste” was “important” or “extremely important” to them. Eighty-six percent of treatment customers and 83% of control customers reported that “conserving energy resources” was “important” or “extremely important”. Eighty percent of treatment customers and control customers respectively reported that “helping the environment” was “important” or “extremely important”. None of the differences between treatment and control groups are statistically significant. Figure 4-12 contains the frequency of responses to this question, shown as a percentage for both treatment and control groups.

**Figure 4-12: “Please Indicate How Important Each Statement Is to You” - DEC**

As indicated by Figure 4-13, among treatment customers, 67% rated themselves above a seven on a 0-10 point scale of knowledgeability of ways to save energy, while 65% of control group customers rated themselves this way. The difference is not statistically significant at the 90% level of confidence.

**Figure 4-13: “How Would You Rate Your Knowledge of the Different Ways You Can Save Energy in Your Home?” - DEC**

Treatment respondents that took the treatment-only survey were asked how useful each MyHER feature was to their homes. A similar question was asked of both control group and treatment group respondents who took the primary survey rephrased to ask them how useful they *might expect* that information to be. Table 4-11 presents results of the portion rating each item a “7” or higher on an 11-point scale of the hypothetical usefulness from the control and treatment customers who took the primary survey, and Table 4-12 presents the comparison results between the actual usefulness of each item rated by treatment customers (treatment-only survey) and the hypothetical usefulness rated by control customers in the primary survey).<sup>12</sup>

The results from the hypothetical usefulness rating (Table 4-11) did not find statistically significant differences in expected usefulness of information that is found on MyHER reports. Comparisons between the responses of customers in the treatment-only survey and control customers in the primary survey show that treatment customers respond differently to questions about information presented in MyHERs if the questions are asked in the context of the actual MyHER reports, however the response patterns overall are similar – not much is seen by way of a significant separation between treatment and control customers in terms of usefulness of report content. However, there is one exception: Table 4-12 shows that control customers were significantly more likely to think that “Information about services and offers from Duke Energy” might be useful than treatment customers actually thought they were. This finding suggests that there may be an opportunity to improve the presentment of information in MyHERs about Duke Energy’s services and offerings.

**Table 4-11: Hypothetical Usefulness of HER Features Treatment and Control - DEC**

HER Feature	Control Group_Primary Survey	Treatment Group_Primary Survey
Graphs that display your home's energy use over time	71% (n=204)	66% (n=181)
Information about services and offers from Duke Energy	67% (n=205)	65% (n=181)
Tips to help you save money and energy	67% (n=205)	72% (n=183)
Examples of the energy use associated with common household items	67% (n=203)	66% (n=182)
Your home's energy use compared to that of similar homes	57% (n=202)	60% (n=181)
Customized suggestions for your home	56% (n=200)	63% (n=180)

<sup>12</sup> The implementation of a treatment-only survey, in addition to a primary survey provided to both treatment and control customers, afforded an opportunity to test the responses of treatment customers to a question asking about a MyHER feature they have actually seen vs. asking generally about how useful the information is (outside of the context of MyHER). This test leads us to the conclusion that the way customers are asked about this question matters and we recommend that in future surveys, MyHER treatment customers see questions about report content placed specifically in the context of them having seen the content in their reports, as opposed to in the hypothetical.

**Table 4-12: Actual Usefulness versus Hypothetical Usefulness of HER Features  
Treatment and Control - DEC**

HER Feature	Control Group_Primary Survey	Treatment Group_Treatment Only Survey
Graphs that display your home's energy use over time	71% (n=204)	76% (n=135)
Information about services and offers from Duke Energy*	67% (n=205)	58% (n=134)
Tips to help you save money and energy	67% (n=205)	66% (n=135)
Examples of the energy use associated with common household items	67% (n=203)	64% (n=135)
Comparison to similar homes	57% (n=202)	53% (n=135)
Customized suggestions for your home	56% (n=200)	59% (n=134)

\*statistically significant, p=0.089

**Barriers to Customers Undertaking Energy Savings Actions**

When asked the reasons why customers might not be able to save as much as energy as they would like, there were no statistically different response patterns between treatment and control customers, which indicates that MyHER is not making a measurable change in the potential barriers mentioned in this survey. The most commonly reported barrier is “the initial cost of energy efficient equipment is too high” (Figure 4-14): 59% of treatment respondents reported this as a barrier and 58% of control respondents did so as well. The least-commonly cited barrier was lack of expertise: 33% of treatment customers cited lack of expertise as a barrier as did 36% of control customers.

**Figure 4-14: Barriers to Customers Undertaking Energy Savings Actions - DEC**

### Suggestions about Duke Energy Improving Service Offerings

The survey provided an open-ended question to elicit suggestions about Duke Energy improving its service offerings to help customers reduce energy use. Only 22% (119 of 548, treatment and control customers in total) offered suggestions, including sixteen who offered only appreciative comments. Among those offering suggestions for improvement, the most common request, mentioned by 42 of the 119 with suggestions, reflected a desire for more energy savings information, programs, free light bulbs, and more incentives:

- *“I would love to have a visit/walk through with someone who could look at our home and make suggestions”*
- *“Send free light bulbs”*
- *“Give rebates on appliances”*
- *“Continue to supply usage statistics”*
- *“Provide a smart device at the breaker box that would connect to your smartphone to tell you your energy consumption. Something real-time would be helpful. Then you would / could modify your daily activities real-time based on what you are seeing”*

Other comments centered on other suggestions, such as better communication and reducing price/providing senior and disability discounts. Nexant categorized these suggestions on the general basis of their content; the results are presented in Table 4-13.

**Table 4-13: Suggestions about Duke Energy Improving Service Offerings - DEC**

Suggestion	Count	Percent of Respondents Mentioning (n=119)	Percent of Total Mentions (n=130)
Provide more energy savings information, programs, free light bulbs and more incentives	42	35%	32%
Better communication	23	19%	18%
Reduce price/provide senior and disability discounts	22	18%	17%
Appreciation	16	13%	12%
Miscellaneous	7	6%	5%
Reduce power outages	6	5%	5%
Improve website	4	3%	3%
Provide more detailed info in MyHER/offer MyHER to Townhomes/do more survey	5	4%	4%
Expressed Frustration	5	4%	4%

### Evidence of MyHER Effects

As noted above, while formal statistical testing found a number of differences among treatment and control group households for individual questions, the Nexant team sought to understand if

the overall pattern of survey responses differed among treatment and control households. To do this, we categorized each survey question by topic area and then counted any survey item in which the treatment households provided a more positive response than the control households. Table 4-14 presents the categories, the count of questions in each category for which the treatment group provided a more favorable response than the control group, and the number of questions in each category. A response is considered “favorable” if the treatment group gave a response that is consistent with the program objectives of MyHER.

**Table 4-14: Survey Response Pattern Index - DEC**

Question Category	Count of Questions where T>C	Number of Questions in Topic Area	Portion of Questions where T>C
Duke Energy's Public Stance on Energy Efficiency	3	3	100%
Customer Engagement with Duke Energy Website	2	5	40%
Customers' Reported Energy-saving Behaviors	10	11	91%
Customer's Reported Energy Efficiency Improvements Made	9	9	100%
Customer Motivation, Engagement & Awareness of Energy Efficiency	4	11	36%
Barriers to Customer Undertaking Energy Savings Actions	3	6	50%
Customer Satisfaction with Duke Energy	0	4	0%
<b>Total</b>	<b>31</b>	<b>49</b>	<b>63%</b>

Nexant's approach consists of the following logical elements:

- Assume the number of positive responses between treatment and control customers will be equal if MyHER lacks influence;
- Count the total number of topics and questions asked of both groups – there are seven topic areas and 49 questions;
- Note any item for which the treatment group outperformed the control group – the treatment group outperformed the control group in 31 questions, or 63% of the total questions;
- Since this value is more than 50% we can conclude that MyHER had wide-ranging enhancing effects across all the various engagement and attitudinal areas probed by the survey.
- Calculate the probability that the difference in response patterns is due to chance, rather than an underlying difference in populations – 2% (p-value = 0.021). Since this probability is less than 10%, we reject the null hypothesis (that the number of positive responses for treatment and control customers are equal) at the 90% level of confidence.

Because this analysis compares the response patterns between the treatment and control group, if the MyHER program did not influence customers, one would expect the treatment group to “score higher” on roughly half of the questions. In other words, if the MyHER is not influencing treatment group customers, there is a 50/50 chance that they will “outperform” the control group as many times as not. For a more detailed description of the index framework, see [Appendix G](#).

We call out the survey area covering general customer satisfaction with Duke Energy as an area of particular note: treatment customers reported lower satisfaction scores than control customers for all four general satisfaction questions. Nexant recommends that the MyHER program staff coordinate with any internal customer satisfaction data collection efforts to cross-reference these findings with any learnings on DEC customer satisfaction. The lower satisfaction scores for DEC treatment customers may indicate an opportunity for new MyHER messaging or content in DEC.

### Respondent Demographics

Nearly all respondents—93% of treatment group customers and 94% of control group customers—own their residence. More than half of households surveyed have two or fewer residents, but about 19% of treatment households and 20% of control households have four or more residents. There are no statistically significant differences in the distribution of ownership or age of homes assigned to the treatment and control groups ([Figure 4-15](#)) (chi-squared test).

**Figure 4-15: “In What Year Was Your Home Built?” - DEC**

[Figure 4-16](#) shows distribution of home square footage is similar between control and treatment households. The average square footage above ground is 2,031 for control households and 1,954 for treatment households, and the difference is not statistically significant.

**Figure 4-16: How many square feet is above ground living space? - DEC**

Respondent ages are relatively close to those reported by the U.S. Census American Community Survey (ACS) for Carolinas. The lowest age category (25-34) is often underrepresented when sampling based on residence in single family homes, given that many members of that population are in apartments, dormitories, or living with other family members. This common underrepresentation is true in this survey study, as well. Additionally, the average age is 62 for both control group respondents and treatment group respondents (see Table 4-15).

**Table 4-15: Respondent Age Relative to American Community Survey - DEC**

Age	Treatment Group (n=311)	Control Group (n=191)	2017 American Community Survey_Carolinas <sup>13</sup>
25-34	3%	3%	13%
35-44	8%	9%	13%
45-54	21%	19%	13%
55-64	25%	21%	13%
65 and over	43%	47%	16%

Figure 4-17 shows the primary heating fuel type used in control and treatment customers' households. Nearly half of treatment (48%) and control (46%) customers use electricity in their

<sup>13</sup> American Community Survey (ACS) is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.  
[https://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=ACS\\_16\\_SPL\\_K200104&prodType=table](https://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=ACS_16_SPL_K200104&prodType=table)

households for heating. Forty-five percent of treatment customers and 43% of control customers use natural gas for heating. These differences are not statistically significant.

**Figure 4-17: Primary Heating Fuel in Households - DEC**

#### 4.2.2.2 Treatment Households: Experience and Satisfaction with MyHER - DEC

A large majority of Treatment Only household respondents, 93%, (142 of 152) recalled receiving at least one of the MyHER reports.

The survey asked those that could recall receiving at least one MyHER report if they could recall how many individual reports they had received “in the past 12 months” (Figure 4-18). The survey launched in January 2019, which means that most recipients would have received 8 MyHERs in the year since February 2018. Thirty-two percent (44 of 136) responded that they received 11 to 12 home energy reports in the past 12 months. The scattered distribution of responses related to recall is consistent with the difficulty of recalling an exact number of reports, however the question is valuable for grounding respondents in the experience of receiving a MyHER before asking them more specific questions about the document.

**Figure 4-18: Reported Number of MyHERs Received “In the past 12 months” (n=136) - DEC**

Survey respondents indicated high interest in the MyHER reports. As shown in Figure 4-19, when asked how often they read the reports, 99% of respondents indicated they “always” or “sometimes” read the reports. Two respondents (1%) indicated they do not read the reports.

**Figure 4-19: How Often Customers Report Reading the MyHER (n=138) - DEC**

Eighty-seven percent (104 of the 120 respondents that provided a rating) reported being “somewhat” or “very” satisfied with the information contained in the reports (Figure 4-20). The survey asked a further question to the respondents of why they said so: sixty-one of the satisfied respondents provided reasons. Among customers who gave the highest satisfaction ratings, the most common comments on the MyHERs described the reports’ ability to engage the customer and provide greater awareness. The customers who reported being somewhat satisfied most often simply described the reports as “helpful.”

**Figure 4-20: Satisfaction with the Information in MyHER Reports (n=120) - DEC**

When asked to rate their agreement with a series of statements about MyHERs on a scale of 0 to 10, recipients largely agreed that the reports helped them understand their home’s energy use, with 71% of respondents rating their agreement a seven or higher on a 0-10 point scale, and that they use the report to gauge how successful they are at saving energy (65% rating a seven or higher). More than half (59%) agreed that the reports provided the details they needed to understand their home’s energy usage. Respondents provided weaker agreement to statements about the pertinence of the tips provided to their homes and whether they have taken actions to use less energy than they would not have since reading MyHERs. A relatively small percentage (11%) agreed with the statement that the information provided is confusing (Figure 4-21).

**Figure 4-21: Level of Agreement with Statements about MyHER (0-10 Scale) - DEC**

The survey provided an open-ended question to elicit suggestions about potential improvements to MyHER among those that had reported reading at least one report. Only 27% (37 of 136) offered suggestions, including seven who offered only appreciative comments. Among those offering suggestions for improvement, the most common request, mentioned by 16 of the 37 with suggestions, questioned accuracy of the comparison in the report. Fifteen of the 37 with suggestions reflected a desire for more specific information or details about their home and specific actions they should take. Some of these requests reflected interest in understanding at a more granular level how their home uses energy and energy consumption information related to appliances:

- *"By explaining what factors influence our rating"*
- *"I know it's probably not possible but it would be nice to see the actual percentage of what in the household is using what energy..."*
- *"Be more specific as to which appliances, etc. are using how much energy compared to a standard or an efficient use"*
- *"Narrow the comparison to homes closer in size and age along with the number of household members to each consumer"*
- *"Pinpoint possible problems that could be causing energy waste"*

Other comments centered on other suggestions (such as providing free energy assessment, etc.), and a few respondents that simply did not see value in the reports. Responses coded as recommending production changes focus on changing the delivery method of MyHER reports as follows:

- *" Send via email..."*

- “Send them via email instead of wasting paper and stamps”

Nexant categorized these suggestions on the general basis of their content; the results are presented in Table 4-16.

**Table 4-16: Distribution Suggestions for Improvement (Multiple Responses Allowed) - DEC**

Suggestion	Count	Percent of Respondents Mentioning (n=37)	Percent of Total Mentions (n=47)
Don't believe comparison/accuracy	16	43%	34%
Provide more specific information or details	15	41%	32%
Appreciate the Home Energy Report	7	19%	15%
Change production (mail, paper, format)	4	11%	9%
Expressed frustration	2	5%	4%
Other suggestions (such as providing home inspection, etc.)	2	5%	4%
Don't see value/dislike	1	3%	2%

Treatment households were also asked questions that focused on the awareness and use of MyHER Interactive, revealing low awareness of the online Interactive platform:

- Only 28% of treatment customers are aware of MyHER Interactive;
- Among aware customers, 92% reported that they had not signed up to use MyHER Interactive; and
- When asked why they haven't signed up to use MyHER Interactive, 30% of respondents reported that they were very busy, 22% reported that they were not interested in it, and 9% further reported that they did not know about it.

#### 4.2.3 Customer Surveys - DEP

As was the case for DEC, the DEP customer surveys included a section of questions focused specifically on the experience of and satisfaction with the information provided in MyHERs, and the awareness of MyHER Interactive—these questions were asked only of households in the treatment group. Both treatment and control households answered the remaining questions, which focused on assessing:

- Awareness of Duke Energy efficiency program offers;
- Satisfaction with the Duke Energy, and services Duke Energy provides to help households manage their energy use;
- Levels of awareness of and interest in household energy use; motivations and perceived importance;
- Reported behavioral or equipment-based upgrades; and

- Barriers that prevent customers from undertaking energy savings actions.

#### 4.2.3.1 Comparing Treatment and Control Responses

This section presents the results of survey questions asked of both treatment and control households in DEP and compares the response patterns between the two groups. Statistically significant differences between treatment and control households are noted.

##### Duke Energy Customer Satisfaction

Both treatment and control groups' overall satisfaction with Duke Energy are high. Seventy-six percent of treatment customers and 74% of control customers are satisfied or very satisfied with Duke Energy as their electric supplier (rated eight or higher on a 0-10 point scale); the difference is not statistically significant at the 90% level of confidence.

Treatment households rated Duke Energy higher on providing service at a reasonable cost, while control households rated Duke Energy higher on respecting its customers. These differences between treatment and control groups are also not statistically significant (Figure 4-22). Treatment and control households rated Duke Energy the same on providing excellent customer service. MyHER does not result in a measurable change in stated customer satisfaction with Duke Energy in DEP.

**Figure 4-22: Satisfaction with Various Aspects of Customer Service - DEP**

On the other hand, treatment group responses indicate that MyHER reports had a significant positive effect on customer satisfaction with certain aspects of Duke Energy's energy efficiency efforts (Figure 4-23). The differences between treatment and control customers with respect to satisfaction with the information available about Duke Energy's efficiency programs, the information Duke Energy provides to help customers save on energy bills, and Duke Energy's

commitment to promoting energy efficiency and the wise use of electricity are statistically significant at the 90% level of confidence.

**Figure 4-23: Portion Satisfied with Energy Efficiency Offerings and Information - DEP**

### Engagement with Duke Energy's Website

Both groups answered several questions about their use of the Duke Energy website, a proxy for overall engagement with information provided by the utility on energy efficiency and household energy use. Table 4-17 shows that 42% of the treatment group and 38% of the control group reported they had never logged in to their Duke Energy accounts. Among those that had logged in, the most commonly reported purpose was to pay their bill.

**Table 4-17: Use of Duke Energy Online Account - DEP**

Online Account Activity	Treatment Group (n=174)	Control Group (n=185)
Never logged in	42%	38%
Pay my bill	36%	38%
Look for energy efficiency opportunities or ideas	10%	8%

Treatment group households were more likely to report that they accessed the Duke Energy website to search for information about rebate programs, energy efficient products, or ways to make their home more energy efficient, but the difference is not statistically significant. Relatively small percentages of both groups report regular usage of the website for purposes other than bill payment, as shown in Figure 4-24.

**Figure 4-24: Frequency Accessing the Duke Energy Website to Search for Other Information - DEP**

Thirty-nine percent of control group and 41% of treatment group customers reported they would be likely to check the Duke Energy website for information before purchasing major household equipment. The difference between the control and treatment group is not statistically significant at the 90% level of confidence. The portion of respondents rating their likelihood a “7” or higher on an 11-point scale of likelihood is plotted in Figure 4-25.

Overall, MyHER has not produced a measurable change in customer engagement with Duke Energy’s standard online offerings (distinct from the online MyHER Interactive offering) at DEP. As stated earlier in the presentation of DEC survey findings, these survey responses relating to engagement with Duke Energy’s online resources should be placed into context with the DEP respondents’ demographics. All DEP survey respondents reside in single-family homes, since the MyHER program is only available to customers in single-family homes. We therefore expect that the DEP respondents of this survey should skew towards respondents who have attained a greater age than that might be expected of the general Duke Energy customer base. We indeed find, as we discuss at greater length later in this section, that the average age of respondents of this survey is older than what would be expected relative to U.S. Census estimates of the age distribution of the population in North and South Carolinas. About 45% of DEP treatment respondents are 65 years of age or older. About 44% of DEP control customers are included in that age bracket as well. This is in comparison to U.S. Census estimates that 16% of the population of the Carolinas falls into the same age bracket. Therefore, Duke Energy should interpret the responses of this survey as representing an older group of customers than their customer base overall. Residents of multi-family homes would be expected to be younger, on average, and would be hypothesized to report higher rates of engagement with Duke Energy’s online content.

**Figure 4-25: Portion Likely to Check Duke Energy Website prior to Purchasing Major Home Equipment - DEP**

### Reported Energy Saving Behaviors

Treatment and control customers track information (bills and usage) related to their household's energy usage in the following ways (Figure 4-26):

- Seventy-one percent of the treatment customers and 69% of the control customers reported tracking the total amount of the bill. The difference is not statistically significant at the 90% level of confidence.
- Sixty-nine percent of the treatment group and control group, respectively, compared usage to previous months. The difference is not statistically significant.
- Sixty-six percent of the treatment respondents and 56% of the control respondents compared usage to the same month from last year. The difference in responses here between treatment and control groups are statistically significant at the 90% level of confidence.

**Figure 4-26: “Which of the Following Do you Do with Regard to Your Household’s Energy Use?” - DEP**

In general, treatment customers were more likely than control customers to report having undertaken behaviors to reduce household energy use or having made energy efficiency improvements to their home (71% to 60%;  $p = 0.008$ ).

Specifically, the treatment group was more likely to turn off lights in unused or outdoor areas, adjust heating or cooling settings to save energy, fully load dishwasher, wash clothes in cold water and use a portable fan or ceiling fan for cooling than treatment group, as shown in Figure 4-27. These differences are statistically significant at the 90% level of confidence.

**Figure 4-27: Reported Energy Saving Behaviors - DEP**

Ninety-three respondents (treatment and control customers in total) reported other energy savings actions as free form text. Nexant categorized these actions and the results are shown in Figure 4-28. The most commonly reported action, mentioned by 30 respondents, pertains to HVAC/AC/Heating system, such as installing a new HVAC system.

**Figure 4-28: Distribution of Other Energy Savings Behaviors - DEP**

#### Reported Energy Efficiency Improvements Made

Respondents were provided with a list of energy efficiency improvements and asked if they had done each one in the past year. The treatment group had significantly higher percentages of customers who reported purchasing ENERGY STAR certified home electronic equipment, installing energy-efficient kitchen or laundry appliances, installing energy-efficient heating/cooling equipment, installing programmable thermostat or “smart” thermostat, and adding insulation to attic, walls, or floors than the control customers did (Table 4-18).

**Table 4-18: Portion Indicating They had Made Each Energy Efficiency Upgrade - DEP**

Upgrade	Control	Treatment
Install energy-efficient lighting (Control n=187, Treatment n=306)	50%	57%
Caulk or weatherstrip (windows or doors) (Control n=186, Treatment n=301)	35%	38%
Purchase ENERGY STAR certified home electronic equipment (a television, for example) (Control n=178, Treatment n=289)*	35%	45%
Install energy-efficient kitchen or laundry appliances (Control n=185, Treatment n=295)**	30%	45%
Install energy-efficient heating/cooling equipment (Control n=179, Treatment n=297)***	29%	38%
Install energy-efficient water heater (Control n=178, Treatment n=293)	28%	32%
Install programmable thermostat or "smart" thermostat (Control n=182, Treatment n=300)****	26%	36%
Replace windows or doors with more energy-efficient types (Control n=184, Treatment n=301)	22%	26%
Add insulation to attic, walls, or floors (Control n=180, Treatment n=299)*****	20%	28%

\*statistically significant, p=0.049

\*\*statistically significant, p=0.001

\*\*\*statistically significant, p=0.054

\*\*\*\*statistically significant, p=0.02

\*\*\*\*\*statistically significant, p=0.048

### Behavior and Upgrade Category Variables

To examine broader patterns within the survey responses that cover many specific cases of energy saving behavior and upgrades, participant responses to the behavior and upgrade responses were combined into their respective categories, and were also combined into end-use categories. As shown in Table 4-19, treatment group respondents were significantly more likely to engage in energy efficiency behaviors and improvements, and also undertook significantly more energy efficiency behaviors and upgrades. These results demonstrate that MyHERs have increased energy efficiency behaviors in treatment customers in DEP.

**Table 4-19: Percent of Households That Had Undertaken Energy Efficiency Actions - DEP**

Behaviors/Improvements	Treatment Group	Control Group
Any Energy Efficiency Behavior (Treatment n=31, Control n=190)*	71%	60%
Average Number of Behaviors**	5.03	4.28
Any Energy Efficiency Improvements (Treatment n=313, Control n=189)***	70%	57%
Average Number of Improvements****	3.28	2.67

\*statistically significant, p=0.008

\*\*statistically significant, p=0.022

\*\*\*statistically significant, p=0.003

\*\*\*\*statistically significant, p=0.018

Further, Table 4-20 shows the proportion of respondents that had undertaken at least one behavior or upgrade in each end use category. In all nine categories, treatment group members were significantly more likely to have undertaken at least one of these activities. These results further demonstrate that MyHERs have increased energy efficiency behaviors in treatment customers.

**Table 4-20: Percent of Households That Had Undertaken Energy Efficiency Actions, by End Use Category - DEP**

Behaviors/Improvements	Treatment Group	Control Group
Water Heating Behaviors/Upgrades (Treatment n=315, Control n=189)*	70%	59%
Water Heating Behaviors (Treatment n=315, Control n=187)**	70%	58%
Space Heating Behaviors/Upgrades (Treatment n=315, Control n=190)***	71%	60%
Space Heating Behaviors (Treatment n=315, Control n=190)****	71%	60%

### Customer Motivation and Awareness

The control group and treatment groups report similar levels of motivation to save energy. Eighty-two percent of control customers and treatment customers respectively, indicated that knowing they are using energy wisely is important or “important” or “extremely important”. (Figure 4-29). The reported percentage for the Treatment group differs from that in the figure due to rounding.

**Figure 4-29: “How Important Is It for You to Know if Your Household is Using Energy Wisely?” - DEP**

Customers were asked to rate, on a scale of 0 to 10, the importance of various reasons for why they might try to reduce their home’s energy use. The strongest motivation for both groups is saving money on their energy bills, where 91% of treatment respondents and 90% of control respondents reported that saving money on their energy bills was “important” or “extremely important”. Eighty-four percent of control respondents and 85% of treatment respondents, respectively, indicated that “avoiding waste” was important” or “extremely important” to them. Eighty-one percent of both treatment customers and control customers reported that “conserving energy resources” was important” or “extremely important”. Seventy-nine percent of treatment customers and 77% of control customers reported that “helping the environment” was “important” or “extremely important”. Those differences between the treatment and control group are not statistically significant. Figure 4-30 contains the frequency of responses to this question, shown as a percentage for both the treatment and control group.

**Figure 4-30: “Please Indicate How Important Each Statement Is to You” - DEP**

As indicated by Figure 4-31, 67% of treatment customers rated themselves above a seven on a 0-10 point scale of knowledgeability of ways to save energy, while 62% of control group customers rated themselves this way. The difference is not statistically significant at the 90% level of confidence.

**Figure 4-31: “How Would You Rate Your Knowledge of the Different Ways You Can Save Energy in Your Home?” - DEP**

Treatment respondents that took the treatment-only survey were asked how useful each MyHER feature was to their homes. A similar question was asked of both control group and treatment group respondents who took the primary survey rephrased to ask them how useful they *might expect* that information to be. Table 4-21 presents results of the portion, rating each item a “7” or higher on an 11-point scale of the hypothetical usefulness from the control and treatment customers who took the primary survey, and Table 4-22 presents the comparison results between the actual usefulness of each item rated by treatment customers (treatment-only survey) and the hypothetical usefulness rated by control customers in the primary survey).<sup>14</sup>

The results from the hypothetical usefulness rating (Table 4-21) did not find statistically significant differences in expected usefulness of information that is found on MyHER reports. Comparisons between the responses of customers in the treatment-only survey and control customers in the primary survey show that treatment customers respond differently to questions about information presented in MyHERs if the questions are asked in the context of the actual MyHER reports, however the response patterns show some limited significant separation between treatment and control customers in terms of usefulness of report content: Table 4-22 shows that control customers were significantly more likely to report that “Tips to help you save money and energy”, “Information about services and offers from Duke Energy”, and “Comparison to similar homes” would be useful than treatment customers reporting that they are actually useful. This finding suggests that there may be an opportunity to improve the presentment of this information in MyHERs.

**Table 4-21: Hypothetical Usefulness of HER Features Treatment and Control - DEP**

HER Feature	Control Group_Primary Survey	Treatment Group_Primary Survey
Tips to help you save money and energy	73% (n=188)	72% (n=173)
Graphs that display your home's energy use over time	72% (n=185)	73% (n=174)
Information about services and offers from Duke Energy	68% (n=186)	67% (n=172)
Examples of the energy use associated with common household items	67% (n=184)	67% (n=173)
Your home's energy use compared to that of similar homes	66% (n=183)	59% (n=173)
Customized suggestions for your home	60% (n=183)	66% (n=172)

<sup>14</sup> The implementation of a treatment-only survey, in addition to a primary survey provided to both treatment and control customers, afforded an opportunity to test the responses of treatment customers to a question asking about a MyHER feature they have actually seen vs. asking generally about how useful the information is (outside of the context of MyHER). This test leads us to the conclusion that the way customers are asked about this question matters and we recommend that in future surveys, MyHER treatment customers see questions about report content placed specifically in the context of them having seen the content in their reports, as opposed to in the hypothetical.

**Table 4-22: Usefulness or Hypothetical Usefulness of HER Features Treatment and Control - DEP**

HER Feature	Control Group_Primary Survey	Treatment Group_Treatment Only Survey
Tips to help you save money and energy*	73% (n=188)	64% (n=146)
Graphs that display your home's energy use over time	72% (n=185)	73% (n=147)
Information about services and offers from Duke Energy**	68% (n=186)	54% (n=145)
Examples of the energy use associated with common household items	67% (n=184)	60% (n=146)
Comparison to similar homes***	66% (n=183)	46% (n=146)
Customized suggestions for your home	60% (n=183)	54% (n=147)

\*\*statistically significant, p=0.014

\*\*\*statistically significant, p=0.000

### Barriers to Customers Undertaking Energy Savings Actions

When asked the reasons why customers might not be able to save as much as energy as they would like, there were no statistically different response patterns between treatment and control customers, which indicates that MyHER is not making a measurable change in the potential barriers mentioned in this survey. The most commonly reported barrier is “the initial cost of energy efficient equipment is too high” (Figure 4-32): 54% of treatment respondents reported this as a barrier and 50% of control respondents did so as well. The least-commonly cited barrier was lack of expertise: 34% of treatment customers cited lack of expertise as a barrier as did 37% of control customers. The differences are not statistically significant.

**Figure 4-32: Barriers to Customers Undertaking Energy Savings Actions - DEP**

### Suggestions about Duke Energy Improving Service Offerings

The survey provided an open-ended question to elicit suggestions about Duke Energy improving its service offerings to help customers reduce energy use. Only 22% (116 of 539, treatment and control customers in total) offered suggestions, including fourteen who offered only appreciative comments. Among those offering suggestions for improvement, the most common request, mentioned by 44 of the 116 with suggestions, reflected a desire for more energy savings information, programs, free light bulbs, and more incentives:

- *“They can make available those light bulbs, to us senior citizens that don't use computers. So we can order them”*
- *“Suggestions how to improve energy and reduce bill”*
- *“home energy inspections and a list of energy saving products that can be used to lower monthly costs”*
- *“Provide information regarding the amount of energy it takes to run dishwashers, lamps, televisions...”*
- *“Provide more rebates for large ticket items”*

Other comments centered on other suggestions, such as better communication, reducing price/providing senior and disability discounts, etc. Nexant categorized these suggestions on the general basis of their content; the results are presented in Table 4-23.

**Table 4-23: Suggestions about Duke Energy Improving Service Offerings - DEP**

Suggestion	Count	Percent of Respondents Mentioning (n=116)	Percent of Total Mentions (n=137)
Provide more energy savings information, programs, free light bulbs and more incentives	44	38%	32%
Better communication	26	22%	19%
Reduce price/provide senior and disability discounts	21	18%	15%
Miscellaneous	16	14%	12%
Appreciation	14	12%	10%
Express Frustration	10	9%	7%
Reduce power outages	4	3%	3%
Provide more detailed info in MyHER / offer MyHER to Townhomes / do more surveys	1	1%	1%
Improve website	1	1%	1%

### Evidence of MyHER Effects

As noted above, while formal statistical testing found a number of differences among treatment and control group households for individual questions, the Nexant team sought to understand if the overall pattern of survey responses differed among treatment and control households. To do this, we categorized each survey question by topic area and then counted any survey item in which the treatment households provided a more positive response than the control households. Table 4-24 presents the categories, the count of questions in each category for which the treatment group provided a more favorable response than the control group, and the number of questions in each category. A response is considered “favorable” if the treatment group gave a response that is consistent with the program objectives of MyHER.

**Table 4-24: Survey Response Pattern Index - DEP**

Question Category	Count of Questions where T>C	Number of Questions in Topic Area	Portion of Questions where T>C
Duke Energy's Public Stance on Energy Efficiency	3	3	100%
Customer Engagement with Duke Energy Website	2	5	40%
Customers' Reported Energy-saving Behaviors	10	11	91%
Customer's Reported Energy Efficiency Improvements Made	9	9	100%
Customer Motivation, Engagement & Awareness of Energy Efficiency	10	11	91%
Barriers of Customer Not Undertaking Energy Savings Actions	4	6	67%
Customer Satisfaction with Duke Energy	2	4	50%
<b>Total</b>	<b>40</b>	<b>49</b>	<b>82%</b>

Nexant's approach consists of the following logical elements:

- Assume the number of positive responses between treatment and control customers will be equal if MyHER lacks influence;
- Count the total number of topics and questions asked of both groups – there are seven topic areas and 49 questions;
- Note any item for which the treatment group outperformed the control group – the treatment group outperformed the control group in 40 questions, or 82% of the total questions;
- Since this value is more than 50% we can conclude that MyHER had wide-ranging enhancing effects across all the various engagement and attitudinal areas probed by the survey.
- Considering these five areas, calculate the probability that the difference in response patterns is due to chance, rather than an underlying difference in populations – 0% (p-

value = 0.000). Since this probability is less than 10%, we reject the null hypothesis (that the number of positive responses for treatment and control customers is equal) at the 90% level of confidence.

Because this analysis compares the response patterns between the treatment and control group, if the MyHER program did not influence customers, one would expect the treatment group to “score higher” on roughly half of the questions. In other words, if the MyHER is not influencing treatment group customers, there is a 50/50 chance that they will “outperform” the control group as many times as not. For a more detailed description of the index framework, see [Appendix G](#).

### Respondent Demographics

Majority of all respondents—93% of treatment group customers and 88% of control group customers—own their residence. This difference is statistically significant. More than half of households surveyed have two or fewer residents, but about 22% of treatment households and control households respectively, have four or more residents. There are no statistically significant differences in the distribution of age of homes assigned to the treatment and control groups (Figure 4-33) (chi-squared test).

**Figure 4-33: “In What Year Was Your Home Built?” - DEP**

Figure 4-34 shows distribution of home square footage is similar between control and treatment households. The average square footage above ground is 2,022 for control households and 2,110 for treatment households.

**Figure 4-34: How many square feet is above ground living space? - DEP**

Respondent ages are relatively close to those reported by the U.S. Census American Community Survey (ACS) for Carolinas. The lowest age category (25-34) is often underrepresented when sampling based on residence in single family homes, given that many members of that population are in apartments, dormitories, or living with other family members. This common underrepresentation is true in this survey study, as well. The average age is 61 for control group respondents and 62 for treatment group respondents (see Table 4-25).

**Table 4-25: Respondent Age Relative to American Community Survey - DEP**

Age	Treatment Group (n=320)	Control Group (n=176)	2017 American Community Survey Carolinas <sup>15</sup>
25-34	3%	3%	13%
35-44	14%	9%	13%
45-54	19%	18%	13%
55-64	19%	26%	13%
65 and over	45%	44%	16%

Figure 4-35 shows the primary heating fuel type used in control and treatment customers' households. More than half of treatment (58%) and control (59%) customers use electricity in

<sup>15</sup> American Community Survey (ACS) is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.  
[https://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=ACS\\_16\\_SPL\\_K200104&prodType=table](https://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=ACS_16_SPL_K200104&prodType=table)

their households for heating. Thirty-two percent of treatment customers and 35% of control customers use natural gas for heating.

**Figure 4-35: Primary Heating Fuel in Households - DEP**

#### **4.2.3.2 Treatment Households: Experience and Satisfaction with MyHER - DEP**

A large majority of treatment household respondents, 94%, (160 of 170) recalled receiving at least one of the MyHER reports.

The survey asked those that could recall receiving at least one MyHER report if they could recall how many individual reports they had received “in the past 12 months” (Figure 4-36). The survey launched in January 2019, which means that most recipients would have received 8 MyHERs in the year since February 2018. Twenty-six percent (38 of 147) responded that they received 11 to 12 home energy reports in the past 12 months. The scattered distribution of responses related to recall is consistent with the difficulty of recalling an exact number of reports, however the question is valuable for grounding respondents in the experience of receiving a MyHER before asking them more specific questions about the document.

**Figure 4-36: Reported Number of MyHERs Received “In the past 12 months” (n=147) - DEP**

Survey respondents indicated high interest in the MyHER reports. As shown in Figure 4-37, when asked how often they read the reports, 94% of respondents indicated they “always” or “sometimes” read the reports. Ten respondents (6%) indicated they do not read the reports.

**Figure 4-37: How Often Customers Report Reading the MyHER (n=159) - DEP**

Eighty percent (105 of the 132 respondents that provided a rating) reported being “somewhat” or “very” satisfied with the information contained in the reports (Figure 4-38). The survey asked a further question to the respondents of why they said so: sixty-two of the satisfied respondents provided reasons. Among customers who gave the highest satisfaction ratings, the most common comments on the MyHERs described the reports’ ability to engage the customer and provide greater awareness. The customers who reported being somewhat satisfied most often simply described the reports as “useful.”

**Figure 4-38: Satisfaction with the Information in MyHER Reports (n=132) - DEP**

When asked to rate their agreement with a series of statements about MyHERs on a scale of 0 to 10, recipients largely agreed that the reports helped them understand their home’s energy use, with 72% of respondents rating their agreement a seven or higher on a 0-10 point scale, and that they use the report to gauge how successful they are at saving energy (65% rating a seven or higher). Sixty percent of respondents agreed that the reports provided the details they needed to understand their home’s energy usage. Respondents provided weaker agreement to statements about the pertinence of the tips provided to their homes and whether they have taken actions to use less energy than they would not have since reading MyHERs. A relatively small percentage (16%) agreed with the statement that the information provided is confusing. (Figure 4-39).

**Figure 4-39: Level of Agreement with Statements about MyHER (0-10 Scale) - DEP**

The survey provided an open-ended question to elicit suggestions about potential improvements to MyHER among those that had reported reading at least one report. Only 43% (64 of 149) offered suggestions, including six who offered only appreciative comments. Among those offering suggestions for improvement, the most common request, mentioned by 23 of the 64 with suggestions, reflected a desire for more specific information or details about their home and specific actions they should take. Some of these requests reflected interest in understanding at a more granular level how their home uses energy and energy consumption information related to appliances:

- *"How is energy distributed amongst outlets, appliances, etc."*
- *"More specific about what electronics use the most energy so I can lower the usage"*
- *"Hours of use, including hours of the day, compare to previous months and or years"*
- *"Maybe by specifying where exactly do we need to focus in order to bring the bill payment down"*
- *"Provide size and age of houses compared to"*

Other comments centered on other suggestions (such as providing free energy assessment, etc.), disbelief in the relevance of comparison homes, and a few respondents that simply did not see value in the reports. Responses coded as recommending production changes focus on changing the delivery method of MyHER reports as follows:

- *"Make all these energy reports available online, so that consumer can view it any time"*
- *"Make it available online..."*

Nexant categorized these suggestions on the general basis of their content; the results are presented in Table 4-26.

**Table 4-26: Distribution Suggestions for Improvement (Multiple Responses Allowed) - DEP**

Suggestion	Count	Percent of Respondents Mentioning (n=64)	Percent of Total Mentions (n=75)
Provide more specific information or details	23	36%	31%
Don't believe comparison/accuracy	16	25%	21%
Other suggestions (such as providing information on solar panels, etc.)	8	13%	11%
Appreciate the Home Energy Report	9	14%	12%
Address unique home/circumstances	5	8%	7%
Expressed frustration	5	8%	7%
Provide discounts/incentives/equipment upgrades	5	8%	7%
Change production (mail, paper, format)	3	5%	4%
Don't see value/dislike	1	2%	1%

Treatment households were also asked questions that focused on the awareness and use of MyHER Interactive, revealing low awareness of the online Interactive platform:

- Only 35% of treatment customers are aware of MyHER Interactive;
- Among aware customers, 86% reported that they had not signed up to use MyHER Interactive; and
- When asked why they haven't signed up to use MyHER Interactive, 23% of respondents reported that they were very busy, 23% reported that they were not interested in it, 18% reported that they did not have either a computer or internet access, and another 10% reported that they actually did not know about it.

### 4.3 Summary of Process Evaluation Findings

In-depth interviews with MyHER implementation staff reveal that the DEP and DEC MyHER program has benefited from a number of enhancements to the program and improvements in process and program management, and continues to operate effectively. Electronic MyHERs are now sent via email to all treatment customers that have provided Duke Energy with an email address. This enhancement means that report production is now a year-round process since the email reports are sent on a monthly basis for each month of the year. The MyHER report template was also refreshed to increase visual appeal and value to the customer. The new template includes the addition of a module that presents energy usage disaggregated by end-use category, on a looking-forward basis for the month ahead. Also, the template update

included the addition of images to the free form text (FFT) module of the reports. Lastly, the content and graphics of the email template was changed. There has also been increased enrollment for the MyHER Interactive online portal, which is emerging as a priority for Duke Energy and Tendril. The MyHER user experience is expected to be further enhanced in the future as the rollout of AMI meters and increased availability of AMI data continues.

From the backoffice perspective, Tendril, Duke Energy's MyHER program provider, implemented a number of process improvements. Tendril migrated their computational platform to Amazon Web Services (AWS), significantly reducing the time required to process data and generate batches of reports, and developed a pre-production platform to enable Duke Energy to review PDF drafts of MyHERs prior to promotion into production, which realized process efficiencies for Tendril. Additionally, Tendril has made progress on updating the "action tips" section of the report to "smart actions", by introducing the ability for these tips to be targeted to particular groups of MyHER recipients for which the tips are most appropriate. To date, roughly 20% of these tips are now "smart actions". Tendril also transitioned email MyHER production to Hypertext Markup Language (HTML) format to provide greater flexibility in Tendril's production processes.

Duke Energy and Tendril continue to collaborate for success through joint weekly status meetings, monthly operations meetings, and quarterly governance meetings. Working together, monthly key performance indicators (KPIs) such as in-home dates and percentage of treated customers treated are monitored. These meetings provide the venue for brainstorming and roadmapping activities as well as monitoring Duke Energy's MyHER product request list. This list is a priority for Duke Energy, and currently tracks about 25 items. Tendril has implemented an internal HER Improvement team to address the items on the list, and has made progress in this endeavor. Since the prior evaluation, Tendril has improved their performance in product quality, which is rigorously monitored by Duke Energy staff. These improvements have been attributed to a stable operations team at Tendril which has also expanded to include a quality control engineer. This engineer has designed and implemented automated QC checks, using AWS and other software, that have reduced errors in report production, increased the speed of the process, and reduced the staff necessary to manage it. This process will continue to change in 2019, as Tendril implements their HOMERS platform, allowing for increased efficiency in report production and quality control, as well as the implementation of the "self-serve" FFT tool that will eventually allow Duke Energy to produce and manage FFT content. This tool will eliminate the need for the highly resource-intensive collaboration procedure that has characterized FFT content production to this point.

Additionally, Tendril has also adopted a "Batch 0" strategy to implement significant changes to the MyHER reports on a test batch of data prior to producing a live batch to be mailed to customers. Batch 0 reports are tested for quality by both Tendril and Duke Energy and have allowed unexpected problems to be surfaced early and also to allow Duke Energy to fine tune the newly implemented changes. Improved product quality has resulted in fewer problems turning up in the quality control process.

In general, there was a strong emphasis on the development of procedures and strategies to prevent problems in the MyHER production process including a redesigned QC process, progress on the product request list, the management of messaging calendars, and the preparation for the rollout of HOMERS.

Though there has been continued success in communications and data transfers, there were some problems emerging from the process of reconciling customer email lists that resulted in the loss of emails that had been updated by Duke Energy customers, as well as some difficulty that Tendril experienced with importing AMI data from Duke Energy. The latter problem is being remedied with the implementation of a new data ingester, while the former is being addressed by a procedural change until the reconciliation process is automated. Other areas that were noted for potential improvement include improving the MyHER login requirements and Interactive profile questionnaire. The latter improvement is to address a larger concern among customers that the disaggregated energy use figures are not accurate.

### Survey Findings - DEC

Surveys of DEC treatment and control customers show that, among treatment group households:

- 93% recalled receiving at least one MyHER and 99% of those indicated that they “always” or “sometimes” read the reports.
- 87% reported being “very” or “somewhat” satisfied with the information provided by MyHERs.
- Only 28% of MyHER recipients are aware of MyHER Interactive, and only 8% of the aware recipients report that they have signed up to use it. When asked why they haven’t signed up to use MyHER Interactive, 30% of respondents reported that they were too busy, 22% reported that they were not interested in it, and 9% further reported that they did not know about it.
- Seventy-one percent of respondents strongly agree with the statement “I have learned about my household’s energy use from My Home Energy Reports”. Very few (12%) strongly agree with the idea that the energy usage information presented by the reports is confusing.
- The most useful features of the reports, as rated by treatment customer respondents, are the graphs that illustrate the home’s energy usage over time. The least useful-rated feature is customized suggestions for homes.
- 44% of treatment customers reported that MyHERs spurred them to undertake energy saving actions that they would not otherwise have done.
- Most (72%) respondents had no feedback or suggestions to improve the program. Those that made suggestions most frequently questioned the accuracy of the comparison, and requested more specific or detailed information in their MyHERs.

In comparing responses of treatment and control group respondents, there were a number of areas where treatment customers provided responses that more favorably reflected increased

awareness, engagement, or attitudes towards energy savings opportunities and actions relative to control customers:

- Treatment customers are significantly more likely than control customers to report having undertaken behaviors to reduce household energy use or having made energy efficiency improvements to their home (73% to 63%).
- Treatment group respondents were significantly more likely to have engaged in 7 (out of 10) energy saving behaviors and 1 (out of 9) energy efficiency improvement than control respondents.

An index designed to account for overall survey-wide differences in response patterns found a more positive response pattern (31 positive responses out of a total of 49 questions) for treatment customers in simple frequencies across many facets of the survey. Using standard statistical techniques (specifically, the non-parametric sign test), Nexant calculates the probability of randomly obtaining positive results for 31 of 49 questions is 2% and is not likely due to chance. We conclude that exposure to MyHER is positively affecting customer awareness of, engagement in, and attitudes towards energy savings opportunities and actions. MyHER is also implemented with the goal of increasing customer satisfaction with Duke Energy and its stance on Energy Efficiency. These survey results do not show evidence of a measurable uplift in satisfaction in DEC that can be attributed to MyHER.

### Survey Findings - DEP

Surveys of DEP treatment and control customers show that, among treatment group households:

- 94% recalled receiving at least one MyHER and 94% of those indicated that they “always” or “sometimes” read the reports.
- 80% reported being “very” or “somewhat” satisfied with the information provided by MyHERs.
- Only 35% of MyHER recipients are aware of MyHER Interactive, and only 14% of the aware recipients report that they have signed up to use it. When those who hadn't signed up for MyHER Interactive were asked why, 23% of respondents reported that they were too busy, 23% reported that they were not interested in it, 18% reported that they did not have either a computer or internet access, and another 10% reported that they actually did not know about it.
- 48% of treatment-only group members reported that MyHERs spurred them to undertake energy saving actions that they would not otherwise have done.
- Seventy-two percent of respondents agree with the statement: “I have learned about my household’s energy use from My Home Energy Reports”. Few (16%) strongly agree with the idea that the energy usage information presented by the reports is confusing.
- The most useful features of the reports, as rated by treatment customer respondents, are the graphs that illustrate the home’s energy usage over time. The least useful-rated feature is comparison to similar homes.

- More than half (57%) of respondents had no feedback or suggestions to improve the program. Those that made suggestions most frequently reflected a desire for more specific information or details about their home and specific actions they should take in their MyHERs.

In comparing responses of treatment and control group respondents, there were a number of areas where treatment customers provided responses that more favorably reflected increased awareness, engagement, or attitudes towards energy savings opportunities and actions relative to control customers:

- Treatment customers significantly more likely than control customers to report having undertaken behaviors to reduce household energy use or having made energy efficiency improvements to their home (71% to 60%).
- Treatment group respondents were significantly more likely to have engaged in 5 (of 10) energy saving behaviors and 5 (of 9) energy efficiency improvements than control respondents.
- Treatment group respondents reported significantly higher levels of satisfaction with the information Duke Energy makes available about energy efficiency programs, with the information Duke Energy provides to help customers save on energy bills, and with Duke Energy's commitment to promoting energy efficiency and the wise use of electricity.

An index designed to account for overall survey-wide differences in response patterns finds a more positive response pattern for treatment customers in simple frequencies across the entire survey. Thirty-six out of 40 questions show more favorable responses for the treatment group. Using standard statistical techniques (specifically, the non-parametric sign test), Nexant calculates the probability of randomly obtaining this result is nearly 0% and thus extremely likely due to chance. We conclude that exposure to MyHER is increasing awareness of, engagement in, and attitudes towards energy savings opportunities of treatment customers relative to control customers.

## 5 Conclusions and Recommendations

Nexant finds that the MyHER program is an effective channel for increasing customer engagement with energy efficiency and demand side management. The RCT program design facilitates reliable estimates of program energy savings. Further, the energy savings generated by the program are corroborated by survey findings of respondent awareness of, engagement in, and focus on the importance of saving energy. As an additional benefit, Nexant finds that MyHER is a useful tool for enhancing Duke Energy and increases uptake in other Duke Energy efficiency programs. The MyHER program has achieved full deployment among Duke Energy Carolinas and Progress single-family home customers and Nexant recommends that Duke Energy continue to focus on program processes and operations to further increase the efficiency of program delivery.

Duke Energy also launched the MyHER Interactive portal in March 2015. The portal offers additional means for customers to customize or update Duke Energy's data on their premises, demographics, and other characteristics that affect consumption and the classification of each customer. The portal also provides additional custom tips based on updated data provided by the customer. MyHER Interactive sends email challenges to portal users that seek to engage customer in active energy management, additional efficiency upgrades, and conservation behavior. Nexant evaluated the impacts of the MyHER Interactive portal using a matched comparison group because the MyHER Interactive portal was not deployed as a randomized controlled trial (RCT).

### 5.1 Impact Findings

Nexant estimates that the MyHER program saved a total of 292.2 GWh at Duke Energy Carolinas and 141.1 GWh at Duke Energy Progress during the period June 2017 to May 2018. The confidence and relative precision of the estimate is 90% and 6.4%, respectively for DEC and 9.4% for DEP. This impact estimate accounts for the fact that MyHER increases uptake of other Duke Energy programs; 6.0 kWh has been subtracted from the average household program impact to account for the MyHER uplift in other programs in both DEC and DEP. Without such a correction, those savings (6.0, kWh per household per year) would be double counted by Duke Energy.

Nexant estimates that DEC customers that sign up to use the MyHER Interactive Portal saved an additional 21 kWh per month, representing an additional 1.6% in energy savings during the period June 2017 to May 2018. These savings are statistically significant at the 90% level of confidence and are incremental, or over and above the savings that MyHER alone delivers. However, only a relatively small group of DEC MyHER recipients are signed up to use the portal, as of May 2018 38,190 DEC customers are Interactive users, out of 1,151,896 DEC MyHER recipients overall. It's important to note that since MyHER Interactive portal customers volunteered to participate in the portal product, their savings may not represent the expected

savings if all customers were assigned to the portal product by default. DEP MyHER participants do not generate statistically significant energy savings during the period June 2017 to May 2018.

## 5.2 Process Findings

The DEP and DEC MyHER programs are Duke Energy's most mature behavioral programs in terms of delivered energy savings in each jurisdiction. The large volume of data required to generate MyHER and support the program delivery schedule is the primary driver of program activities and focus. Duke Energy and its implementation contractor, Tendril, are successfully managing this process and providing DEP and DEC customers' valuable information for managing home energy consumption.

The DEP and DEC MyHER programs have benefited from a number of process and product management improvements. Careful change management and a stable operations team at Tendril have been key enablers of maintaining a production process that consistently meets MyHER quality control standards.

MyHER participants have been found in this evaluation's customer surveys to display higher levels or incidence of a number of energy savings behaviors, opinions, attitudes, and engagement with energy efficiency. MyHER is also positively affecting customer's perception of Duke Energy's public stance on energy efficiency for DEP, and some aspects of customers' monitoring and tracking household energy consumption habits in both DEC and DEP.

## 5.3 Program Recommendations

- **Continue the commitment to simultaneous control and treatment assignment.** New assignments to treatment and control groups must be simultaneous and Tendril and Duke Energy should work to add all newly assigned treatment and control groups to their respective statuses in a single billing month, to the extent that is technically feasible.
- **Continue the practice of making assignments of new accounts to MyHER treatment and control groups once a year, or at most, twice a year.** The numbers of Duke Energy customers becoming eligible for the program each year do not facilitate more frequent assignments. This is due to the fact that sufficient numbers of customers must be set aside for the control group each time a group of customers is assigned to treatment in order for the evaluator to be able to measure the energy savings delivered by the new cohort.
- **Increase MyHER participant awareness of Interactive.** The process evaluation finds that current awareness of Interactive among DEP and DEC MyHER participants is very low, so another program objective above actual engagement with Interactive is to more effectively get the word out about its existence.
- **Continue to drive engagement with the Interactive Portal.** MyHER Interactive's ability to deliver measurable energy savings is on the rise, as shown by this evaluation in comparison to the prior DEC evaluation, as well as the MyHER evaluations for other

Duke Energy jurisdictions completed in the past year. We recommend that Duke Energy continue to drive more MyHER participants to the portal.

- **Continue to operate MyHER with an eye towards change management.** MyHER's implementer Tendril has made great strides in improving quality control performance since the prior evaluation in the automating of this process. Effective change management and stable staffing have been notable contributors to these improvements and they should continue to be emphasized in MyHER program operations, especially as Tendril's new HER production platform, HOMERS (the Home Energy Reporting Service), is rolled out and its implementation is optimized.
- **Continue to prioritize the structuring of the processes and schedules for program elements.** This organization of tasks for elements such as the FFT report module has been a significant success in the operations of the MyHER program and has made reactive responses to impending deadlines and emergent challenges that characterized these operations in the past much less common. Program staff should seek out additional opportunities for the optimization of program schedules, tasks, and long term goals in this manner.

## Appendix A Summary Forms

### MyHER Carolinas Completed EMV Fact Sheet

#### Description of program

Duke Energy offers the My Home Energy Report (MyHER) to residential customers. MyHER relies on principles of behavioral science to encourage customer engagement with home energy management and energy efficiency. The program accomplishes this primarily by delivering a personalized report comparing each customer's energy use to a peer group of similar homes.

Date	July 10, 2019
Region(s)	Carolinas
Evaluation Period	June 2017 – May 2018
Annual kWh Savings	292,174,507 kWh (Report) 7,378,007 kWh (Portal)
Per Participant kWh Savings	247.7 kWh/home (Report) 255.1 kWh/home (Portal)
Coincident kW Impact	0.069 kW/home (Report) 0.071 kW/home (Portal)
Net-to-Gross Ratio	Not Applicable
Process Evaluation	Yes
Previous Evaluation(s)	2017 – Nexant 2014 – TecMarket Works

#### Evaluation Methodology

##### Impact Evaluation Activities

- Eligible accounts are randomly assigned to either a treatment (participant) group or a control group. The control group accounts are not exposed to MyHER in order to provide the baseline for estimating savings attributable to the Home Energy Reports. In this randomized controlled trial (RCT) design, the only explanation for the observed differences in energy consumption between the treatment and control group is exposure to MyHER.
- The impact estimate is based on monthly billing data and program participation data provided by Duke Energy.
- The RCT delivery method of the program removes the need for a net-to-gross analysis as the billing analysis directly estimates the net impact of the program.

##### Impact Evaluation Findings

- Realization rate = 108% for energy impacts; 247.7 kWh per home (Report)

##### Process Evaluation Activities

- 337 surveys of treatment customers, 211 surveys for control group customers and staff interviews.

##### Process Evaluation Findings

- 93% of MyHER recipients recall receiving the reports.
- 87% of MyHER recipients are “very” or “somewhat” satisfied with the information provided by the reports.
- 28% of MyHER recipients are aware of MyHER Interactive.
- MyHER produces an uplift in customer awareness of, engagement in, and attitudes towards energy savings opportunities and actions

## MyHER Progress

### Completed EMV Fact Sheet

Duke Energy offers the My Home Energy Report (MyHER) to residential customers. MyHER relies on principles of behavioral science to encourage customer engagement with home energy management and energy efficiency. The program accomplishes this primarily by delivering a personalized report comparing each customer's energy use to a peer group of similar homes.

Date	July 10, 2019
Region(s)	Progress
Evaluation Period	June 2017 – May 2018
Annual kWh Savings	141,099,476 kWh
Per Participant kWh Savings	201.2 kWh/home
Coincident kW Impact	0.071 kW/home
Net-to-Gross Ratio	Not Applicable
Process Evaluation	Yes
Previous Evaluation(s)	2017 – Nexant

## Evaluation Methodology

### Impact Evaluation Activities

- *Eligible accounts are randomly assigned to either a treatment (participant) group or a control group. The control group accounts are not exposed to MyHER in order to provide the baseline for estimating savings attributable to the Home Energy Reports. In this randomized controlled trial (RCT) design, the only explanation for the observed differences in energy consumption between the treatment and control group is exposure to MyHER.*
- *The impact estimate is based on monthly billing data and program participation data provided by Duke Energy.*
- *The RCT delivery method of the program removes the need for a net-to-gross analysis as the billing analysis directly estimates the net impact of the program.*

### Impact Evaluation Findings

- *Realization rate = 137% for energy impacts; 201.2 kWh per home*

### Process Evaluation Activities

- *347 surveys of treatment customers, 192 surveys for control group customers and staff interviews.*

### Process Evaluation Findings

- *94% of MyHER recipients recall receiving the reports.*
- *80% of MyHER recipients are “very” or “somewhat” satisfied with the information provided by the reports.*
- *35% of MyHER recipients are aware of MyHER Interactive.*
- *MyHER produces an uplift in customer awareness of, engagement in, and attitudes towards energy savings opportunities and actions*

## Appendix B Measure Impact Results

Table B-1: DSMore Measure Impact Results

Measure Category	Prod Code	Jurisdiction	Gross Energy Savings (kWh)	Gross Summer Coincident Demand (kW)	Gross Winter Coincident Demand (kW)	Net to Gross Ratio	Net Energy Savings (kWh)	Net Summer Coincident Demand (kW)	Net Winter Coincident Demand (kW)	Measure Life

## Appendix C Survey Instruments

### Primary Survey

Q1. Please rate how satisfied you are with Duke Energy as your electric supplier.

Not at all Satisfied						Completely Satisfied					
0	1	2	3	4	5	6	7	8	9	10	

Q2. Please rate your overall satisfaction with each of the following aspects of communications from Duke Energy.

	Very Satisfied	Somewhat Satisfied	Neither	Somewhat Dissatisfied	Very Dissatisfied
The information available about Duke Energy's efficiency programs.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Duke Energy's commitment to promoting energy efficiency and the wise use of electricity.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
The information Duke Energy provides to help customers save on energy bills.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Q3. Have you logged in to your Duke Energy account to do any of the following? Check all that apply.

- ☐ I have never logged in
- ☐ Pay my bill
- ☐ Review energy consumption graphs
- ☐ Look for energy efficiency opportunities or ideas
- ☐ None of the above

Q4. How often do you access the Duke Energy website to search for information about rebate programs, energy efficient products, or ways to make your home more energy efficient? Select only one.

- ☐ Monthly
- ☐ Once a year
- ☐ A few times a year
- ☐ Never

Q5. If you needed to replace major home equipment or were considering improvements to your home's energy performance today, how likely would you be to check the Duke Energy website for information about energy efficient solutions or incentives?

Not at all Likely						Extremely Likely					
0	1	2	3	4	5	6	7	8	9	10	

Q6. How important is it for you to know if your household is using energy wisely?

Not at all Important						Extremely Important					
0	1	2	3	4	5	6	7	8	9	10	

Q7. How would you rate your knowledge of the different ways you can save energy in your home?

Not at all Knowledgeable						Extremely Knowledgeable					
0	1	2	3	4	5	6	7	8	9	10	

Q8. Over the past 12 months, have you or another member of your household taken any actions to reduce your household energy use, or made any energy efficiency improvements in your home?

☐ Yes

☐ No – **Skip to Q12**

Q9. Which actions have been taken?

	Yes	No	Don't Know
Adjusted heating or cooling settings to save energy	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Reduced water heater temperature to save energy	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Wash clothes in cold water	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Fully load clothes washer	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Fully load dishwasher	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Turn off lights in unused or outdoor areas	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Unplug or shut down household electronics when not in use	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Maintain heating or cooling equipment for more efficient operation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Use a portable fan or ceiling fan for cooling instead of an air conditioner	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Other, please specify:			
Other, please specify:			

Q10. Which energy efficiency improvements have been made?

	Yes	No	Don't Know
Install energy-efficient kitchen or laundry appliances	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Install energy-efficient heating/cooling equipment	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Install energy-efficient water heater	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Replace windows or doors with more energy-efficient types	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Caulk or weatherstrip (windows or doors)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Add insulation to attic, walls, or floors	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Install energy-efficient lighting	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Install programmable thermostat or "smart" thermostat	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Purchase ENERGY STAR certified home electronic equipment (a television, for example)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

	Not at all Important									Extremely Important	
Initial cost of energy efficient equipment is too high	0	1	2	3	4	5	6	7	8	9	10
Not enough time to shop/research/install /Too busy	0	1	2	3	4	5	6	7	8	9	10
I do not have the expertise	0	1	2	3	4	5	6	7	8	9	10
I do not have enough information to make a decision or understand the impacts of these improvements or behaviors	0	1	2	3	4	5	6	7	8	9	10
Getting everyone in the house to cooperate is too hard	0	1	2	3	4	5	6	7	8	9	10
I do not think my energy saving efforts are worth the time and/or money	0	1	2	3	4	5	6	7	8	9	10

- ☐ Track monthly energy use
- ☐ Track the total amount of your bill
- ☐ Compare usage to previous months
- ☐ Compare usage to the same month from last year
- ☐ None of the above

	Not at all Useful								Extremely Useful			
Your home's energy use compared to that of similar homes	0	1	2	3	4	5	6	7	8	9	10	
Tips to help you save money and energy	0	1	2	3	4	5	6	7	8	9	10	
Examples of the energy use associated with common household items	0	1	2	3	4	5	6	7	8	9	10	
Customized suggestions for your home	0	1	2	3	4	5	6	7	8	9	10	
Graphs that display your home's energy use over time	0	1	2	3	4	5	6	7	8	9	10	
Information about services and offers from Duke Energy	0	1	2	3	4	5	6	7	8	9	10	

	Not at all Important							Extremely Important			
Reducing my energy bill(s)	0	1	2	3	4	5	6	7	8	9	10
Helping the environment	0	1	2	3	4	5	6	7	8	9	10
Setting an example for others	0	1	2	3	4	5	6	7	8	9	10
Avoiding waste	0	1	2	3	4	5	6	7	8	9	10
Conserving energy resources	0	1	2	3	4	5	6	7	8	9	10

Q15. Please indicate your level of agreement with each of the following statements:

	Strongly Disagree	Somewhat Disagree	Neither	Somewhat Agree	Strongly Agree
Duke Energy provides excellent customer service	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Duke Energy respects its customers	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Duke Energy provides service at a reasonable cost	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Q16. Before today, were you aware that you could order free or discounted lighting products through the Duke Energy website?

☐ Yes

☐ No – **Skip to Q17**

Q16a. How many **free** light bulbs have you ordered through the Duke Energy website this year? \_\_\_\_\_

Q16b. How many **discounted** light bulbs have you ordered through the Duke Energy website this year? \_\_\_\_\_

Q17. How could Duke Energy improve upon its service offerings to help you reduce your energy usage?

---

---

---

Q18. Do you own or rent this residence? ☐ Own ☐ Rent

Q19. Including yourself, how many people live in your home? \_\_\_\_\_

Q20. In what year was your home built? \_\_\_\_\_

Q21. How many square feet is the above-ground living space? \_\_\_\_\_

Q22. What is your primary heating fuel? ☐ Electricity ☐ Natural Gas ☐ Oil ☐ Other

Q23. In what year were you born? \_\_\_\_\_

**Thank you! Please return your completed survey using the enclosed envelope.**

NEXID

## Treatment-only Survey

Q1. Duke Energy sends a personalized report called *My Home Energy Report* to a select group of homes. These reports are mailed in a standard envelope every few months and are meant to provide you with information on how your home's electric energy usage compares with similar homes. Have you seen one of these reports?

☐ Yes

☐ No – **Skip to Q13**

Q2. About how many *My Home Energy Reports* have you received in the past 12 months? \_\_\_\_ **If zero, skip to Q13**

Q3. How often do you read the *My Home Energy Reports*?

☐ Always

☐ Sometimes

☐ Never – **Skip to Q13**

Q4. How much do you agree or disagree with the following statements about *My Home Energy Reports*?

Scale: 0 = Strongly Disagree; 10 = Strongly Agree

	Strongly Disagree										Strongly Agree									
I have learned about my household's energy use from <i>My Home Energy Reports</i> .	0	1	2	3	4	5	6	7	8	9	10									
I use the reports to tell me how well I am doing at saving energy.	0	1	2	3	4	5	6	7	8	9	10									
The tips provided in the reports are pertinent to my home.	0	1	2	3	4	5	6	7	8	9	10									
<i>My Home Energy Reports</i> provide the details I need to understand my home's energy use.	0	1	2	3	4	5	6	7	8	9	10									
I have discussed <i>My Home Energy Reports</i> with others.	0	1	2	3	4	5	6	7	8	9	10									
The information provided about my home's energy use is confusing.	0	1	2	3	4	5	6	7	8	9	10									
I suspect that the "similar" homes that my home is compared to in the <i>Home Energy Reports</i> are not actually like mine.	0	1	2	3	4	5	6	7	8	9	10									
I like receiving the <i>Home Energy Reports</i> .	0	1	2	3	4	5	6	7	8	9	10									
Since reading the <i>Home Energy Reports</i> , I have taken actions to use less energy than I would not have otherwise taken.	0	1	2	3	4	5	6	7	8	9	10									

Q5. How could Duke Energy make *My Home Energy Reports* more useful for your household? Please provide any suggestions you may have to improve the reports.

---

---

---

Q6. Please rate how useful each feature of the *Home Energy Report* is to you.

Scale: 0 = Not at all Useful; 10 = Extremely Useful

	Not at all Useful										Extremely Useful
Comparison to similar homes	0	1	2	3	4	5	6	7	8	9	10
Tips to help you save money and energy	0	1	2	3	4	5	6	7	8	9	10
Examples of the energy use associated with common household items	0	1	2	3	4	5	6	7	8	9	10
Customized suggestions for your home	0	1	2	3	4	5	6	7	8	9	10
Graphs that display your home's energy use over time	0	1	2	3	4	5	6	7	8	9	10
Information about services and offers from Duke Energy	0	1	2	3	4	5	6	7	8	9	10

Q7. Overall, how satisfied are you with the information in the *My Home Energy Reports* you've received?

Scale: 0 = Not at all Satisfied; 10 = Completely Satisfied

Not at all Satisfied										Completely Satisfied	
0	1	2	3	4	5	6	7	8	9	10	

Q7a. Why do you say that? \_\_\_\_\_

Q8. Are you aware that you can go online to *My Home Energy Interactive* to access more information, above and beyond that found in the *My Home Energy Report*, which describes more ways to save energy?

☐ Yes

☐ No – **Skip to Q9**

Q8a. Have you signed up to use *My Home Energy Interactive*?

☐ Yes

☐ No – **Skip to Q8c**

Q8b. How useful is *My Home Energy Interactive* to you for saving energy?

Scale: 0 = Not at all Useful; 10 = Extremely Useful

Not at all Useful										Extremely Useful

## Appendix G Awareness and Engagement

The increased engagement and awareness generated by the MyHER program can be difficult to measure. Nexant designed a survey approach that measures different aspects of the MyHER effect, but no one survey question can fully capture the numerous and subtle effects of MyHER that ultimately resulted in the observed energy impacts. Instead, one might expect the overall pattern of survey responses to signal a difference in behavior and attitudes between the MyHER treatment and control group.

Nexant developed a framework for measuring this pattern of MyHER influence by applying straightforward statistical concepts to develop a holistic look at the program's influence on customer behavior. While a single survey question may not result in statistically significant differences between the treatment and control group, if the treatment group responds more favorably than the control group to a set of survey questions, then we can estimate the probability that the collection of responses fits a hypothesis of MyHER influence.

Nexant assigned each survey question a category. [Table G-1](#) and [Table G-2](#) shows the categories, the count of questions in each category for which the treatment group provided a more favorable response than the control group, and the number of questions in each category, for each jurisdiction. A response is considered “favorable” if the treatment group gave a response that is consistent with the program objectives of MyHER.

**Table G-1: Classification of Survey Responses and Treatment Group “Success Rate” - DEC**

Question Category	Count of Questions where T>C	Number of Questions in Topic Area	Portion of Questions where T>C
Duke Energy's Public Stance on Energy Efficiency	3	3	100%
Customer Engagement with Duke Energy Website	2	5	40%
Customers' Reported Energy-savings Behaviors	10	11	91%
Customer's Reported Energy Efficiency Improvements Made	9	9	100%
Customer Motivation, Engagement & Awareness of Energy Efficiency	4	11	36%
Barriers of Customer Not Undertaking Energy Savings Actions	3	6	50%
Customer Satisfaction with Duke Energy	0	4	0%
<b>Total</b>	<b>31</b>	<b>49</b>	<b>63%</b>

**Table G-2: Classification of Survey Responses and Treatment Group “Success Rate” - DEP**

Question Category	Count of Questions where T>C	Number of Questions in Topic Area	Portion of Questions where T>C
Duke Energy's Public Stance on Energy Efficiency	3	3	100%
Customer Engagement with Duke Energy Website	2	5	40%
Customers' Reported Energy-saving Behaviors	10	11	91%
Customer's Reported Energy Efficiency Improvements Made	9	9	100%
Customer Motivation, Engagement & Awareness of Energy Efficiency	10	11	91%
Barriers of Customer Not Undertaking Energy Savings Actions	4	6	67%
Customer Satisfaction with Duke Energy	2	4	50%
<b>Total</b>	<b>40</b>	<b>49</b>	<b>82%</b>

If the MyHER program had no effect on participants' awareness, attitudes, and opinions, then we would expect the control group to score better than the treatment group on approximately half of the survey questions. The DEC treatment group provided answers consistent with a MyHER treatment effect in approximately 63% of the survey questions, and 82% in the case of DEP, which represents an uplift from the expected percentage of 50% if the null hypothesis were true. Thus we cannot make the case that MyHER had wide-ranging enhancing effects across all the various engagement and attitudinal areas probed by the survey. Using standard statistical techniques (the non-parametric sign test), Nexant calculates the probability of randomly obtaining this result in the case of DEC is 2% and in the case of DEP essentially 0%.

What do those 2% and 0% probabilities mean? Consider a series of coin flips. What is the probability of obtaining 40 heads in 49 coin flips if there is a 50/50 chance of obtaining a heads or tails on any one coin flip? This same principle can be applied to the survey: what is the probability that the treatment group gives a more favorable response to 40 out of 49 survey questions if MyHER has no influence on customer engagement and energy usage behavior? The answer, 0%, is “exceedingly low”. The same logic applies to the 2% probability we calculate for DEC. Thus we conclude that the survey responses in these two jurisdictions favorably affects DEC and DEP customer attitudes and actions related to energy-saving behavior.<sup>16</sup>

<sup>16</sup> The technical way of putting this is to say that we reject the hypothesis that MyHERs have no effect on customer engagement with energy-saving behaviors.

# 1. Evaluation Summary

## 1.1 Program Summary

The Duke Energy Carolinas' (DEC) and Duke Energy Progress' (DEP) Neighborhood Energy Saver Program (NES) provides one-on-one energy education, on-site energy assessments, and energy conservation measures to customers in selected low-income neighborhoods. These services are offered free of charge to all active DEC/DEP account holders who are individually metered homeowners and tenants living in predetermined income-qualified communities. Qualifying neighborhoods have at least 50% of households with incomes equal to or less than 200% of the federal poverty level<sup>1</sup>.

The program employs a neighborhood canvass approach to drive participation, while working with existing organizations in each community to maximize the number of customers benefitting from the program. Each year, program teams aim to reach approximately 4,500 customers in the DEP and 8,900 customers in the DEC service territory in several preselected communities throughout North and South Carolina.

The program period under evaluation is June 1st, 2017 through June 30th, 2018.

## 1.2 Evaluation Objectives

The objectives of the 2017-2018 NES Program evaluation are to:

- Review and update, as necessary, deemed savings estimates through a review of measure assumptions and calculations.
- Verify measure installation and persistence.
- Estimate program energy (kWh), summer and winter peak demand (kW) savings, and realization rates.
- If possible, discern the difference in energy savings between participating homes heated electrically from those heated with natural gas.
- Identify barriers to participation in the program and recommend strategies for addressing those barriers.
- Identify and characterize program strengths, which may include customer engagement and other non-energy benefits.
- Identify ways the DEP/DEC NES Program may be improved in the future.

<sup>1</sup> As of January 1, 2017, qualifying neighborhoods in the DEP service territory must meet this threshold. Previously, qualifying neighborhoods were those where 50% of households had incomes equal to or less than 150% of the federal poverty level.

To achieve these objectives, Opinion Dynamics completed a number of data collection and analytic activities, including interviews with program staff, a participant survey, an analysis of survey results, an analysis of program-tracking data, a deemed savings review, and an engineering analysis.

### 1.3 High Level Findings

Overall, NES Program teams in DEP and DEC territories implemented the program effectively and have achieved a high penetration rate in target neighborhoods. The program team served 15,312 participants across both territories and had a 69% penetration rate. There were 11,079 participants in the DEC service territory, 124% of the DEC participant target, and 4,233 participants in the DEP service territory, 94% of the DEP participant target. In addition, the evaluation found high levels of program satisfaction; 96% of DEP and 99% of DEC participants reported they were somewhat or very satisfied with the program overall, and 99% of participants from both territories reported they were somewhat or very satisfied with the equipment they received through the program.

#### Impact Evaluation

In previous NES evaluations, Opinion Dynamics used a billing analysis to determine program energy savings. However, due to differences in the usage patterns of the treatment and comparison groups and large differences in weather patterns between the pre- and post-treatment periods, a billing analysis was not feasible to evaluate this program cycle (see Section 4.3 for more details). As such, the team used an engineering analysis to determine both energy and demand savings. Table 1-1 and

Table 1-2 present the total gross energy and demand savings for each measure installed through the program and the estimated individual measure contribution to the overall energy (kWh) savings from the engineering analysis. The results are presented separately for each service territory.

**Table 1-1. Total Measure-Level Gross Energy Savings Results from Engineering Analysis**

Measures	DEP		DEC	
	Energy (MWh)	Percent of total MWh	Energy (MWh)	Percent of total MWh
Lighting	1,412	43%	2,842	38%

<b>Total</b>	<b>437</b>	<b>100%</b>	<b>428</b>	<b>100%</b>	<b>994</b>	<b>100%</b>	<b>921</b>	<b>100%</b>

During the 2017-2018 evaluation period, DEP participants saved an average of 779 kWh and DEC participants saved an average of 676 kWh per household (see Table 1-3).

**Table 1-3. Per Household Energy and Demand Savings**

Service Territory	Energy Savings (kWh)	Summer Peak Demand (kW)	Winter Peak Demand (kW)
DEP	779	0.103	0.101
DEC	676	0.090	0.083

Per household energy savings for this evaluation period were substantially higher than engineering estimates from previous evaluations. Higher savings per household in the 2017-2018 evaluation period were driven, in part, by a larger share of participants with electric space and water heating (Figure 1-1). Given the mix of measures offered through the NES Program, energy savings from domestic hot water and infiltration measures represent a large portion of potential program savings. To realize electric savings from these measures at the household-level, participants need to heat their homes or hot water with electricity. As such, a higher share of participants that heat with electric fuel will yield more energy savings per household.

**Figure 1-1. Share of DEP and DEC Participants with Electric Space and Water Heating**

## Process Evaluation

The research team focused the process evaluation on several questions related to energy education, behavior change, additional savings opportunities, NES participant satisfaction, and the overall effectiveness of the program. The full results are available in Section 4.3; key findings are summarized below.

- Program participation was strong in both service territories. Between June 1<sup>st</sup>, 2017 and June 30<sup>th</sup>, 2018, 4,233 DEP and 11,079 DEC customers participated in the NES Program. This represented 69% of households within targeted neighborhoods.
- Customer satisfaction was high in both service territories overall (96% of DEP and 99% of DEC participants were somewhat or very satisfied). Both DEP and DEC participants were also satisfied with the equipment they received (99% in both territories) and the NES Program representatives (99% and 91%, respectively).
- The majority of NES participants (91%) received in-person education and 89% thought that information helped them save energy in their homes. Additionally, participants reported that they were more knowledgeable about ways to save energy in their homes after their NES participation than they were before. As such, NES participants reported taking a range of additional energy saving actions in their homes (e.g., turning off lights more frequently, keeping doors and windows closed, washing clothing in cold water, etc.).
- Participants reported experiencing a variety of non-energy benefits after participating in the NES Program. The majority of NES participants reported noticing a decrease in their electric bill after participating (54%-DEP, 55%-DEC). Additionally, 92% of DEP and 84% of DEC participants felt that their home was less drafty, and 86% and 73%, respectively, reported noticing a change in the comfort of their home.

## 1.4 Evaluation Recommendations

Opinion Dynamics has the following recommendations for maintaining and improving program performance and overall savings. More details on these recommendations are included in Section 6.1 and throughout this report.

- **NES program teams should consider including space and water heating fuel types as additional criteria for identifying and selecting neighborhoods for future program years.** As the NES offers a relatively limited set of easy-to-install measures by design, domestic hot water and air infiltration measures will continue to contribute a substantial portion to total program savings. However, energy savings only manifest from those measures in households that heat their homes or their hot water with electricity. To maximize savings per participating household, NES Program staff should consider targeting neighborhoods with higher rates of electric space and water heating.
- **NES Program staff should continue to emphasize air infiltration measures.** While infiltration measures make an important contribution to overall program energy savings (14% of DEP and DEC participants), NES participants that receive those measures also report other valuable non-energy benefits. Of those that received infiltration measures, 92% of DEP and 84% of DEC participants reported that their home was less drafty and 86% and 73%, respectively, reported noticing a change in the comfort of their home. Of those who noticed a difference in home comfort, 90% of DEP and 80% of DEC felt that keeping a comfortable temperature in their home was easier after their NES participation. Air infiltration measures may be important in driving participant non-energy benefits in the future.
- **NES Program staff should continue to emphasize the in-person educational component of the program.** The majority of DEC and DEP participants (91%) receive in-person education from implementation teams and 89% find the educational component of the program useful in helping save energy in their homes. This sort of in-person education can provide a valuable touch point between program representatives and Duke Energy customers, and also encourages various different types of energy-saving behavior change (see Section 5.3.4).

## 2. Program Description

### 2.1 Program Design

The DEC and DEP NES Program offers direct-install measures and employs a neighborhood canvassing approach to drive participation. The goal is to offer persistent energy savings to income-qualified customers through the direct installation of energy-saving measures. The program also provides participating customers with information on the measures that they received and additional suggestions on ways to lower energy use. Implementation teams provide measures and services at no cost to customers and collaborates with existing neighborhood organizations to promote the program and maximize the number of customers benefitting from the receipt of energy conservation measures.

Neighborhoods can be selected to participate in the program if at least 50% of households in the neighborhood have incomes equal to or less than 200% of the federal poverty level<sup>2</sup>. Implementation teams aim to reach approximately 8,900 customers in the DEC service territory and 4,500 customers in the DEP service territory in several preselected communities throughout North Carolina and South Carolina. Participating households are limited to a one-time receipt of energy efficiency measures through the program.

### 2.2 Program Implementation

Honeywell Building Solutions (Honeywell) implemented the 2017-2018 DEC-DEP NES Program in partnership with Duke Energy program staff. The implementer performs all assessments and installations. DEC and DEP program staff are heavily involved in selecting specific neighborhoods based on program eligibility criteria.

Prior to participating in the program, residents in selected neighborhoods receive targeted mailings that provide introductory information about how to participate; the benefits of participation; and a notice that additional information from program staff will be circulated throughout their community, including additional mailings and a community launch event. The implementation team organizes at least one community launch event in each targeted neighborhood, both to make residents aware of the program and to provide demonstrations of the measures that the NES Program offers.

The implementation team records measure installation information at each premise, which Duke Energy tracks in its program-tracking database. Program representatives also record the location in which they installed lighting measures and faucet aerators (i.e., kitchen or bathroom), along with household characteristics, such as primary heating fuel type and the type of heating and cooling equipment present in each participating household. Finally, implementation teams leave behind educational materials that explain the measures that they install in each home, additional recommendations for how participants could save energy through behavioral changes, and information about other Duke Energy programs that may be of interest.

<sup>2</sup> As of January 1, 2017, qualifying neighborhoods in the DEP service territory must meet this threshold. Previously, qualifying neighborhoods were those where 50% of households had incomes equal to or less than 150% of the federal poverty level.

## 2.3 Program Performance

The program period under evaluation is June 1<sup>st</sup>, 2017 through June 30<sup>th</sup>, 2018. Over this period, the program teams served 15,312 households in 24 neighborhoods in North and South Carolina. Based on engineering estimates, participants save an average of 779 kWh per household per year in DEP territory and 676 kWh per household per year in the DEC territory. Energy and demand savings by service territory are displayed in Table 2-1.

**Table 2-1. Energy Savings per Household**

Per Household Savings	kWh	Summer kW	Winter kW
DEP	779	0.103	0.101
DEC	676	0.090	0.083

### 3. Overview of Evaluation Activities

To answer the research objectives outlined in Section 1.2, Opinion Dynamics performed a range of data collection and analytic activities, including:

- Interviews with DEP and DEC program staff;
- A review of program materials and program tracking data;
- Participant telephone survey
- An engineering analysis of deemed savings.

In Sections 4 and 4.3, we provide more details on the methods and results of the impact and process analyses, respectively. Below, we summarize the scope and approach for the staff interviews, the program materials and data review, the engineering analysis, and the participant survey. Each of these components supported either the impact or the process evaluations.

#### 3.1 Program Staff Interviews

Opinion Dynamics conducted an in-depth interview with program staff responsible for program administration in 2017-2018. The in-depth interview allowed us to discuss implementation of the NES Program in DEP and DEC territories, including differences between the DEP/DEC program and program implementation in other Duke Energy territories. We also used this interview to identify program successes, to discuss any difficulties in administering the program, and to determine any risks for the program achieving its goals.

#### 3.1 Program Materials and Data Review

DEC and DEP program administration staff provided Opinion Dynamics with information on the program. These data included the program marketing materials, program tracking databases, and other program documents—such as NES implementation requirements, educational procedures, and contractors' on-site auditing and direct installation procedures. Review of these materials informed development of the participant survey instrument and the engineering analysis.

Each of these materials is further described below.

- **Marketing Materials.** Opinion Dynamics reviewed the leave-behind brochure, the customer survey booklet, the pre-participation program informational brochure, the leave-behind door hanger, the energy efficiency brochure about other Duke Energy programs, the introduction letter to the NES Program and the informational session, examples of the presentation shown at the informational sessions, and postcards sent to participants with information about how to participate.
- **Program Databases.** The program staff provided Opinion Dynamics with program-tracking data from June 1<sup>st</sup>, 2017 to June 30<sup>th</sup>, 2018. The databases provided us with information on the quantities, location (in some cases), and types of measures installed in each treated household.
- **Program Documents.** The program documents that we reviewed included statements of work between Duke Energy and Honeywell as well as the NES Program guide. The guide explained the program

implementation process, including homeowner eligibility, communication, scheduling, and assessment and installation, as well as a description of installed measures.

## 3.2 Participant Survey

The purpose of the participant survey was to collect information to support the process evaluation and development of in-service rates. Opinion Dynamics implemented the survey as a computer-assisted telephone interviewing (CATI) survey between July 11<sup>th</sup> - August 1<sup>st</sup>, 2019. We completed a total of 140 interviews and achieved a response rate of 20.5%; the average length of the interviews was 22 minutes.

The survey sample frame consisted of 14,442 NES participants that enrolled between June 1<sup>st</sup>, 2017 and June 6<sup>th</sup>, 2018.<sup>3</sup> Our team removed 3,300 records that were missing phone numbers, 2,298 records that were on Duke's "Do Not Call" list, and 393 records that were duplicates. We developed a simple random sample of the remaining 8,451 records. The survey final sample frame consisted of a preliminary extract of 550 DEP and 630 DEC measure-level participant records.

To meet precision targets for measure-level installation and persistence analyses, the evaluation team set quotas for each measure. Quotas were set at 68 to ensure that analyses met the industry-standard two-tail 90/10 criterion in terms of sampling error at a measure level. This means that we would be 90% confident that our results are within 10% of the true value in the population.

## 3.3 Engineering Analysis

Opinion Dynamics conducted an engineering analysis to estimate energy and demand savings for the 2017-2018 evaluation period.<sup>4</sup> We first adjusted the per-unit savings for each measure based on the deemed savings review described in this section using the in-service rates developed through the participant survey (see Section 4.1). We then estimated total program savings by applying the adjusted per unit savings to each participant based on the package of measures they received, their heating fuel, and the presence or absence of different types of heating and cooling equipment.<sup>5</sup>

In previous evaluations of the NES Program, Opinion Dynamics has conducted a billing analysis to determine the net savings attributable to the NES Program during the evaluation period. While this approach has been successful in previous evaluations, we were unable to apply this method to the 2017-2018 DEC-DEP evaluation due to lack of equivalency between the treatment and comparison groups and differences in weather patterns for pre- and post-treatment years. The combination of both factors did not allow for our team to control for potential exogeneous effects that biased results. For more detail, see Section 4.3.

<sup>3</sup> Opinion Dynamics conducted a survey of participants from 11 months of the evaluation period to ensure that participants would be able to report feedback as close to their participation date as possible.

<sup>5</sup> For participants that did not have information related to heating/hot water fuel type or heating/cooling equipment in their homes tracked in the NES Program tracking data, Opinion Dynamics applied per-unit savings for specific measures weighted by the share of each population with the appropriate equipment and fuel type.

### 3.3.1 Deemed Savings Review

The primary goal of the deemed savings review is to develop updated savings algorithms and input assumptions that are consistent with standard industry practice and comparable with applicable Technical Reference Manuals (TRMs).

To conduct our deemed savings review, we performed the following steps:

- Reviewed the prior evaluation report, for the 2015–2016 NES Program years;
- Analyzed program tracking data to compile household characteristics (e.g., primary heating fuel type) to be used in estimating deemed savings for individual measures;
- Reviewed all other secondary information, including the program manual and the technical specifics of efficient equipment offered through the program; and
- Reviewed the latest Illinois, Indiana, and Mid-Atlantic TRMs, along with other recently published studies where relevant, to determine if there was a need for additional updates.

**Error! Reference source not found.** provides more detail on the methods used in the deemed savings review and engineering analysis.

## 3.4 Billing Analysis

In previous evaluations of the NES Program, Opinion Dynamics has conducted a billing analysis to determine the net savings attributable to the NES Program during the evaluation period. Opinion Dynamics attempted a billing analysis using a linear fixed effects regression (LFER) model; however, after testing several different model specifications, we determined that a billing analysis was not an effective method for evaluating NES Program impacts for the 2017-2018 evaluation period. Our team tested models that attempted to control for all household factors that do not vary over time by the individual constant terms in the equation. We used participants from the second half of 2018 and first half of 2019 as a comparison group. For more detail on our approach, see Section 4.3.

## 4. Gross Impact Evaluation

The gross impact evaluation for the 2017-2018 DEP/DEC NES Program consisted of two distinct steps: (1) verification of measure installation and continued operation; and (2) engineering analysis, including review of deemed savings values for incented measures. This section describes the methodologies and results of both steps.

### 4.1 Measure Verification

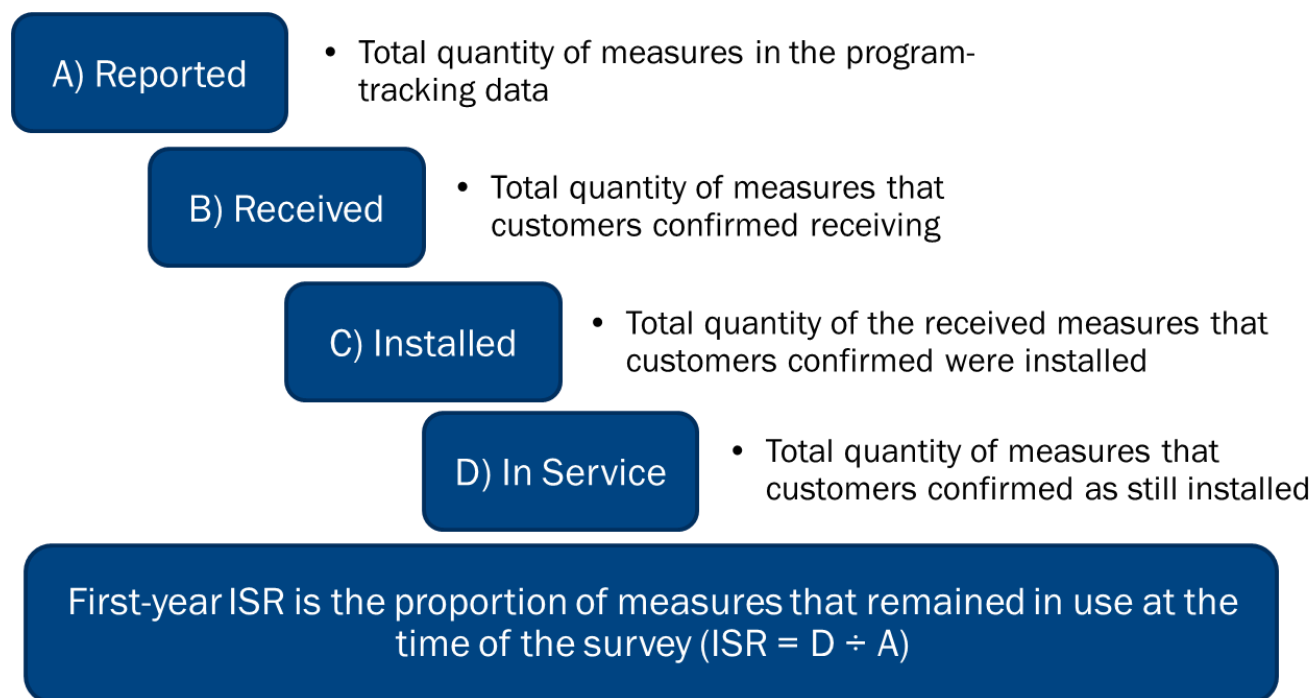

#### 4.1.1 Measure Verification Methodology

The participant survey included questions designed to verify that participants received and installed program measures and that those measures remained in place and operational. The “in-service rate” (ISR) for each measure represents the share of measures in the program-tracking data that was still in service at the time of the survey, based on 140 completed telephone interviews (70-DEP, 70-DEC).

Figure 4-1 outlines the method for deriving the ISR for each measure. During the survey, we asked participants to confirm that they received the quantity of measures recorded in Duke Energy's program-tracking data and, when necessary, to provide the correct quantity. We also asked participants to confirm the quantity of measures that were installed and remained in service at the time of the survey.

**Figure 4-1 In Service Rate Components**

Based on the survey responses, we calculated the verification, installation, and persistence rates, as well as the resulting ISR – using the equations shown below – for each participant and each measure they received. We then developed jurisdiction-specific averages of all four rates for each measure group (see Table 4-1).

$$1) \text{ Verification Rate} = \frac{(B)\text{Received Quantity}}{(A)\text{Reported Quantity}}$$

$$2) \text{ Installation Rate} = \frac{(C)\text{Installed Quantity}}{(B)\text{Received Quantity}}$$

$$3) \text{ Persistence Rate} = \frac{(D)\text{In Service Quantity}}{(C)\text{Installed Quantity}}$$

$$\text{First Year ISR} = \text{In Service Measures (D)} \div \text{Reported Measures (A)}$$

In previous evaluations of the NES Program, Opinion Dynamics found that participants were unable to verify certain measures (e.g., water heater temperature setbacks, water heater tank and pipe wraps). For these measures, we assumed 100% for all four rates. Additionally, for some air infiltration measures, such as caulking or glass patch tape, participants are unable to verify installation and persistence of individual measures. As such, we asked participants to verify installation of the entire package of air infiltration measures and assume 100% of those treatments remain installed. As all NES measures are installed directly by program staff and these measures specifically are difficult to remove, we feel that these assumptions are reasonable.

for this type of program. Finally, ISRs for HAVC filters are based on verification that participants received the filters, and changed their filters at least once per year.

## 4.1.2 Measure Verification Results

The results of this analysis showed high ISRs for measures in both DEP and DEC service territories, as shown in Table 4-1. Overall, both DEP and DEC participants reported that most measures were still in service at the time of the participant survey. All results are significant at the 90% confidence level with +/- 10% relative precision.

**Table 4-1. First Year Measure In-Service Rates**

Measure Category	DEP				DEC			
	Verification Rate	Installation Rate	Persistence Rate	ISR	Verification Rate	Installation Rate	Persistence Rate	ISR
LEDs	98%	100%	93%	92%	98%	100%	96%	94%
Low Flow Showerheads	100%	100%	96%	96%	99%	100%	98%	97%
Faucet Aerators	98%	100%	98%	97%	96%	100%	99%	94%
Infiltration Measures	94%	N/A	N/A	94%	92%	N/A	N/A	92%
HVAC Filters	90%	92%	N/A	83%	89%	90%	N/A	80%

## 4.2 Engineering Analysis

### 4.2.1 Engineering Analysis Methodology

The engineering analysis for the 2017-2018 NES Program consisted of a deemed savings review of each incented program measure and application of measure-specific ISRs to develop ex post program savings.

To develop per-unit savings, we used several resources. Since neither North Carolina nor South Carolina has a statewide TRM, we relied on the IL, IN, ARK, and Mid-Atlantic TRM and secondary sources, as necessary, for algorithms and assumptions. As NES implementation teams collect characteristics of participating households, our engineering team used inputs from the DEP and DEC program-tracking data wherever possible. For more information on the algorithms and inputs that our engineering team used to develop deemed savings estimates for each measure, see **Error! Reference source not found..**

When developing total program savings, Opinion Dynamics applied measure-specific per-unit savings estimates (excluding ISRs) to all participants who received each measure. Where savings for certain measures relied on households having specific heating/cooling equipment or fuel types, our engineering team only applied savings for those measures to participants who received them and had the appropriate

mix of fuel and equipment.<sup>6</sup> For example, NES implementation teams provide domestic hot water measures to all participants, regardless of the fuel they use to heat water in their homes. However, as Duke Energy only provides electricity to DEP and DEC customers, when developing total program savings, our team only applied savings for domestic hot water measures to participants that received them and heated their water with electricity. Once the engineering team applied savings appropriately to the participant population, we applied measure-level ISRs to develop total program savings. We then calculated per household savings by dividing total program savings by the total number of participants.

## 4.2.2 Engineering Analysis Results

This remainder of this section provides gross energy and demand savings estimates for each measure offered by the NES Program, along with total program savings and per household savings estimates for the 2017-2018 evaluation period.

### Ex-Post Deemed Savings Estimates

Table 4-2 provides the estimated gross per-unit energy and demand savings for all measures installed through the NES Program. As described in Section 3.3, we based the measure-level savings on secondary research and applied NES Program-specific assumptions on household characteristics, where applicable. The estimates shown below are for households with the appropriate mix of heating and cooling equipment, and electric heat or hot water. For example, savings from kitchen faucet aerators would only be realized by households with an electric water heater.

**Table 4-2. Ex Post Per-Unit Deemed Savings Estimates**

Measure	Energy savings (kWh)		Summer Peak Demand (kW)		Winter Peak Demand (kW)	
	DEP	DEC	DEP	DEC	DEP	DEC
<b>Lighting</b>						
LEDs (75W equivalent)	42	42	0.0061	0.0061	0.0030	0.0030
LEDs (60W equivalent)	33	33	0.0049	0.0049	0.0024	0.0024
LEDs (40W equivalent)	24	24	0.0035	0.0035	0.0017	0.0017
LEDs 5 W or similar - Candelabra Bulbs	21	21	0.0031	0.0031	0.0015	0.0015
LED 5 W or similar - Globes	21	21	0.0031	0.0031	0.0015	0.0015
<b>Domestic Hot Water</b>						
Low Flow Showerhead	226	255	0.0084	0.0081	0.0168	0.0162
Water Heater Insulation Wrap	105	96	0.0110	0.0110	0.0110	0.0110
Pipe Insulation (5 feet sections)	83	83	0.0094	0.0094	0.0094	0.0094

<b>Air Sealing</b>						
Infiltration Reduction	120	103	0.0295	0.0275	0.0190	0.0182
<b>HVAC</b>						

<sup>6</sup> For participants that did not have information related to heating/hot water fuel type or heating/cooling equipment in their homes tracked in the NES Program tracking data, Opinion Dynamics applied per-unit savings for specific measures weighted by the share of each population with the appropriate equipment and fuel type.

HVAC Filters	52	46	0.0147	0.0152	0.0112	0.0103
--------------	----	----	--------	--------	--------	--------

## Total Program Savings

Our team calculated total program savings by applying the per-unit estimates shown in Table 4-2 to each participant that received the corresponding measure.<sup>7</sup> We then applied the ISRs shown in Table 4-1 and, where applicable, multiplied the per-unit estimate by the measure quantity installed in each participating household. Table 4-3 below summarizes total gross program energy and demand savings, by jurisdiction and measure, for the 2017-2018 evaluation period.

**Table 4-3. Total Gross Program Savings**

Measure	Energy savings (kWh)		Summer Peak Demand (kW)		Winter Peak Demand (kW)	
	DEP	DEC	DEP	DEC	DEP	DEC
<b>Lighting</b>						
LEDs (60W equivalent)	1,163,401	2,195,813	172	325	83	157
LEDs 5 W or similar - Candelabra Bulbs	140,116	354,045	20.7	52.4	10	25.3
LEDs (75W equivalent)	59,798	91,262	8.85	13.5	4	6.53
LED 5 W or similar - Globes	44,762	164,478	6.62	24.3	3	11.8
LEDs (40W equivalent)	4,067	36,989	0.602	5.47	0.3	2.65
<b>Domestic Hot Water</b>						
Low Flow Showerhead	797,101	1,954,742	37.4	85.0	75	170
Kitchen Faucet Aerator	280,402	622,664	12.9	31.3	26	62.5
Pipe Insulation (5 feet sections)	97,387	423,152	11.1	48.3	11	48.3
Water Heater Insulation Wrap	71,352	266,243	8.14	30.4	8	30.4
Bathroom Faucet Aerator	53,622	110,904	4.85	10.9	10	21.7
<b>Air Sealing</b>						
Infiltration Reduction	436,437	955,256	106	253	155	308
<b>HVAC</b>						
HVAC Filters	149,881	313,208	47.9	115	43	76.0
<b>Total Program Savings</b>	<b>3,298,328</b>	<b>7,488,755</b>	<b>437</b>	<b>994</b>	<b>428</b>	<b>920</b>
<b>Savings per Household</b>	<b>779</b>	<b>676</b>	<b>0.103</b>	<b>0.090</b>	<b>0.101</b>	<b>0.083</b>

Using the total gross savings values from Table 4-3 and the total number of participants, we calculated per household energy savings of 779 kWh for DEP and 676 kWh for DEC neighborhoods. The majority of these savings are attributable to lighting and low-flow showerhead installations. As shown in Figure 4-2 lighting

<sup>7</sup> Certain measures only generate electric savings in households with electric space or water heating, or central cooling (i.e., domestic hot water, infiltration reduction, and HVAC filters). For these measures, we only applied savings to those households with the appropriate mix of electric heating, hot water, or cooling equipment. In cases where individual participants did not have space or water heating fuel type information in the program tracking data, we weighted per-unit savings by the share of participating households with the appropriate fuel type.

accounted for 1,427 MWh (43%) of overall savings in DEP territory and 2,892 MWh (38%) of savings in DEC territory. Low-flow showerhead installations accounted for 797 MWh (24%) and 1,975 MWh (26%) of savings in DEP and DEC territories, respectively.

**Figure 4-2 Measure Contribution to Total Energy (kWh) Savings**

### Comparison to Previous Impact Analyses

As noted earlier, due to drastically different weather patterns and an inequivalent comparison group, Opinion Dynamics was unable to rely on a billing analysis and determined that an engineering analysis was a more reasonable approach to estimating ex post program impacts for this evaluation period. To ensure that engineering analysis results can be a reliable proxy for billing analysis results for the NES Program, we compared impact results from the two methods derived for previous DEP and DEC evaluations. Table 4-4 below provides per household energy savings estimates for both methods, based on DEP and DEC evaluations for the 2014 and 2015 program years, along with the ratio of the billing-to-engineering estimates. The results show generally good agreement of the two methods.

**Table 4-4. Historical Per Household Billing-to-Engineering Savings Comparisons**

Service Territory and Evaluation Year	Per Household Savings Estimates (kWh)		Ratio of Billing/Engineering
	Billing Analysis	Engineering	
DEP 2014	367	379	97%
DEP 2015	430	478	90%
DEC 2015	347	333	104%

When compared with per household savings estimates from previous years, results from the 2017-2018 evaluation period are higher (see Table 4-5). There are two main factors that may contribute to this. First, as seen in Table 4-5, participants in the 2017-2018 evaluation period had higher rates of electric water, space heating, and central air conditioning, so energy savings from domestic hot water, air infiltration, and HVAC measures applied to a larger share of participants. Also, Opinion Dynamics made updates to certain

parameters used in estimating per-unit savings during the deemed savings review based on more recent editions of technical resources (see **Error! Reference source not found.**).

**Table 4-5. Comparison of Per Household Savings Estimates and Characteristics**

	DEP			DEC	
	2014	2015	2017-2018	2015	2017-2018
<i>Per Household kWh Estimates (Engineering)</i>	379	478	779	333	676
Share of Participants with Electric Hot Water	72%	81%	84%	69%	83%
Share of Participants with Electric Heat	49%	61%	95%	49%	77%
Share of Participants with Central AC	50%	66%	77%	64%	72%

### Measure Installation

To evaluate the success of the program in providing energy-saving measures to participants, and to determine if there were missed savings opportunities or measures that were being provided less frequently than in past years, Opinion Dynamics examined the number of measures provided to each home. Table 4-6 shows the share of homes that received at least one of each measure and the average quantity installed per home. DEP and DEC territories had similar measure mixes overall, although homes in DEC territory had a fewer LEDs installed on average than homes in DEP territory (12.2 compared to 9).

**Table 4-6. Measure Installation Rates from Program-Tracking Data**

Measure Category	Measure	DEP		DEC	
		Percent of Projects with Measure	Average Qty Per HH	Percent of Projects with Measure	Average Qty Per HH
Lighting	LEDs (60W equivalent)	93%	9.3	85%	6.3
	LEDs 5 W or similar - Candelabra Bulbs	38%	1.8	33%	1.6
	LED 5 W or similar - Globes	14%	0.6	18%	0.8
	LEDs (75W equivalent)	5%	0.5	3%	0.2
	LEDs (40W equivalent)	1%	<0.1	2%	0.1
Hot Water	Kitchen Faucet Aerator	85%	0.9	78%	0.8
	Low Flow Showerhead	82%	1.1	71%	0.9
	Bathroom Faucet Aerator	78%	1.1	71%	0.9
	Pipe Insulation (5 feet sections)	19%	0.3	29%	0.5
	Water Heater Insulation Wrap	18%	0.2	25%	0.3
Infiltration Reduction	Caulking	77%	0.8	78%	0.8
	Weather-stripping per door	70%	1.1	73%	1.1
	Foam Insulation	53%	0.6	57%	0.6
	Door Sweep	51%	0.8	40%	0.5
	Cover for A/C	24%	0.4	26%	0.5
	Poly Tape	0.3%	<0.1	3%	<0.1
HVAC	HVAC Filters	74%	9.2	68%	8.1
Education/Other	Water Heater Temp Check	94%	1	95%	1

	Thermometer	97%	1.0	94%	0.9
	Refrigerator coil brush	--	--	0.1%	<0.1

### 4.3 Billing Analysis

In previous Duke NES evaluations, Opinion Dynamics conducted a billing analysis to determine the overall evaluated net savings of the NES Program. Billing analyses capture savings attributable to the program, including installed measures, behavioral changes, and participant spillover. In past DEP and DEC evaluations, we have compared the energy usage of the treatment group, those that participated in the NES Program during the evaluation period, with the usage of a comparison group. Comparison groups must have similar usage patterns to those in the treatment group prior to their enrollment in the program. To avoid self-selection bias, i.e. the correlation between the propensity to participate in a program and energy use, in previous DEP and DEC evaluations, we used future NES participants as the comparison group.

As billing analyses require a comparison between energy usage between pre- and post-treatment periods, successful analyses control for differences in weather patterns between the two periods. In cases of large weather differences between the two periods, the use of an equivalent comparison group is critical to control for other changes in behavior that may coincide with major weather differences. Figure 4-3 shows how the energy consumption differed between the treatment and comparison group from the early 2016 to early 2019. While usage patterns varied between the two groups in both service territories, DEP treatment and comparison groups were particularly incompatible in terms of energy consumption.

**Figure 4-3. Treatment and Comparison Group Energy Usage**

Across both service territories, the evaluation period was substantially colder than the pre-treatment period. Figure 4-4, shows the differences in average monthly temperatures between the two time periods. With inequivalent comparison groups, and substantially different weather patterns from year-to-year, models were unable to control for exogenous factors that may have influenced energy usage in NES participant households.

**Figure 4-4. Average Monthly Temperature**

### 4.3.1 Model Results

Opinion Dynamics tested several different model specifications and determined that, due to the wide variation in modeled results largely driven by the 2 factors discussed in this section, a billing analysis was not an appropriate method for evaluating the impacts for the 2017-2018 NES evaluation period. Table 4-7 below shows the parameter estimates from the final model.

**Table 4-7. Results of Billing Analysis Model Parameter Estimates**

Variable	DEP		DEC	
	NC	SC	NC	SC
NES Participation (i.e., treatment effect)	7.624**	-0.650	-1.910**	1.775
Cooling Degree Days (CDD)	2.084**	1.946**	1.862**	1.513**
Heating Degree Days (HDD)	1.533**	1.893**	0.995**	1.193**
Post-Participation Period CDD	-0.336**	1.432**	-0.654**	0.528**
Post-Participation Period HDD	-0.392**	0.117	0.162**	-0.122*

\* p<0.05, \*\* p<0.01.

## 5. Process Evaluation

### 5.1 Researchable Questions

Based on experience evaluating this program in previous years and discussions with DEC and DEP program staff, Opinion Dynamics developed the following process-related research questions:

- What are the major strengths of the program? Are there specific ways that the program could be improved to be more effective in the future?
- What are the barriers to implementing this program—that is, are there limiting factors to achieving greater participation and realizing additional program attributable savings?
- Do NES participants realize other non-energy benefits as a result of their participation, and, if so, what are the most common?
- Would NES participants benefit from, or like, additional follow-up communication from the program after their participation? What communication methods would be effective?

### 5.2 Methodology

The process evaluation relied on the following tasks (see Section 3 for additional detail):

- in-depth interview with program staff at DEC and DEP;
- A review of secondary materials (i.e., Honeywell Scope of Work, NES marketing materials, NES Program guide, and program evaluations from previous years);
- Telephone survey of program participants
- An analysis of program tracking data.

### 5.3 Key Findings

#### 5.3.1 Program Participation

The program years 2017 and 2018 were the eighth and ninth years of the NES Program in Duke Energy's North and South Carolina territories. Between June 1<sup>st</sup>, 2017 and June 30<sup>th</sup>, 2018, the NES Program teams served 24 neighborhoods in total, 17 in DEC territory and 7 in DEP territory. The NES Program team treated 11,079 DEC and 4,233 DEP customers, 15,312 in total. Figure 5-1 below provides a comparison of program participation over the past 4 years. Overall, staff reached 69% of customers across all neighborhoods served during the 2017-2018 evaluation period.

**Figure 5-1 NES Program Participation 2013-2018**

### Cross Participation

There were high levels of cross participation in other Duke Energy programs among NES participants from June 1<sup>st</sup>, 2017 and June 30<sup>th</sup>, 2018. As shown in Table 5-2 below, 79% of DEP and 83% of DEC participants also participated in another Duke Energy program, most of them prior to having NES measures installed in their homes (67% and 71%, respectively).

**Figure 5-2. Cross Participation Before and After NES Participation**

Table 5-1 shows the number of cross participants in other Duke Energy programs. The largest number of DEP cross participants also enrolled in the My Home Energy Report Program, while the largest number of DEC participants also enrolled in the Smart \$aver Residential program.

**Table 5-1. Count of NES Cross Participants by Program**

Program	DEP	DEC
My Home Energy Report	3,164	1,450
EnergyWise Home	556	0
Single Family Water Measures	320	0
Smart \$aver Residential	118	8,546
Home Energy Improvement	92	0
Residential Energy Assessment	64	108
Energy Efficiency Behavior	54	0
Appliance Recycling Program	25	64
Residential EE Products & Services	6	767
Residential Demand Response	0	727
<b>Total Unique Cross Participants</b>	<b>3,315</b>	<b>9,265</b>

### 5.3.2 Marketing and Outreach

For each neighborhood, Duke program staff and implementation teams conduct both broad and targeted outreach aimed at encouraging program participation and educating communities about energy efficiency. Program teams first send customized introductory letters to neighborhood residents that provide information on the measures that the program offers, the monetary savings that participants can achieve by enrolling, and information about how to participate. The introductory letter also notes any local community organizations that program teams have partnered with and provides information about the community launch event for their neighborhood. In coordination with the implementation teams, program staff conduct a community launch event for each neighborhood, introducing the NES Program, the implementation teams, and showing residents, the types of energy efficiency measures offered through the NES Program. Program teams also send follow up postcards reminding residents about the NES Program and, for those not home when an implementation team knocks on their door, crews leave behind door hangers that provide an option to schedule an appointment to have measures installed.

Figure 5-3 shows participant responses about how they first heard about the NES Program. In both service territories, the most common way that participants heard about the program was through a direct mail or door hanger (DEP-48%, DEC-42%). The second most common method was from a program representative who visited the home (DEP-36%, DEC-39%). These responses indicate that the initial contacts made by program teams are an effective form of outreach.

Figure 5-3. How Participants First Heard About the NES Program

### 5.3.3 Program Satisfaction

Both DEP and DEC participants are satisfied with all components of the program. As shown in Figure 5-4, 96% of DEP and 98% of DEC participants reported that they were somewhat or very satisfied with the program overall, and 99% of participants from both territories reported that they were somewhat or very satisfied with the equipment they received through the program.

**Figure 5-4 Satisfaction with NES Program and Equipment**

In addition, participants are very satisfied with program representatives, including implementation teams (Figure 5-5). Ninety-nine percent of DEP and 91% of DEC participants reported they were satisfied with their NES Program representatives.

**Figure 5-5 Participant Satisfaction with NES Program Representatives**

### 5.3.4 Additional Benefits

An important customer benefit of the NES Program is the energy education that customers receive at the time of home visits. Prior to participation, customers received some information about ways to save energy through mailings and flyers either left at their home or provided at the community launch event. Additionally, at the neighborhood launch event, program staff discuss the energy-saving measures that Duke Energy offers through the NES Program and how each measure saves energy in participants' homes. Implementation teams also provide important education to participants while on site. During measure installation, implementation teams provide more detail on energy saving measures, discuss other ways that participants might change their behavior to save more energy, and answer participant questions. Implementation teams then leave

behind information to reinforce the energy education, provide other tips for saving energy in their home, and information about other Duke Energy programs that participants may be eligible for.

Eighty-nine percent of DEP and all of DEC participants reported receiving in-person recommendations or energy saving tips from implementation teams. The vast majority of those participants found that information useful in helping them save energy (DEP-94%, DEC-87%). In addition, 99% of DEP participants and 87% of DEC participants said that they received educational materials during their home visit. Of those that received these materials, most found them useful in helping save energy in their homes (DEP-88%, DEC-75%).

Participants across both service territories reported that their knowledge increased after their enrollment in the NES Program. Prior to participation, 70% of DEP participants and 60% of DEC participants reported that they were knowledgeable about ways to save energy in their homes, providing a mean rating of 6.6 (DEP) and 6.5 (DEC) on a scale of 0 to 10, where 0 means “not at all knowledgeable” and 10 means “very knowledgeable.” After participation, 96% of DEP participants and 94% of DEC participants reported that they were knowledgeable, providing a mean rating of 9.0 and 8.4, respectively (Figure 5-6).

**Figure 5-6 Participant Knowledge of Ways to Save Energy**

Both DEP and DEC participants are motivated to reduce their energy use. Eighty-eight percent of DEP and 90% of DEC participants were motivated to reduce their energy use after participating in the NES Program (Figure 5-7).

**Figure 5-7 Motivation to Reduce Energy Use after NES Program Participation**

Participants that received the leave behind materials take other actions to save energy in their home. Most frequently, participants reported turning lights off more frequently, keeping doors and windows closed, cleaning their dryer's lint screen, and closing curtains and shades at night (Figure 5-8).

**Figure 5-8 Energy Saving Actions Taken (multiple responses)**

Over half of participants in both service territories reported noticing a decrease in their electric bill since participating in the NES Program (DEP-58%, DEC-57%). Additionally, participants report several non-energy benefits. Notably, 92% of DEP and 84% of DEC participants felt that their home was less drafty, and 86% and 73%, respectively, reported noticing a change in the comfort of their home. Of those who noticed a difference in home comfort, 90% and 80% of DEP and DEC participants, respectively, felt that keeping a comfortable temperature in their home was easier after their NES participation. Table 5-2 lists additional non-energy benefits, and the share of DEP and DEC participants that experienced each.

**Table 5-2 Non-Energy Benefits Reported by Participants**

Non-Energy Benefit	DEP		DEC	
	Percent of Participants	n	Percent of Participants	n
I like the light level better in my home	90%	69	86%	64
I feel like I'm doing something good for the environment	95%	65	93%	68
My home is less drafty	92%	64	84%	64
My home is quieter; I hear less noise from the outside	61%	67	51%	63
I have fewer maintenance costs	81%	62	68%	57

### 5.3.5 Additional Opportunities for Program Savings

One objective of the process evaluation was to determine if there are opportunities for increasing program savings. For example, some income-qualified programs provide energy-efficient replacements for older, inefficient appliances. Further, with the increasing efficiency of existing standard lighting, some programs are offering LEDs and other specialty lighting options.

#### Lighting

There is limited opportunity for additional savings from lighting measures beyond the LEDs already offered through the NES Program. Twenty-five percent of participants reported that some bulbs were not replaced during their NES installation visit. Figure 5-9 several reasons that participants gave for not having all of their bulbs replaced with program LEDs. Most commonly, participants reported that they had already received the maximum number of LEDs (40%) or that an efficient bulb was already in place (37%). This suggests that, while lighting remains an important component of the NES Program, the potential for additional savings from lighting in the future may be limited as LEDs become more common in the residential market.

**Figure 5-9. Reasons for Not Replacing Bulbs with Program LEDs**

### Air Conditioning and Refrigeration

There is also limited opportunity for additional savings from replacing old window air conditioner units and refrigerators. Forty-one percent of participants reported having window air conditioning units in their home, and the majority (67%) were between 1 and 5 years old. Additionally, 43% of participants reported their refrigerator was between 1 and 5 years old. Figure 5-10 shows the age distribution of both appliances in participating households.

**Figure 5-10. Window AC and Refrigerator Age Distribution**

## 6. Conclusions and Recommendations

Opinion Dynamics conducted an engineering analysis to estimate gross energy and demand savings for the DEP and DEC NES Programs from June 1<sup>st</sup>, 2017 through June 30<sup>th</sup>, 2018. Table 6-1 presents both per household ex post impacts and total program savings.

**Table 6-1 Comparison of 2017 Engineering Savings Estimates**

Service Territory	Gross Annual Savings per Household			Gross Program Savings		
	Energy (kWh)	Summer Coincident Demand (kW)	Winter Coincident Demand (kW)	Energy (MWh)	Summer Coincident Demand (MW)	Winter Coincident Demand (MW)
DEP	779	0.103	0.101	3,298	0.437	0.428
DEC	676	0.090	0.083	7,449	0.994	0.921

Key findings, which we discuss below, include:

- Per household savings increased for both service territories when compared to engineering estimates in past DEP and DEC evaluations;
- NES participation was strong for this evaluation period and participants are highly satisfied with the program;
- The educational component of the NES Program is effective, and the majority of participants are engaged with the implementation teams during the measure installation visit; and
- NES participants experienced additional non-energy benefits, such as lower energy bills and increased comfort.

### Per Household Savings

During this evaluation period, DEP participants saved 779 kWh and DEC participants saved 676 kWh per household, as determined by our engineering analysis. Per household energy savings for this evaluation period were substantially higher than engineering estimates from previous DEP and DEC impact evaluations. Higher savings per household in the 2017-2018 evaluation period were driven, in part, by a larger share of participants with electric space and water heating (Figure 6-1). Given the mix of measures offered through the NES Program, energy savings from domestic hot water and infiltration measures represent a large portion of potential program savings. To realize electric savings from these measures at the household-level, participants need to heat their homes or hot water with electricity. As such, a higher share of participants that heat with electric fuel will yield more energy savings per household.

**Figure 6-1. Share of DEP and DEC Participants with Electric Space and Water Heating**

### Program Participation and Satisfaction

The program teams achieved strong participation during the 2017-2018 evaluation period. DEP program teams reached 4,233 households (94% of the annual target) and 11,079 DEC households (124% of the annual target). Additionally, across both service territories, program teams reached 69% of households within targeted neighborhoods.

Satisfaction with the NES Program is also very high amongst participants. Seventy-six percent of DEP and 79% of DEC participants were very satisfied with the NES Program, and 80% of DEP and 83% of DEC participants were very satisfied with the equipment they received.

### Energy Education

The vast majority (91%) of participants received in-person education and 89% thought that information helped them save energy in their homes. Additionally, participants reported that they were more knowledgeable about ways to save energy in their homes after their NES participation than they were before (70%-DEP and 60% DEC before compared with 96%-DEP and 94% DEC after). As such, NES participants reported taking a range of additional energy saving actions in their homes (e.g., turning off lights more frequently, keeping doors and windows closed, washing clothing in cold water, etc.). See section 5.3.4 for additional details.

### Non-Energy Benefits

NES participants reported several non-energy benefits; including less drafty homes (92%-DEP, 84%-DEC), increased comfort (86%-DEP, 73% DEC), and the ability to more easily keep their homes at a comfortable temperature (90%-DEP, 80%-DEC). Additionally, 54% of DEP and 55% of DEC participants reported that their electric bill had gone down after participating in the NES Program.

## 6.1 Recommendations

- **NES program teams should consider including space and water heating fuel types as additional criteria for identifying and selecting neighborhoods for future program years.** As the NES offers a relatively limited set of easy-to-install measures by design, domestic hot water and air infiltration measures will continue to contribute a substantial portion to total program savings. However, energy savings only manifest from those measures in households that heat their homes or their hot water with electricity. To maximize savings per participating household, NES Program staff should consider targeting neighborhoods with higher rates of electric space and water heating.
- **NES Program staff should continue to emphasize air infiltration measures.** While infiltration measures make an important contribution to overall program energy savings (14% of DEP and DEC participants), NES participants that receive those measures also report other valuable non-energy benefits. Of those that received infiltration measures, 92% of DEP and 84% of DEC participants reported that their home was less drafty and 86% and 73%, respectively, reported noticing a change in the comfort of their home. Of those who noticed a difference in home comfort, 90% of DEP and 80% of DEC felt that keeping a comfortable temperature in their home was easier after their NES participation. Air infiltration measures may be important in driving participant non-energy benefits in the future.
- **NES Program staff should continue to emphasize the in-person educational component of the program.** The majority of DEC and DEP participants (91%) receive in-person education from implementation teams and 89% find the educational component of the program useful in helping save energy in their homes.. This sort of in-person education can provide a valuable touch point between program representatives and Duke Energy customers, and also encourages various different types of energy-saving behavior change (see Section 5.3.4).

## 7. DEP Summary Form

### Neighborhood Energy Saver Program

Completed EMV Fact Sheet

The Neighborhood Energy Saver (NES) program provides a home energy assessment free of cost and installs energy-saving measures in the homes of income-qualified customers living in DEP service territory. During the assessment, program representatives discuss what was installed and provide additional recommendations on ways participants can save energy in their homes.

Date	December 6 <sup>th</sup> , 2019
Region(s)	Duke Energy Progress, North Carolina and South Carolina
Evaluation Period	June 1 <sup>st</sup> , 2017-June 30 <sup>th</sup> , 2018
MWh Savings	3,298
Coincident MW Impact	0.437 (Summer) 0.428 (Winter)
Per Participant kWh Savings	779
Measure Life	Not evaluated, so remains unchanged at 7 years
Net-to-Gross Ratio	N/A
Process Evaluation	Yes
Previous Evaluation(s)	January 2017, January 2016

### Evaluation Methodology

The evaluation team performed an engineering analysis to estimate ex-pot energy and demand savings. The consisted of (1) a review of deemed savings estimates using an engineering analysis of savings assumptions and calculations and (2) verification of measure installation and persistence through a participant survey. To determine total program savings, the evaluation team applied (1) measure-specific per-unit savings estimates to participants who both received each measure and had the appropriate mix of fuel and equipment and (2) measure-specific ISRs.

### Impact Evaluation Details

- Neighborhoods in DEP service territory where at least 50% of residential customers are at or below 200% of the federal poverty guidelines are eligible to participate in the NES Program.
- The engineering team developed updated deemed savings values for individual measures.
- The evaluation team developed measure-specific in-service rates and made adjustments to per-unit savings based on the share of measure in operation at the time of the survey.
- Applied adjusted per-unit savings to each participant and multiplied by the quantity received. The team only applied savings for measure dependent on certain fuel types or other parameters (i.e., domestic hot water, air infiltration, and HVAC filters) to the applicable households.

## 8. DEC Summary Form

### Neighborhood Energy Saver Program

Completed EMV Fact Sheet

The Neighborhood Energy Saver (NES) program provides a home energy assessment free of cost and installs energy-saving measures in the homes of income-qualified customers living in DEC service territory. During the assessment, program representatives discuss what was installed and provide additional recommendations on ways participants can save energy in their homes.

Date	December 6 <sup>th</sup> , 2019
Region(s)	Duke Energy Carolinas, North Carolina and South Carolina
Evaluation Period	June 1 <sup>st</sup> , 2017- June 30 <sup>th</sup> , 2018
MWh Savings	7,489
Coincident MW Impact	0.994 (Summer) 0.921 (Winter)
Per Participant kWh Savings	676
Measure Life	Not evaluated, so remains unchanged at 7 years
Net-to-Gross Ratio	N/A
Process Evaluation	Yes
Previous Evaluation(s)	December 2016

### Evaluation Methodology

The evaluation team performed an engineering analysis to estimate ex-pot energy and demand savings. The consisted of (1) a review of deemed savings estimates using an engineering analysis of savings assumptions and calculations and (2) verification of measure installation and persistence through a participant survey. To determine total program savings, the evaluation team applied (1) measure-specific per-unit savings estimates to participants who both received each measure and had the appropriate mix of fuel and equipment and (2) measure-specific ISRs.

### Impact Evaluation Details

- Neighborhoods in DEC service territory where at least 50% of residential customers are at or below 200% of the federal poverty guidelines are eligible to participate in the NES Program.

# 1 Executive Summary

## 1.1 Program Summary

The Save Energy and Water Kit Program (SEWKP) is a Duke Energy offering that provides free energy saving and water efficiency kits to pre-selected households in the Duke Energy Carolinas (DEC) and Duke Energy Progress (DEP) jurisdictions. The kits include aerators for kitchen and bathroom sink faucets, showerheads, and insulating water heater pipe tape.

## 1.2 Evaluation Objectives and Results

This report presents the results and findings of evaluation activities for DEC and DEP SEWKP conducted by the evaluation team, collectively Nexant Inc. and our subcontracting partner Opinion Dynamics, for the program year of September 2018 – August 2019.

### 1.2.1 Impact Evaluation

The evaluation team conducted the evaluation as detailed in this report to estimate energy and demand savings attributable to the programs. The evaluation was divided into two research areas - to determine gross savings and net savings (or impacts). Gross impacts are energy and demand savings estimated at a participant's home that are the direct result of the homeowner's installation of the measures included in the SEWKP kit. Net impacts reflect the degree to which the gross savings are a result of the program efforts and funds.

Table 1-1, Table 1-2, and Table 1-3 present the summarized findings of the impact evaluation for the DEC jurisdiction. All totals in Table 1-1, excluding the population, are weighted averages based on the 2018-2019 evaluation sample and represent expected savings from the average participant.

**Table 1-1: DEC Energy Savings per Kit**

Kit Size	Population	Reported Energy (kWh)	Energy Realization Rate	Gross Verified Energy (kWh)
Small	26,364	333	145%	482
Medium	17,750	564	125%	706
<b>Program Total</b>	<b>44,114</b>	<b>426</b>	<b>134%</b>	<b>572</b>

**Table 1-2: DEC Demand Savings per Kit**

Kit Size	Summer Demand (kW)			Winter Demand (kW)		
	Reported	Realization Rate	Gross Verified	Reported	Realization Rate	Gross Verified
Small	0.114	36%	0.042	0.073	168%	0.123
Medium	0.188	32%	0.061	0.129	148%	0.191
<b>Program Total</b>	<b>0.144</b>	<b>34%</b>	<b>0.049</b>	<b>0.096</b>	<b>157%</b>	<b>0.150</b>

**Table 1-3: DEC Program Level Savings**

Measurement	Population	Reported	Realization Rate	Gross Verified
Energy (kWh)	44,114	18,797,312	134%	25,232,766
Summer Demand (kW)		6,342	34%	2,169
Winter Demand (kW)		4,217	157%	6,624

The portion of gross verified savings by measure type are presented in Figure 1-1. Per unit energy and demand savings by measure and the program net to gross ratio, with free ridership and spillover components, are presented in Table 1-4.

**Figure 1-1: DEC Portion of Program Verified Savings by Measure**

**Table 1-4: DEC Verified Impacts by Measure**

Measure	Energy Savings per unit (kWh)	Summer Demand Savings per unit (kW)	Winter Demand Savings per unit (kW)	Free Ridership	Spillover	Net to Gross Ratio
Low-flow Showerhead	324.9	0.0276	0.0989	9.3%	12.6%	103.3%
Low-flow Kitchen Aerator	50.2	0.0035	0.0040			
Low-flow Bathroom Aerator	15.5	0.0015	0.0017			
Insulating Pipe Tape*	7.0	0.0008	0.0008			

\* Savings for pipe tape is a per linear foot measurement

Table 1-5, Table 1-6, and Table 1-7 present the summarized findings of the impact evaluation for the DEP jurisdiction.

**Table 1-5: DEP Energy Savings per Kit**

Kit Size	Population	Reported Energy (kWh)	Energy Realization Rate	Gross Verified Energy (kWh)
Small	14,479	428	118%	506
Medium	11,633	738	101%	748
<b>Program Total</b>	<b>26,112</b>	<b>566</b>	<b>108%</b>	<b>614</b>

**Table 1-6: DEP Demand Savings per Kit**

Kit Size	Summer Demand (kW)			Winter Demand (kW)		
	Reported	Realization Rate	Gross Verified	Reported	Realization Rate	Gross Verified
Small	0.143	30%	0.044	0.107	119%	0.127
Medium	0.242	26%	0.064	0.191	105%	0.200
<b>Program Total</b>	<b>0.187</b>	<b>28%</b>	<b>0.053</b>	<b>0.144</b>	<b>111%</b>	<b>0.160</b>

**Table 1-7: DEP Program Level Savings**

Measurement	Population	Reported	Realization Rate	Gross Verified
Energy (kWh)	26,112	14,785,941	108%	16,025,692
Summer Demand (kW)		4,886	28%	1,376
Winter Demand (kW)		3,761	111%	4,166

The portion of gross verified savings by measure type are presented in Figure 1-2. Per unit energy and demand savings by measure and program net to gross ratio, with free ridership and spillover components, are presented in Table 1-8.

**Figure 1-2: DEP Portion of Program Verified Savings by Measure**

**Table 1-8: DEP Verified Impacts by Measure**

Measure	Energy Savings per unit (kWh)	Summer Demand Savings per unit (kW)	Winter Demand Savings per unit (kW)	Free Ridership	Spillover	Net to Gross Ratio
Low-flow Showerhead	333.1	0.0283	0.1014	8.0%	17.5%	109.5%
Low-flow Kitchen Aerator	57.3	0.0040	0.0045			
Low-flow Bathroom Aerator	20.9	0.0020	0.0023			
Insulating Pipe Tape*	6.9	0.0008	0.0008			

\* Savings for pipe tape is a per linear foot measurement

### 1.2.2 Process Evaluation

The process evaluation assessed opportunities for improving the program's design and delivery in the DEC and DEP service territories. It specifically documented participant experiences by exploring participating household feedback and the extent to which the kits effectively motivate households to save energy.

The evaluation team conducted telephone and web surveys with households that received a kit (DEC n=320; DEP n=343). The team also conducted in-depth interviews with the Duke Program Team and kit provider staff.

#### **Program Successes**

The 2018-2019 DEP/DEC SEWKP evaluation found successes in the following areas:

**Most participants are satisfied with kit items and report high satisfaction with the overall program.** Less than 10% of participants in each jurisdiction reported dissatisfaction with any specific measure they installed, and the vast majority reported they were highly satisfied with the overall program (83% DEC; 86% DEP).

**Kit instructions are perceived as highly helpful among SEWKP participants.** Eighty-five percent of participants in each jurisdiction said they read the instructional insert from their kit that offers detailed instructions on self-installing the measures, and most of them said the instructions were very helpful (81% DEC; 84% DEP). These paper instructions are likely sufficient for most participants, as most reported high satisfaction and very few took advantage of the toll-free hotline.

**The updated propensity model scoring used to select households is effective in identifying homes with electric water heaters.** Customers with electric water heaters are able to realize electric savings from water-saving equipment. Thanks at least in part to propensity model updates, the percentage of participants with electric water heaters increased in both jurisdictions from less than 80% in 2017 to nearly 90% in 2019.

**The program influenced households to install kit measures.** Most participating households installed at least one measure from the kit (79% DEC; 83% DEP), and the vast majority of measures, once installed, remained installed (92% DEC; 91% DEP). Participants were highly influenced by the program to install kit measures, as demonstrated by low free ridership rates. In addition, more than one-third of participants in each jurisdiction reported purchasing and installing additional energy efficiency measures since receiving their kit (37% DEC; 35% DEP).

### ***Program Challenges***

The 2018-2019 DEC and DEP SEWKP evaluations found some challenges in the following areas:

**Insulating pipe tape is the least popular measure.** Pipe tape was the least installed measure type, with just over one-third of participants (36%) reportedly installing it in each jurisdiction.

**Low water pressure is a significant contributor to dissatisfaction and uninstalls.** Complaints of excessively low water pressure were the primary drivers of dissatisfaction and uninstallation among a relatively small number of participants who were dissatisfied with or uninstalled any items.

**Increased penetration and saturation of measures included in the kits could contribute to lower installation rates in the future.** Among participants who had yet to install at least one measure and had no immediate plans to do so, more than 20% in each jurisdiction indicated they already had at least one of the efficient measures installed.

## 1.3 Evaluation Conclusions and Recommendations

The evaluation findings led to the following conclusions and recommendations for the program.

**Conclusion 1: The program model is highly successful: it leverages low-cost measures to foster energy savings that would not have happened otherwise.** Duke Energy's easy process for requesting and receiving a kit with free energy and water-saving items motivated thousands of customers to request and install energy saving measures in their home during the evaluation period. Most participants installed at least one measure from the kit, relatively few measures get uninstalled, and many participants reported installing additional energy saving items since receiving the kit. The majority of participants said they would not have installed any of the items on their own, as represented by low free ridership rates, and the program is reaching a diverse range of customers in terms of household characteristics and demographics.

**Recommendation:** Continue using SEWKP to encourage Duke Energy customers to save energy and water.

**Conclusion 2: The water saving measures' low flow water pressure results in some minor dissatisfaction and uninstallation issues.** Complaints of excessively low water pressure were the primary drivers of water-saving measure dissatisfaction and uninstallation. However, only a minority of participants were dissatisfied with or uninstalled any items.

**Recommendation:** Monitor how showerhead upgrades affect satisfaction and uninstallation rates going forward.

**Conclusion 3: Recent program improvements have been largely successful.** Updates to the propensity model contributed to an increase in the percentage of participants that have electric water heaters from less than 80% in 2017 to nearly 90% in 2019 (from 70% to 88% for the DEC program and from 79% to 89% for the DEP program). The new instructional materials provided with the kits also appear to denote a significant improvement from the prior instructions. Recent participants rated the instructions as considerably more helpful than participants in the last evaluated program year: the percentage of customers who rated instructions as "very helpful" increased since 2017 (from 70% to 81% among DEC participants and 80% to 84% among DEP participants).

**Conclusion 4: Increased penetration and saturation of measures included in the kits may limit installation rates going forward.** Among participants who had yet to install measures and had no immediate plans to do so, more than 20% indicated they already had at least one of the efficient measures installed. For insulating pipe tape, more than 30% of those without plans to install the measure reported they already had some installed (34% for DEC and 32% for DEP). These rates were nearly as high for showerheads, for which 32% of DEC respondents and 25% of DEP respondents with no plans to install indicated that they already an efficient one installed.

**Recommendation:** Monitor installation rates going forward and consider excluding measures that show high rates of prior ownership.

## 2 Introduction and Program Description

### 2.1 Program Description

#### 2.1.1 Overview

The Save Energy and Water Kit Program (SEWKP) is a Duke Energy program that provides free energy and water efficiency kits to pre-selected households in Duke Energy Carolinas (DEC) and Duke Energy Progress (DEP) territories. The kits include low-flow aerators for kitchen and bathroom sink faucets, low-flow showerheads, and insulating water heater pipe tape.

#### 2.1.2 Energy Efficiency Kit Measures

Table 2-1 lists the kit's contents included in the evaluation scope. There are two kit sizes, which dictate the number of showerheads and bathroom aerators the participant receives. In addition to the measures below, the kit includes plumbing tape, a rubber gasket opener to remove old aerators and showerheads, and an instructional insert that has detailed installation instructions. Duke Energy has additional installation instruction information available on their website.

**Table 2-1: Kit Measures and Quantity**

Measures	Small Kit	Medium Kit
Low-flow Showerhead (1.5 gpm)	1	2
Low-flow Bathroom Faucet Aerator (1.0 gpm)	2	2
Low-flow Kitchen Faucet Aerator (1.0 gpm)	1	1
Insulating Pipe Tape (up to 10' of coverage)	1	1

### 2.2 Program Implementation

#### 2.2.1 Participant Identification and Recruitment

Every month Duke Energy's internal analytics department identifies households to recruit into the program. They look through customer accounts for single family electric-only accounts that have not participated in SEWKP or any other programs with similar measures (specifically, the Energy Efficiency Education in Schools and Home Energy House Call programs). Pre-selected households are then assigned either a small or medium kit based on household square footage. Next, Duke Energy approaches these customers through either emails, if the pre-selected customer has an email address on file, or business reply cards (BRC). Simultaneously, Duke Energy sends the implementer – Energy Federation, Inc. (EFI) – a list of pre-selected accounts that received an offer to participate in the SEWKP that month. Email messages provide a link for the customer to join the program and households that receive the BRC simply detach the reply

form and put it back in the mail (postage is pre-paid). Alternatively, customers may also call a toll free number, provided on the email or BRC, to confirm eligibility and request their free kit. EFI then ships the appropriate kit (small or medium) to registered households.

### 2.2.2 Participation

For the defined evaluation period of September 1<sup>st</sup>, 2018 through August 31<sup>st</sup>, 2019, the program recorded a total of 49,353 kit recipients in DEC and 10.6% of our sample stated they did not remember receiving the kit. The program population was reduced by 10.6% to 44,114 for the evaluated estimate of kit participants. For DEP the program reported 27,939 kit recipients with 6.5% of our sample stated they did not remember receiving the kit; leading to an evaluated estimate of 26,112 DEP participants.

## 2.3 Key Research Objectives

Over-arching project goals will follow the definition of impact evaluation established in the “Model Energy-Efficiency Program Impact Evaluation Guide – A Resource of the National Action Plan for Energy Efficiency,” November 2007:

*“Evaluation is the process of determining and documenting the results, benefits, and lessons learned from an energy-efficiency program. Evaluation results can be used in planning future programs and determining the value and potential of a portfolio of energy-efficiency programs in an integrated resource planning process. It can also be used in retrospectively determining the performance (and resulting payments, incentives, or penalties) of contractors and administrators responsible for implementing efficiency programs”.*

Evaluation has two key objectives:

- 1) To document and measure the effects of a program and determine whether it met its goals with respect to being a reliable energy resource.
- 2) To help understand why those effects occurred and identify ways to improve the program.

### 2.3.1 Impact

As part of evaluation planning, the evaluation team outlined the following activities to assess the impacts of the DEC-DEP SEWKP:

- Quantify accurate and supportable energy (kWh) and demand (kW) savings for energy efficient measures implemented in participants’ homes;
- Assess the rate of free riders from the participants’ perspective and determine spillover effects;
- Benchmark verified measure-level energy impacts to applicable technical reference manual(s) and other Duke-similar programs in other jurisdictions.

### 2.3.2 Process

The process evaluation assessed opportunities for improving the design and delivery of the program in both DEC and DEP service territories. It specifically documented participant experiences by investigating participant responses to the energy efficiency kits and the extent to which the kits effectively motivate households to save energy and water.

The evaluation team assessed several elements of the program delivery and customer experience, including:

#### **Motivation:**

- What motivated participants to request and install the measures in the kit?
- In what ways, if any, did the program motivate participants to adopt new energy and water saving behaviors?

#### **Program experience and satisfaction:**

- How satisfied are participants with the overall program experience and kit items in terms of ease of use and measure quality?

#### **Challenges and opportunities for improvement:**

- Are there any inefficiencies or challenges with the delivery of the program?
- Are there any measures that have particularly low installation rates? If so, why?
- Are there any measures that have particularly high uninstallation rates? If so, why?

#### **Participant household characteristics:**

- What are demographic characteristics of those who received the kits?

## 2.4 Evaluation Overview

The evaluation team divided its approach into key tasks to meet the goals outlined:

- **Task 1** – Develop and manage evaluation work plan to describe the processes that will be followed to complete the evaluation tasks outlined in this project;
- **Task 2** – Conduct a process review to determine how successfully the programs are being delivered to participants and to identify opportunities for improvement;
- **Task 3** – Verify gross and net energy and peak demand savings resulting from SEWKP through verification activities of a sample of 2018-2019 program participants.

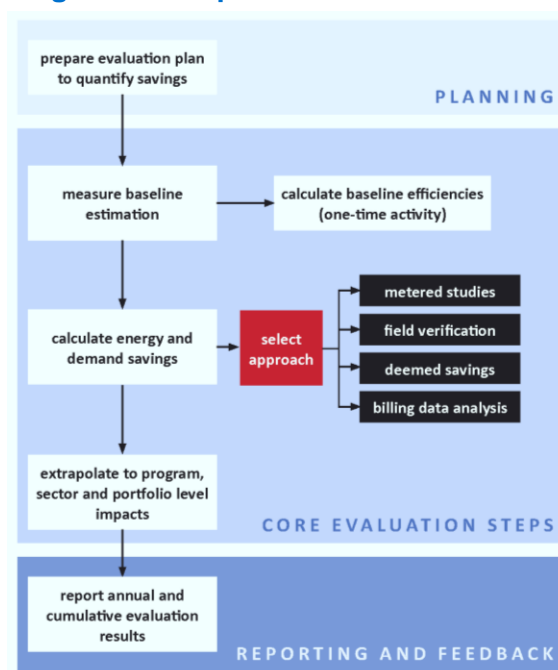

### 2.4.1 Impact Evaluation

The primary determinants of impact evaluation costs are the sample size and the level of rigor employed in collecting the data used in the impact analysis. The accuracy of the study findings is in turn dependent on these parameters. Techniques that we used to conduct our evaluation,

measurement, and verification (EM&V) activities, and to meet the goals for this evaluation, included telephone and web-based surveys with program participants, best practice review, and interviews with implementation and program staff.

Figure 2-1 demonstrates the principal evaluation team steps organized through planning, core evaluation activities, and final reporting.

**Figure 2-1: Impact Evaluation Process**

The evaluation is generally comprised of the following steps, which are described in further detail throughout this report:

- **Participant Surveys:** The file review for all sampled and reviewed program participation concluded with a telephone and/or web-based survey with the participants. Table 2-2 below summarizes the number of surveys completed. The samples were drawn to meet a 90% confidence and 10% precision level based upon the expected and actual significance (or magnitude) of program participation, the level of certainty of savings, and the variety of measures.
- **Calculate Impacts:** Data collected via surveys enabled the evaluation team to calculate gross verified energy and demand savings for each measure.
- **Estimate Net Savings:** Net impacts are a reflection of the degree to which the gross savings are a result of the program efforts and incentives. The evaluation team estimated free-ridership and spillover based on self-report methods through surveys with program participants. The ratio of net verified savings to gross verified savings is the net-to-gross ratio as an adjustment factor to the reported savings.

## 2.4.2 Process Evaluation

Process evaluation examines and documents:

- Program operations
- Stakeholder satisfaction
- Opportunities to improve the efficiency and effectiveness of program delivery

To satisfy the evaluation, measurement, and verification (EM&V) objectives for this research effort, the evaluation team reviewed program documents and conducted telephone and web surveys with participating households who received a kit. The team also held in-depth interviews (IDI) with utility and implementation staff. Table 2-2 provides a summary of the activities the evaluation team conducted as part of the DEC (Table 2-2) and DEP (Table 2-3) SEWKP process and impact evaluations.

**Table 2-2: DEC SEWKP Summary of Evaluation Activities**

Target Group	Population	Sample	Confidence /Precision	Method
<b>Impact Activities</b>				
DEC Participants	49,353	320	90% ± 4.6%	Telephone/Web Survey
<b>Process Activities</b>				
DEC Participants	49,353	320	90% ± 4.6%	Telephone/Web Survey
Duke Energy Program Staff	n/a	1	n/a	Telephone IDI
Implementer Staff: EFI	n/a	1	n/a	Telephone IDI

**Table 2-3: DEP SEWKP Summary of Evaluation Activities**

Target Group	Population	Sample	Confidence /Precision	Method
<b>Impact Activities</b>				
DEP Participants	27,939	343	90% ± 4.5%	Telephone/Web Survey
<b>Process Activities</b>				
DEP Participants	27,939	343	90% ± 4.5 %	Telephone/Web Survey
Duke Energy Program Staff	n/a	1	n/a	Telephone IDI
Implementer Staff: EFI	n/a	1	n/a	Telephone IDI

## 3 Impact Evaluation

### 3.1 Methodology

The evaluation team's impact analysis focused on the energy and demand savings attributable to the SEWKP for the period of September 2018 through August 2019. The evaluation was divided into two research areas: to determine gross savings and net savings (or impacts). Gross impacts are energy and demand savings estimated at a participant's home that are the direct result of the homeowner's installation of a measure included in the program-provided energy saving kit. Net impacts are a reflection of the degree to which the gross savings are a result of the program efforts and funds. The evaluation team verified energy and demand savings attributable to the program by conducting the following impact evaluation activities:

- Review of DEC and DEP participant database.
- Completion of telephone and web-based surveys to verify key inputs into savings calculations.
- Estimation of gross verified savings using primary data collected from participants.
- Comparison of the gross-verified savings to program-evaluated results to determine kit-level realization rates.
- Application of attribution survey data to estimate net-to-gross ratios and net-verified savings at the program level.

### 3.2 Sampling Plan and Achievement

To provide representative results and meet program evaluation goals, a sampling plan was created to guide all evaluation activity. A random sample was created to target 90/10 confidence and precision at the program level assuming a coefficient of variation ( $C_v$ ) equal to 0.5.

#### 3.2.1 Sampling

After reviewing the program database, we identified populations of 49,353 (DEC) and 27,939 (DEP) participants within our defined evaluation period. Based on this population, the evaluation team established sub-sample frames for phone and web-based survey administration. Customers who were flagged as "do not contact" in the participation database were excluded from the sample frame. As illustrated in Table 3-1 below, we completed 320 (DEC) and 343 (DEP) surveys among program participants between October 14<sup>th</sup> and 28<sup>th</sup>, 2019. This sample size resulted in a precision of  $\pm 4.6$  (DEC) and  $\pm 4.5$  (DEP) at a 90% confidence interval.

**Table 3-1: DEC-DEP Impact Sampling**

Jurisdiction	Survey Mode	Sample Frame	Sampled Participants	Achieved Precision at 90% Confidence
Carolinas	Phone	1,499	70	90% ± 4.6%
	Web-based	2,000	250	
	<b>Total</b>	<b>3,499</b>	<b>320</b>	
Progress	Phone	1,591	70	90% ± 4.5%
	Web-based	2,000	273	
	<b>Total</b>	<b>3,591</b>	<b>343</b>	

### 3.3 Description of Analysis

#### 3.3.1 Telephone and web-based surveys

The evaluation team performed telephone and web-based surveys to gather key pieces of information used in the savings calculations. Results of the completed surveys were used to inform our program-wide assumptions as detailed in Table 3-2.

**Table 3-2: Participant Data Collected and Used for Analysis**

Measure	Data Collected	Assumption
Showerhead Bathroom Faucet Aerator Kitchen Faucet Aerator	Units Installed	In-Service Rate
	Units Later Removed	
	Hot Water Fuel Type	% Electric DHW
	Frequency of Showers	Hot Water Consumption
	Duration of Showers	
Insulating Pipe Tape	Pipe Tape Used	In-Service Rate
	Pipe Tape Removed	
	Hot Water Fuel Type	% Electric DHW
	Length of Insulated Pipe	Pipe Length

#### 3.3.2 In-Service Rate

The in-service rate (ISR) represents the ratio of equipment installed and operable to the total pieces of equipment distributed and eligible for installation. For example, if 15 telephone surveys were completed for customers receiving 1 bathroom aerator each, and five customers reported to still have the aerator installed and operable, the ISR for this measure would be five out of 15 or 33%. In some instances equipment was installed, but may have been removed later due to homeowner preferences. In these cases the equipment is no longer operable and therefore contributes negatively to the ISR. In-service rates for each measure from all eligible survey respondents are detailed in Table 3-3.

**Table 3-3: DEC-DEP SEWKP Sample In-Service Rates**

Jurisdiction	Measure	Distributed	Installed	Removed	ISR
Carolinas	Showerhead	436	244	24	50%
	Kitchen Faucet Aerator	320	142	17	39%
	Insulating Pipe Tape*	320	115	1	36%
	Bathroom Faucet Aerator	640	202	10	30%
Progress	Showerhead	481	278	31	51%
	Kitchen Faucet Aerator	343	159	15	42%
	Bathroom Faucet Aerator	686	270	11	38%
	Insulating Pipe Tape*	343	124	4	35%

\*Quantity of pipe tape packages

In-service rates for all measures in the Carolinas jurisdiction (Figure 3-1) are greater than, or in-line with the, verified rates from the previous evaluation.<sup>1</sup>

**Figure 3-1: DEC Equipment In-Service Rates**

For the Progress jurisdiction (Figure 3-2) in-service rates for bathroom faucet aerators increased by 10% driven by a program change that reduced the number of bathroom faucet aerators provided through the medium kit from four to two. This evaluation (along with the previous 2016-2017 evaluation) has shown measure level in-service rates go down as the number of identical kit measures increases. Removing these items with low in-service rates increased the per unit savings attributed to bathroom faucet aerators. All other measure have similar in-service rates to the 2017 evaluation.

<sup>1</sup> Save Energy and Water Kits 2016 Program Year Evaluation Report, November 29<sup>th</sup>, 2017

**Figure 3-2: DEP Equipment In-Service Rates**

### 3.3.3 Kit Measure Savings

The next section of the evaluation report provides a summary of the algorithms used to estimate energy and demand savings for each of the kit items. Input parameters were provided by program participant responses in the surveys. For more technical inputs the evaluation applied deemed values provided by the Mid-Atlantic TRM v9.

Demand savings coincident factors (CF) for the summer and winter seasons were estimated to align with peak demand periods<sup>2</sup> for each jurisdiction using the study on residential domestic hot water use referenced by the Mid-Atlantic TRM<sup>3</sup>. This method takes into account the average hot water use by fixture type (showerhead, faucet aerator) during the peak period along with the probability of the evaluation daily hours of use occurring at the same time.

#### 3.3.3.1 Showerheads

The Save Energy and Water Kit contained multiple low-flow showerheads with the quantity depending on the size of the kit received. Small kit participants received one showerhead; those qualifying for a medium kit received two showerheads. The equations below outline the algorithms utilized to estimate savings accrued by the faucet aerator measures with parameters defined in Table 3-4.

#### Equation 3-1: Showerhead Energy Savings Algorithm

$$\Delta kWh = ISR \times ELEC \times \frac{\Delta GPM \times HOU \times \Delta T \times 8.3 \frac{BTU}{gal \cdot ^\circ F}}{3,412 \frac{BTU}{kWh} \times RE}$$

<sup>2</sup> Both the Carolinas and Progress jurisdictions define their demand peaks as July, 4pm to 5pm (Summer) and January, 7am to 8am (Winter)

<sup>3</sup> Aquacraft, DeOreo and Mayer, *The End Uses of Hot Water in Single Family Homes from Flow Trace Analysis*

$$HOU = \frac{T_{shower} \times N_{persons} \times Showers_{per\ person} \times 365 \frac{days}{year}}{Showers_{per\ home}}$$

### Equation 3-2: Showerhead Demand Savings Algorithm

$$\Delta kW = CF \times \frac{\Delta kWh}{HOU}$$

**Table 3-4: Inputs for Showerhead Savings Calculations**

Input	Units	Showerhead Savings Input		Source
		DEC	DEP	
ISR, showerhead 1	n/a	56%	57%	Participant survey responses
ISR, showerhead 2	n/a	34%	37%	Participant survey responses
ELEC	n/a	88%	89%	Participant survey responses
$\Delta GPM$	gpm	1.0		Baseline, Mid-Atlantic TRM v9 Retrofit, product specification sheet
$T_{shower}$	minutes/shower	9.1	9.6	Participant survey responses
$N_{persons}$	people/home	2.60	2.71	Participant survey responses
$Showers_{per\ person}$	showers/person/day	1.04	1.00	Participant survey responses
$Showers_{per\ home}$	showers/home	1.34	1.42	Participant survey responses
$\Delta T$	°F	44.1°		Mid-Atlantic TRM v9
RE	n/a	98%		Mid-Atlantic TRM v9
CF, summer	n/a	0.0095	0.0095	Mid-Atlantic TRM v9, adjusted
CF, winter	n/a	0.0342	0.0340	Mid-Atlantic TRM v9, adjusted

The number of showerheads provided to each participant is dependent on the size of the kit received; with small kits providing a single showerhead and medium kits providing two. Since the evaluation demonstrated that equipment in-service rates drop as additional items are provided (i.e. a second showerhead) it is important to show the difference in estimated savings between the first and second showerhead provided to a participant. Savings for each showerhead, as shown in Table 3-5, are calculated at the jurisdiction level using all the same measure inputs from Table 3-4 except for the in-service rate. This single change accounts for the full difference in energy and demand savings for the measure. Weighted averages presented here align with previous per unit savings shown in Table 1-4 and Table 1-8 and represent the average savings for each showerhead provided through the program.

**Table 3-5: Showerhead Savings, per unit**

Jurisdiction	Item	Program Population	Verified Savings, per unit		
			Energy (kWh)	Summer Demand (kW)	Winter Demand (kW)
DEC	Showerhead 1	44,114	365	0.031	0.111
	Showerhead 2	17,750	224	0.019	0.068
	Weighted Avg		325	0.028	0.099
DEP	Showerhead 1	26,112	374	0.032	0.114
	Showerhead 2	11,633	242	0.021	0.074
	Weighted Avg		333	0.028	0.101

**3.3.3.2 Faucet Aerators**

The Save Energy and Water Kit contained one kitchen faucet aerator and two bathroom faucet aerators. The equations below outline the algorithms utilized to estimate savings accrued by the faucet aerator measures with parameters defined in Table 3-6.

**Equation 3-3: Faucet Aerator Energy Savings Algorithm**

$$\Delta kWh = ISR \times ELEC \times \frac{(GPM_{base} \times Throttle_{base} - GPM_{low} \times Throttle_{low}) \times HOU \times 8.3 \frac{BTU}{gal \cdot ^\circ F} \times \Delta T}{3,412 \frac{BTU}{kWh} \times RE}$$

$$HOU = T_{faucet} \times N_{persons} \times 365 \frac{days}{year} \times DR$$

**Equation 3-4: Faucet Aerator Demand Savings Algorithm**

$$\Delta kW = CF \times \frac{\Delta kWh}{HOU}$$

Bathroom faucet aerators are also provided to each participant based on the size of the kit received; with small kits providing a single bathroom aerator and medium kits providing two. It's

important to show the difference in estimated savings between the first and second bathroom faucet aerator in a kit so savings for each bathroom aerator (Table 3-5) are calculated at the jurisdiction level using all the same measure inputs from Table 3-4, with in-service rate as the only exception. Weighted averages presented here align with previous per unit savings shown in Table 1-4 and Table 1-8 and represent the average savings for each bathroom faucet provided through the program.

**Table 3-9: Bathroom Faucet Aerator Savings, per unit**

### 3.3.3.3 Insulating Pipe Tape

All participants received a 15 foot roll of insulating pipe tape with their kit. To estimate the impacts resulting from the installation of the pipe tape measure, the evaluation team used the algorithms presented below.

#### Equation 3-5: Insulating Pipe Tape Energy Savings Algorithm

$$\Delta kWh = ISR \times ELEC \times \frac{\left(\frac{1}{R_{ex}} - \frac{1}{R_{new}}\right) \times L \times C \times \Delta T \times 8,760}{\eta_{DHW} \times 3,413}$$

#### Equation 3-6: Insulating Pipe Tape Demand Savings Algorithm

$$\Delta kW = \frac{\Delta kWh}{8,760}$$

DEP	Pipe Tape	6.9	0.0008	0.0008

### 3.4 Billing Regression Analysis

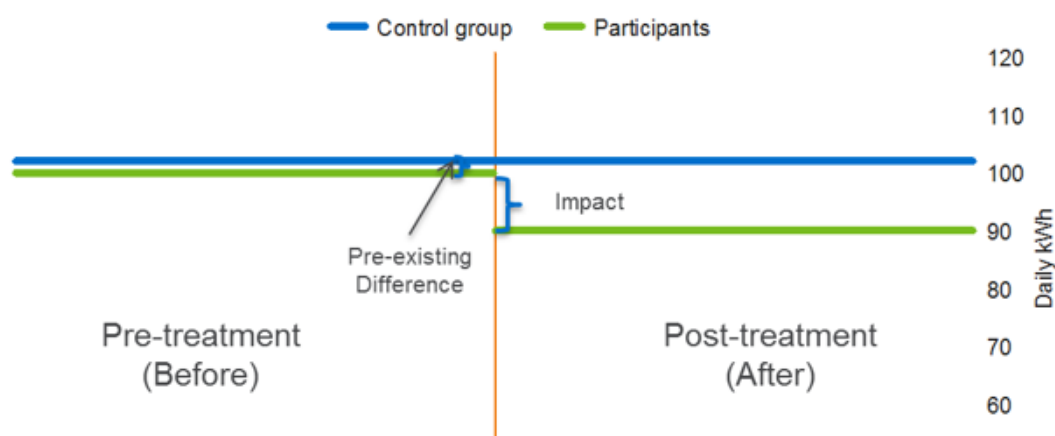

In addition to engineering analysis, the evaluation team attempted to estimate energy savings by analyzing energy use patterns before and after participation in the SEWKP – commonly referred to as billing analysis. After a thorough investigation, which is described in more detail below, we concluded that, absent a randomized control trial, billing analysis was unable to reliably detect energy savings associated with the kit effort. When the percent change in household energy use is small the only reliable way to estimate energy savings using billing analysis is through a randomized control trial with large treatment and control groups and pre- and post-data. Thus, the evaluation team's recommendation is to rely on the engineering analysis and findings as the source of the verified gross and net savings for the program. Below we discuss how we attempted to complete a billing analysis and how we ultimately determined such an analysis was not feasible.

To estimate energy savings with billing data, it is necessary to estimate what energy consumption would have occurred in the absence of SEWKP – the counterfactual or baseline. To infer that the program led to energy savings, it is necessary to systematically eliminate plausible alternative explanations for differences in electricity use patterns.

The basic framework for the analysis is illustrated in Figure 3-3 and relies on both a control group and pre- and post-enrollment billing data. The analysis is implemented in two parts via weather-normalized pre-post and difference-in-differences techniques. The former utilizes observed weather patterns to assess changes in normalized electric consumption during the pre-treatment and post-treatment periods, while the latter compares program participants to a matched comparison group, and removes any pre-existing differences between the treatment and control groups. If the program's kit lead to reductions in consumption, we should observe:

- A change in consumption for households that participated in the SEWKP
- No similar change in consumption for the control group
- The timing of the change should coincide with the receipt of kits

**Figure 3-3: Framework for Billing Analysis with Comparison Groups**

While the SEWKP did not have a randomly assigned control group, the evaluation team did develop a comparison group to use in its analysis. However, there were several key challenges to producing reliable energy savings estimates using billing analysis. The two challenges that could not be addressed despite the use of a comparison group were the small effect size and selection bias. On a percentage basis, the expected energy savings from each kit were less than 2% of annual household energy consumption, and therefore it proved difficult to isolate the impacts of the program from other potential explanations, including random chance. Second, households that signed up for the kit self-selected from their peers. Despite using a comparison group, it could only account for observable characteristics like pre-treatment energy use patterns. As a result, while the participant and comparison group may have had similar energy use patterns in the pre-treatment period, their energy use trajectories absent program participation were not necessarily the same due to differences in the household use patterns.

From a practical standpoint, the use of billing analysis as the primary evaluation approach poses a number of possible challenges.

- Effect size - on a percentage basis, expected impacts from the program are small (0.5% to 1.5%) and thus difficult to distinguish from the inherent “noise” in the billing data;
- Timing of intervention - changes in the mix of participants and/or the timing of individual measure installations can be confused with natural changes in energy use;
- Self-selection - customers who enroll in SEWKP are inherently different than customers who do not:
- They likely have different water use technology, household occupancy, and/or water consumption needs that can yield different responses to program intervention(s);
- In order to be effective, the kits rely on customers to correctly install the individual fixtures themselves

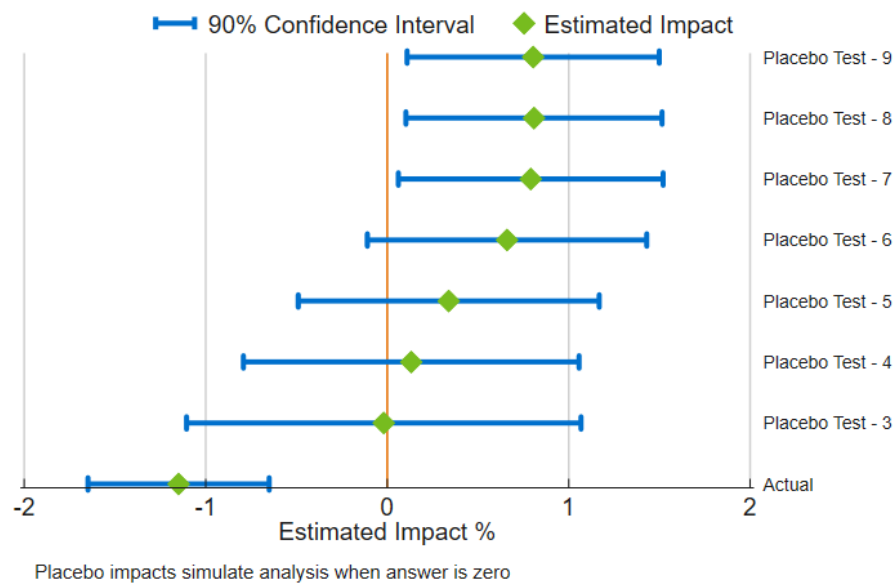

In order to assess if the billing analysis produced reliable results, we implemented a series of placebo pressure tests. The approach consisted of simulating fake enrollments prior to actual participation in the program and assessing if the models detected an effect when using data from the false “pre” period to estimate the counterfactual for the false “post” period. Because enrollment dates were fictitious and actual post periods were excluded, we knew impacts were actually zero and any estimated impacts were due to modeling error. The evaluation team used two years of pre-treatment data for the placebo tests and each participant’s enrollment date was simulated to have occurred between three to nine months prior to actual participation, in increments of one month. The placebo tests were implemented using both a fixed-effects pre-post panel regression model (using only treatment group data) and a difference-in-differences panel regression that made use of the matched comparison group.

Figure 3-4 shows the results from the pre-post placebo tests. Rather than produce zero impacts, the models estimated that the simulated enrollments led to changes in energy use when in fact no intervention had taken place. Moreover, the models incorrectly concluded that the erroneous impacts were statistically significant in several instances – an example of false precision. The pre-post model without a comparison group consistently estimated energy savings when impacts were in fact zero. The difference-in-differences model (Figure 3-5) that made use of the comparison group had less variable results, but it estimated energy increases in the range of roughly 1% to 1.5% when no intervention had taken place. Hence, neither method produced reliable energy savings estimates.

**Figure 3-4: Placebo Pressure Test Results (Pre-Post)**

**Figure 3-5: Placebo Pressure Test Results (Difference-in-Differences)**

When the percent change in household energy use is small, as it is with the SEWKP, the only reliable way to estimate energy savings using billing analysis is through a randomized control trial (RCT) using large treatment and control groups combined with pre- and post-enrollment billing data. The most critical component of a well-designed RCT is to guarantee there are no differences between the treatment and control groups, other than the treatment of the program. This is a critical step to ensure that the analysis is able to accurately estimate the counterfactual

– or what would have happened absent the treatment. If inherent differences exist between the treatment group and control group, any changes in the post-treatment period could be due to these differences, rather than the treatment itself. In order to verify that effects are purely the result of the treatment intervention, the two groups must be ostensibly identical in every way except for the intervention.

Guaranteeing homogeneity between treatment and control groups is not achievable with an opt-in enrollment method. The fact that one group of customers chose to enroll in the program while the other did not implies that some intrinsic difference between them does exist. These differences may include:

- Behavioral preferences or predispositions for energy and water efficiency measures
- Information about the program that is not accessible to non-enrollees
- Higher energy needs and therefore a greater incentive to curb their consumption

Any of these characteristics are likely to contribute to consumption responses or patterns that cannot be attributable to the program intervention. A well-designed RCT includes randomly selected customers in the treatment and control groups, thereby ensuring that the analysis avoids adverse effects of selection bias and/or lurking confounding variables. Due to these variables, RCTs are impracticable for opt-in programs.

After a thorough investigation, we concluded that, absent a RCT, billing analysis was unable to reliably detect energy savings resulting from participation in the program. The evaluation team's conclusion is not that there were no energy savings generated by the SEWKP program, but rather that billing analysis was not the correct tool for estimating the small percentage of energy savings attributable to the program. Thus, the evaluation team's recommendation is to rely on the engineering analysis and findings as the source of our verified gross and net savings for the programs.

### 3.5 Targeted and Achieved Confidence and Precision

We developed the SEWKP evaluation plan with the goal of achieving a target of 10% relative precision at the 90% confidence interval across both jurisdictions at the program level. Due to a high response rate from the web-based surveys, the evaluation team was able to surpass this target and achieve a high level of statistical precision. The final sample yielded a relative precision of  $\pm 4.6\%$  for DEC and  $\pm 4.5\%$  for DEP at the 90% confidence level (Table 3-12).

**Table 3-12: Targeted and Achieved Confidence and Precision**

Jurisdiction	Targeted Confidence/Precision	Achieved Confidence/Precision
DEC	90% ± 10%	90% ± 4.6%
DEP		90% ± 4.5%

## 3.6 Results

Measure-level and kit-level energy savings values for DEC and DEP Save Energy and Water Kit Programs are detailed in the following charts and tables.

### 3.6.1 Duke Energy Carolinas

Participant survey responses in DEC led to positive energy savings adjustments with a program realization rate of 134%. Three of the four measures verified energy savings above the program reported values.

**Figure 3-6: DEC Gross Verified Energy Savings****Table 3-13: DEC Measure-Level Reported and Verified Gross Energy Savings**

Measure	Reported Energy Savings, per unit (kWh)	Realization Rate	Verified Energy Savings, per unit (kWh)
Low-flow Showerhead	231.4	140%	324.9
Low-flow Kitchen Aerator	55.2	91%	50.2
Low-flow Bathroom Aerator	5.7	272%	15.5
Insulating Pipe Tape*	7.0	100%	7.0

\* Savings for pipe tape is a per linear foot measurement

Measure-level and kit-level demand savings are detailed in Table 3-14.

**Table 3-14: DEC Measure-Level Reported and Verified Demand Gross Savings**

Measure	Summer Demand, per unit (kW)			Winter Demand, per unit (kW)		
	Reported	Realization Rate	Gross Verified	Reported	Realization Rate	Gross Verified
Low-flow Showerhead	0.0740	37%	0.0276	0.0556	178%	0.0989
Low-flow Kitchen Aerator	0.0300	12%	0.0035	0.0133	30%	0.0040

Summer Demand (kW)		4,885.7	28%	1,375.6
Winter Demand (kW)		3,760.8	111%	4,166.3

## 4 Net-to-Gross Methodology and Results

The evaluation team used participant survey data to calculate a net-to-gross (NTG) ratio for SEWKP. NTG reflects the effects of free ridership (FR) and spillover (SO) on gross savings. Free ridership refers to the portion of energy savings that participants would have achieved in the absence of the program through their own initiatives and expenditures (U.S. DOE, 2014).<sup>4</sup> Spillover refers to the program-induced adoption of additional energy-saving measures by participants who did not receive financial incentives or technical assistance for the additional measures installed (U.S. DOE, 2014). The evaluation team used the following formula to calculate the NTG ratio:

$$NTG = 1 - FR + SO$$

### 4.1 Free Ridership

Free ridership estimates how much the program influenced participants to install the energy-saving items included in the energy efficiency kit. Free ridership ranges from 0 to 1, with 0 being no free ridership and 1 being total free ridership.

The evaluation team used participant survey data to estimate free ridership. The survey used several questions to identify items that a given participant installed and did not later uninstall: respondents were only asked free ridership questions about items that remained installed by the date of the survey.

The evaluation team's methodology for calculating free ridership consists of two components, free ridership change (FRC) and free ridership influence (FRI), both of which range from 0 to .5 in value.

$$FR = FRC + FRI$$

#### 4.1.1 Free Ridership Change

FRC reflects what participants reported they would have done if the program had not provided the items in the kit. For each respondent, the survey assessed FRC for each measure that the respondent installed and did not later uninstall.

Specifically, the survey asked respondents which, if any, of the currently installed items they would have purchased and installed on their own within the next year if Duke Energy had not provided them. For respondents who installed more than one of a given measure (bathroom

<sup>4</sup> The U.S. Department of Energy (DOE) (2014). *The Uniform Methods Project: Methods for Determining Energy Efficiency Savings for Specific Measures. Chapter 23: Estimating Net Savings: Common Practices*. Retrieved August 29, 2016 from [http://energy.gov/sites/prod/files/2015/02/f19/UMChapter23-estimating-net-savings\\_0.pdf](http://energy.gov/sites/prod/files/2015/02/f19/UMChapter23-estimating-net-savings_0.pdf).

aerators or showerheads) that indicated they would have installed either of the multi-count measures on their own, we asked them a follow up question that determined how many of the number installed through the program that they would have installed on their own.

For each measure, the evaluation team assigned one of the FRC values shown in the Table 4-1, based on the respondents' responses. FRC values range from 0.0 to 0.5.

**Table 4-1: Free Ridership Change Values**

What Respondent Would Have Done Absent the Program*	FRC Value
Would <b>not</b> have purchased and installed the item within the next year	0.00
Would have purchased and installed the item within the next year	$\frac{\text{Count respondent said would install on their own}}{\text{Count respondent installed through program}}$

\*Survey response to: If you had not received the free efficiency items in the kit, would you have purchased and installed any of these same items within the next year?

#### 4.1.2 Free Ridership Influence

FRI assesses how much influence the program had on a participant's decision to install (and keep installed) the items in the kit. The survey asked respondents to rate how much influence four program-related factors had on their respective decisions to install the measures, using a scale from 0 ("not at all influential") to 10 ("extremely influential"). The program-related factors included:

- The fact that the items were free
- The fact that the items were mailed to their home
- Information provided by Duke Energy about how the items would save energy and water
- Other information or advertisements from Duke Energy, including its website

Asking respondents to separately rate the influence of each of the four above items had on the decision to install each measure would have been overly burdensome. Therefore, while the survey assessed FRC for each measure type, it assessed collective FRI for all measures.

FRI is based on the highest-rated item in the FRI battery. The evaluation team assigned the following FRI scores, based on that rating (Table 4-2).

**Table 4-2: Free Ridership Influence Values**

Highest Influence Rating	FRI Value
0	0.50
1	0.45
2	0.40
3	0.35

Highest Influence Rating	FRI Value
4	0.30
5	0.25
6	0.20
7	0.15
8	0.10
9	0.05
10	0.00

### 4.1.3 Total Free Ridership

The evaluation team calculated total free ridership by measure by calculating

- First, measure-specific FR scores for each respondent by summing each respondent's measure-specific FRC score with their FRI score.
- Second, a measure-specific average FR score across all respondents, weighted by the number of units installed by each respondent.

The evaluation team then estimated overall program-level free ridership by calculating a savings-weighted mean of the measure-specific FR scores. Table 4-3 presents the measure-specific and overall FR estimates.

**Table 4-3: Measure-Specific Free Ridership Scores**

End-use	Measure-Specific Free Ridership	
	Carolinas	Progress
Showerhead	9.5%	8.2%
Kitchen Faucet Aerator	9.6%	8.1%
Bathroom Faucet Aerator	6.3%	4.8%
Insulating Pipe Tape	8.3%	7.6%
<b>Overall</b>	<b>9.3%</b>	<b>8.0%</b>

## 4.2 Spillover

Spillover estimates energy savings from additional energy improvements made by participants who are influenced by the program to do so and is used to adjust gross savings. The evaluation team used participant survey data to estimate spillover. The survey asked respondents to indicate what energy-saving measures they had implemented since participating in the program. The evaluation team then asked participants to rate the influence the program had on their decision to purchase these additional energy-saving measures on a scale of 0 to 10, where 0 means "not at all influential" and 10 means "extremely influential."

The evaluation team converted the ratings to a percentage representing the program-attributable percentage of the measure savings, from 0% to 100%. The team then applied the

program-attributable percentage to the savings associated with each reported spillover measure to calculate the participant measure spillover (PMSO) for that measure. We defined the per-unit energy savings for the reported spillover measures based on previous Duke Energy Smart\$aver evaluations, ENERGY STAR® calculators, and algorithms and parameter assumptions listed in the Mid-Atlantic TRM v9.

Since Duke Energy offered program incentives for a variety of energy-saving measures throughout the evaluation period, we compared the list of customers reporting measures as spillover against participation records for other Duke Energy programs that offered the measure. To avoid double-counting savings for measures already claimed by another Duke Energy offering, we excluded savings from measures that appeared in another program's tracking data from our estimation of spillover savings.

Participant measure spillover is calculated as follows:

$$PMSO = Deemed\ Measure\ Savings * Program\ Attributable\ Percentage$$

The evaluation team summed all PMSO savings values for each jurisdiction (Table 4-4 and Table 4-5).

**Table 4-4: DEC Sample PMSO, by Measure by Category**

Measure Category	Total kWh for Category	Percent Share of kWh
LEDs	5,532	24%
Duct Sealing	4,553	20%
Appliance	3,850	17%
HVAC	3,632	16%
Insulation	2,108	9%
Windows	1,695	7%
Water Heater	1,616	7%
CFLs	167	1%
<b>Total</b>	<b>23,153</b>	<b>100%</b>

**Table 4-5: DEP Sample PMSO, by Measure by Category**

Measure Category	Total kWh for Category	Percent Share of kWh
LEDs	19,868	51%
ENERGY STAR Home	5,157	13%
HVAC	4,678	12%
Appliance	3,293	8%
Duct Sealing	1,680	4%
Water Heater	1,385	4%
CFLs	980	3%
Windows	945	2%
Insulation	754	2%
<b>Total</b>	<b>38,740</b>	<b>100%</b>

The evaluation team then calculated gross program savings associated with sampled participants by summing the products of each measure's average per household savings and the total sample size (Table 4-6 and Table 4-7).

**Table 4-6: DEC Sample Gross Program Savings (n=131)**

Measure	Average per Household Savings (kWh)	Verified Sample Savings (kWh)

Kitchen Faucet Aerator	50	16,077
Bathroom Faucet Aerator	31	9,930
Insulating Pipe Tape	35	11,225
<b>Total</b>	<b>575</b>	<b>184,070</b>

**Table 4-7: DEP Sample Gross Program Savings (n=114)**

Measure	Average per Household Savings (kWh)	Verified Sample Savings (kWh)
Showerhead	513	176,023
Kitchen Faucet Aerator	5	19,658
Bathroom Faucet Aerator	42	14,324
Insulating Pipe Tape	33	11,392
<b>Total</b>	<b>645</b>	<b>221,397</b>

The evaluation team then divided the summed jurisdictional PMSO values by the sample's gross program savings to calculate an estimated spillover percentage for the program:

$$Program\ SO = \frac{\sum PMSO}{\sum Sample\ Gross\ Program\ Savings}$$

$$DEC\ SO = \frac{23,153}{184,070} = 12.6\%$$

$$DEP\ SO = \frac{38,740}{221,397} = 17.5\%$$

These calculations produced a spillover estimate of 12.6% for the DEC program and 17.5% for the DEP program. Lower spillover in the Carolinas territory is partially due to Duke Energy's Free LED Program that allows many participants to install new LED lamps in their home at no cost. Since these free LEDs are provided by Duke Energy they are excluded from any spillover estimates.

### 4.3 Net-to-Gross

Inserting the FR and SO estimates into the NTG formula ( $NTG = 1 - FR + SO$ ) produces an NTG value of 103.3% for the DEC program and 109.5% for the DEP program (Table 4-8). The evaluation team applied this NTG ratio to program-wide verified gross savings to calculate SEWKP kit net savings for the jurisdiction (Table 4-9 and Table 4-10).

**Table 4-8: Net-to-Gross Results**

Jurisdiction	Free Ridership	Spillover	NTG
Carolinas	9.3%	12.6%	<b>103.3%</b>
Progress	8.0%	17.5%	<b>109.5%</b>

**Table 4-9: DEC Program Level Savings**

Measurement	Population	Gross Verified	Net-to-Gross Ratio	Net Verified
Energy (kWh)	44,114	25,232,766	103.3%	26,066,590
Summer Demand (kW)		2,169		2,241
Winter Demand (kW)		6,624		6,843

**Table 4-10: DEP Program Level Savings**

Measurement	Population	Gross Verified	Net-to-Gross Ratio	Net Verified
Energy (kWh)	26,112	16,025,692	109.5%	17,557,372
Summer Demand (kW)		1,376		1,507
Winter Demand (kW)		4,166		4,565

## 5 Process Evaluation

### 5.1 Summary of Data Collection Activities

The process evaluation is based on interviews and surveys with program staff, implementer staff, and households who received a kit during the program evaluation year (Table 5-1).

**Table 5-1: Summary of Process Evaluation Data Collection Activities**

Target Group	Method	Sample Size	Population	Confidence / Precision
Duke Energy program staff	Phone in-depth interview	1	n/a	n/a
Implementation staff: EFI	Phone in-depth interview	1	n/a	n/a
DEC participants	Mixed mode (web/phone) survey	320	27,939	90% $\pm$ 4.6%
DEP participants	Mixed mode (web/phone) survey	343	49,353	90% $\pm$ 4.5%

### 5.2 DEC Process Evaluation Findings

#### *Installation Rates*

Most kit recipients (79%) installed at least one measure, installing an average of two measures from the kit. A majority of kit recipients (63%) initially installed at least one of the showerheads, and slightly less than half initially installed at least one of the bathroom faucet aerators (46%) or kitchen faucet aerators (44%) with a smaller proportion reporting installing pipe tape (36%). Of the respondents who received a medium-sized kit, 36% installed both showerheads.<sup>5</sup>

Regardless of kit size received, participants installed an average of one bathroom aerator and one showerhead.

Of the respondents who installed at least one item from the kit, 15% said they later uninstalled at least one of the measures, but no participants uninstalled everything they had installed. In total, 8% of all installed measure types were later uninstalled. Showerheads and kitchen faucet aerators had the highest uninstallation rates, with 12% of respondents who initially installed each later uninstalling them. In most cases, respondents said they uninstalled these water saving measures because they did not like how they worked, later elaborating that the water pressure provided was insufficient to their preferences.

Fifteen percent of respondents reported installing all measure types. Of the respondents who did not install all measure types, 74% said they plan to install at least one of the items they had not yet installed. Respondents who indicated they don't plan to install one or more of the measures typically said they would not install the remaining items because they had not "gotten around to it" (27%), they already had the item (24%), or their current one is still working (17%).

<sup>5</sup> 66% of medium kit recipients installed at least one showerhead, 55% of whom installed both that came with the kit.

### Measure Satisfaction

Nearly all kit recipients reported moderate to high satisfaction with the items they installed from their kit (Figure 5-1). To best gauge the experience with the measures, we asked respondents to rate their satisfaction with all measures they installed, including those they later uninstalled. Respondents were most satisfied with the pipe tape and were least satisfied with the kitchen faucet aerator. Open-ended comments revealed that those customers who were dissatisfied with water-saving measures most often pointed to low water pressure as the reason for dissatisfaction.

**Figure 5-1: DEC Participant Satisfaction with Installed Measures\***

\* Respondents rated their satisfaction with the measures on a scale ranging from 0 ("very dissatisfied") to 10 ("very satisfied"). Dissatisfied indicates 0-4 ratings, moderately satisfied indicates 5-7 ratings, and highly satisfied indicates 8-10 ratings.

### Kit Instructional Materials

In addition to energy-saving measures, the Save Energy and Water Kit includes a detailed instructional booklet that provides information on how to install the provided measures. The vast majority of respondents (85%) said they read the booklet, and most of them (81%) found it highly helpful. Duke Energy also offers a customer care hotline that participants can call for additional assistance, but just 1% of respondents took advantage of the service.

### Additional Energy Saving Actions

More than one-third of participants (37%) reported purchasing and installing additional energy efficiency measures since receiving their kit (Table 5-2). Participants most commonly reported purchasing LEDs (24%), efficient appliances (16%), or air sealing (14%), and 83% of those who installed additional energy-saving measures said the program at least partially influenced their decision.

**Table 5-2: Additional Energy Saving Measures Purchased by DEC Participants**

	Percent of Respondents Reporting Purchases After Receiving the Kit	Percent Reporting at Least Some DEC Program Influence on Purchase
At least one measure	37%	31%
LEDs	24%	21%
Efficient appliances	16%	13%
Air sealing	14%	13%
Insulation	8%	7%
CFLs	6%	6%
Efficient heating or cooling equipment	6%	5%
Efficient water heater	6%	4%
Duct sealing	4%	4%
Efficient windows	4%	3%
Other	5%	3%

\*Multiple Responses Allowed; n=320

## 5.3 DEP Process Evaluation Findings

### *Installation Rates*

The majority (83%) of kit recipients installed at least one measure, installing an average of two measures from the kit. Most kit recipients initially installed at least one of the showerheads (65%), and slightly more than half initially installed at least one of the bathroom faucet aerators (53%). Slightly less than half installed kitchen faucet aerators (46%), and a smaller proportion reporting installing pipe tape (36%). Of the respondents who received a medium-sized kit, 39% installed both showerheads.<sup>6</sup> Regardless of kit size received, participants installed an average of one bathroom aerator and one showerhead.

Of the respondents who installed at least one item from the kit, 15% said they later uninstalled at least one of the measures, just one of whom uninstalled everything they had installed. In total, 9% of all installed measure types were later uninstalled. Showerheads and kitchen faucet aerators had the highest uninstallation rates, with 13% of those who installed showerheads and 9% of those who installed kitchen aerators later uninstalling them. In most cases, respondents said they uninstalled these water saving measures because they did not like how they worked, later elaborating that the water pressure provided was insufficient to their preferences.

About one-tenth (13%) of respondents reported installing all measure types. Of the respondents who did not install all measure types, 78% said they plan to install at least one of the items they had not yet installed. Respondents who indicated they don't plan to install one or more of the

<sup>6</sup> 70% of medium kit recipients installed at least one showerhead, 56% of which installed both that came with the kit.

measures typically said they would not install the remaining items because they had not “gotten around to it” (24%), already had the item (22%), or their current one is still working (21%).

### **Measure Satisfaction**

Nearly all kit recipients reported moderate to high satisfaction with the items they installed from their kit (Figure 5-2). To best gauge the experience with the measures, we asked respondents to rate their satisfaction with all measures they installed, including those they later uninstalled. Respondents reported similar levels of satisfaction with all four measures. Open-ended comments revealed that the few customers who were dissatisfied with water-saving measures mostly pointed to low water pressure as the source of dissatisfaction.

**Figure 5-2: DEP Participant Satisfaction with Installed Measures\***

\* Respondents rated their satisfaction with the measures on a 0 (“very dissatisfied”) to 10 (“very satisfied”) scale. Dissatisfied indicates 0-4 ratings, moderately satisfied indicates 5-7 ratings, and highly satisfied indicates 8-10 ratings.

### **Instructional Materials in the Kit**

In addition to energy-saving measures, the Save Energy and Water Kit includes a detailed instructional booklet that provides information on how to install the provided measures. The vast majority of respondents (85%) said they read the booklet, and most of them (84%) reported they found it highly helpful. Duke Energy also offers a customer care hotline that participants can call for additional assistance, but just 1% of respondents took advantage of the service.

### **Additional Energy Saving Actions**

Over one-third of participants (35%) reported purchasing and installing additional energy efficiency measures since receiving their kit (Table 5-3). Participants most commonly reported purchasing LEDs (25%), efficient appliances (13%), or air sealing (12%), and 78% of those who installed additional energy-saving measures said the program at least partially influenced their decision.

**Table 5-3: Additional Energy Saving Measures Purchased by DEP Participants\***

	Count of Respondents Reporting Purchases After Receiving the Kit	Count Reporting at Least Some DEP Program Influence on Purchase
At least one measure	35%	27%
LEDs	25%	20%
Efficient appliances	13%	10%
Air sealing	12%	10%
Insulation	7%	5%
Efficient heating or cooling equipment	7%	4%
Energy efficient water heater	4%	3%
Efficient windows	4%	2%
CFLs	3%	3%
Duct sealing or insulation	3%	2%
Moved into ENERGY STAR home	1%	1%
Other	5%	4%

\*Multiple Responses Allowed; n=343

## 6 Conclusions and Recommendations

The evaluation findings led to the following conclusions and recommendations for the program.

**Conclusion 1: The program model is highly successful: it leverages low-cost measures to foster energy savings that would not have happened otherwise.** Duke Energy's easy process for requesting and receiving a kit with free energy and water-saving items motivated thousands of customers to request and install energy saving measures in their home during the evaluation period. Most participants installed at least one measure from the kit, relatively few measures get uninstalled, and many participants reported installing additional energy saving items since receiving the kit. The majority of participants said they would not have installed any of the items on their own, as represented by low free ridership rates, and the program is reaching a diverse range of customers in terms of household characteristics and demographics.

**Recommendation:** Continue using SEWKP to encourage Duke Energy customers to save energy and water.

**Conclusion 2: The water saving measures' low flow water pressure results in some minor dissatisfaction and uninstallation issues.** Complaints of excessively low water pressure were the primary drivers of water-saving measure dissatisfaction and uninstallation. However, only a minority of participants were dissatisfied with or uninstalled any items.

**Recommendation:** Monitor how showerhead upgrades affect satisfaction and uninstallation rates going forward.

**Conclusion 3: Recent program improvements have been largely successful.** Updates to the propensity model contributed to an increase in the percentage of participants that have electric water heaters from less than 80% in 2017 to nearly 90% in 2019 (from 70% to 88% for the DEC program and from 79% to 89% for the DEP program). The new instructional materials provided with the kits also appear to denote a significant improvement from the prior instructions. Recent participants rated the instructions as considerably more helpful than participants in the last evaluated program year: the percentage of customers who rated instructions as "very helpful" increased since 2017 (from 70% to 81% among DEC participants and 80% to 84% among DEP participants).

**Conclusion 4: Increased penetration and saturation of measures included in the kits may limit installation rates going forward.** Among participants who had yet to install measures and had no immediate plans to do so, more than 20% indicated they already had at least one of the efficient measures installed. For pipe tape, more than 30% of those without plans to install the measure reported they already had some installed (34% for DEC and 32% for DEP). These rates were nearly as high for showerheads, for which 32% of DEC respondents and 25% of DEP respondents with no plans to install indicated that they already an efficient one installed.

**Recommendation:** Monitor installation rates going forward and consider excluding measures that show high rates of prior ownership.

## Appendix A Summary Form

### Save Energy and Water Kit Program Completed EMV Fact Sheet

#### Description of program

The Duke Energy Save Energy and Water Kit Program (SEWKP) is an energy efficiency program that offers energy-efficient water fixtures and water pipe insulation to residential customers. The program is designed to reach customers who have not adopted energy-efficient water devices. The kits are provided to residents through a Direct Mail Campaign, allowing eligible customers to request to have the items shipped directly to their homes, free of charge.

Date	March 11, 2019
Region(s)	Carolinas and Progress
Evaluation Period	September 1st, 2018 – August 31 <sup>st</sup> , 2019
Annual Gross MWh Savings	DEC: 25,233 DEP: 16,026
Per Kit Gross kWh Savings	DEC: 426 DEP: 566
Annual Gross MW Savings	DEC: 2.17 (summer), 6.62 (winter) DEP: 1.38 (summer), 4.17 (winter)
Net-to-Gross Ratio	DEC: 103.3% DEP: 109.6%
Process Evaluation	Yes
Previous Evaluation(s)	2016

#### Evaluation Methodology

##### Impact Evaluation Activities

- Telephone/web surveys (DEC n=320, DEP n=343) and analysis of 4 unique measures

##### Impact Evaluation Findings

- Realization rates:
  - DEC: 134% (energy); 40% (summer demand); 166% for (winter demand)
  - DEP: 108% (energy); 28% (summer demand); 111% for (winter demand)
- Net-to-gross ratio: 103.3% (DEC), 109.6% (DEP)

##### Process Evaluation Activities

- Telephone/web surveys (DEC n=320, DEP n=343)
- 1 interview with program staff
- 1 interview with implementation staff

##### Process Evaluation Findings

- The SEWKP influences participants to install kit measures and adopt new behaviors.
- Participants are generally satisfied with kit items and report high satisfaction with overall program.
- Kit size assignment algorithm is fairly accurate.
- Low water pressure is the leading contributor to dissatisfaction with water-saving items among a relatively small number of participants.
- The toll-free customer care hotline is used by a very small number of SEWKP participants

## Appendix B Measure Impact Results

**Table B-1: DEC Per Unit Verified Impacts by Measure – Key Measure Parameters**

Measure Category	Gross Energy Savings (kWh)	Gross Summer Demand (kW)	Gross Winter Demand (kW)	Realization Rate (Energy)	Free Ridership	Spillover	Net to Gross Ratio	M&V Factor (Energy) (RR x NTG)	Measure Life
Low-flow Showerhead (1.5 gpm)	324.9	0.0276	0.0989	140.4%	9.5%	12.6%	103.3%	145.0%	10
Kitchen Faucet Aerator (1.0 gpm)	50.2	0.0035	0.0040	91.0%	9.6%			94.0%	10
Bathroom Faucet Aerator (1.0 gpm)	15.5	0.0015	0.0017	272.2%	6.3%			281.2%	10
Insulating Pipe Tape*	7.0	0.0008	0.0008	100.2%	8.3%			103.5%	15

\* Per linear foot

**Table B-2: DEP Per Unit Verified Impacts by Measure – Key Measure Parameters**

Measure Category	Gross Energy Savings (kWh)	Gross Summer Demand (kW)	Gross Winter Demand (kW)	Realization Rate (Energy)	Free Ridership	Spillover	Net to Gross Ratio	M&V Factor (Energy) (RR x NTG)	Measure Life
Low-flow Showerhead (1.5 gpm)	333.1	0.0283	0.1014	107.4%	8.2%	17.5%	109.5%	117.7%	10
Kitchen Faucet Aerator (1.0 gpm)	57.3	0.0040	0.0045	92.1%	8.1%			100.9%	10
Bathroom Faucet Aerator (1.0 gpm)	20.9	0.0020	0.0023	353.9%	4.8%			387.7%	10
Insulating Pipe Tape*	6.9	0.0008	0.0008	75.5%	7.6%			82.7%	15

## Appendix D Instruments

### D.1 Program Staff In-Depth Interview Guide

#### Introduction

Today, we'll be discussing your role in the SEWKP or water kit program. We would like to learn about your experiences in administering this program.

Your comments are confidential. If I ask you about areas you don't know about, please feel free to tell me that and we will move on. Also, if you want to refer me to specific documents to answer any of my questions, that's great – I'm happy to look things up if I know where to get the information.

I would like to record this interview for my note-taking purposes. Do I have your permission?

#### Roles & Responsibilities

- Q1. Please describe your position at Duke Energy and your role in the water kit program.
- Q2. How long have you been in this role?

#### Program Delivery

Next, I'd like to learn more about how this program was delivered since your involvement. If the program implementation is different in 2017, please let me know.

- Q3. How is Duke Energy targeting households to participate in this program? Does this vary by jurisdiction?

[IF NEEDED:]

1. What marketing and outreach activities did Duke Energy conduct in the 2016 program year? [*Interviewer: we know they market the program through direct-mail campaign. Probe to inquire if they market the program in any other way.*]
  2. In 2016, what proportion requested a kit among those targeted by the direct mail campaign? Are you satisfied with this response rate? If not, why not?
  3. In terms of marketing, what is planned for 2017? [*If not mentioned: Do you all plan to have a customer facing website for the program? If yes, when and what would it entail? If not, why not?*]
- Q4. What feedback, if any, did you receive from kit recipients on why they decided to request a kit?

Q5. Please describe the kit distribution process, including the responsibilities of your vendors: Relationship 1 (R1) and EFI.

[IF NEEDED:]

1. Can the kit form be submitted online? If not, is Duke considering this option?
2. Who checks whether customers who submitted the kit form are eligible for the program? What is the eligibility criteria?
3. How do you identify customers who have an electric water heating? *[Interviewer: Prior evaluation states that customers with electric water heating are eligible for this program.]*
4. Who tracks kit processing and distribution?
5. How are kits customized? [IF NEEDED:] Can you describe what is included in the small, medium, and large kit? (Confirm kit contents as seen below)

Kit 1 (small)	bath aerator	2
	kitchen aerator	1
	shower head	1
	pipe tape	5
Kit 2 (medium)	bath aerator	4
	kitchen aerator	1
	shower head	2
	pipe tape	5
Kit 3 (large)	bath aerator	5
	kitchen aerator	1
	shower head	3
	pipe tape	5

6. *[If not mentioned]* Are large kits still offered to customers? (If so, does this vary by jurisdiction?)
7. Prior to January 2016, documentation shows the kitchen aerator to have 1.0 GPM, but according to a Duke staff person, the aerator is now rated at 1.5 GPM. Can you please confirm the current GPM for kitchen aerators, and when that changed over (if at all)?
8. What energy saving educational materials are included in the kit?

Q6. What type of feedback have you received from kit recipients about the measures in the kit? [IF ANY ISSUES REPORTED:] How have you addressed those issues?

### Program Goals

Q7. In 2016 and 2017 program year, what were/are Duke Energy targets in terms of:

1. Number of water kits distributed in Carolinas, Progress, Ohio, Indiana, and Kentucky
2. Number of kits distributed by customer segments – if applicable

3. Cost of distributing the kits [*Probe: Does this vary by jurisdiction?*]
4. Anything else?

Q8. How were those targets set, and by whom?

Q9. Compared to the previous program years, have these targets been the same or have they changed? [*If changed:*] Why have they changed?

Q10. Were/are you on track to meet 2016/2017 targets? [*If not on track, probe why not on track and how far behind are they in meeting their targets.*]

1. Number of water kits distributed in each jurisdiction
2. Number of kits distributed by customer segments – if applicable
3. Cost of distributing the kits
4. Anything else?

Q11. How about savings targets? Are you on track to meet the savings targets in Carolinas, Progress, Ohio, Indiana, and Kentucky? If not, why not?

Q12. Does the program have any process or non-impact goals? (*Probe: low-income, renter, or non-English speaking population targeting, increased kit recipient knowledge of how to save energy, etc.*)

[*IF YES:*]

1. How are these goals established?
2. How are they measured?

### **Communication**

Q13. Can you describe how your vendors communicate about the program with Duke Energy? Who do you communicate with, how often, and what about? Does this vary by jurisdiction?

Q14. How often do you or vendors have to resolve an issue with kits? What types of issues come up?

### **Data Tracking of Kits**

Let's talk about the kits a little bit.

Q15. Were there any changes to the items in the small, medium, or large kit during 2016 and 2017 program year? Any changes for 2018 program year? Are these changes for all jurisdictions?

- Q16. We heard that customers must complete a short survey/form to receive a kit. Would it be possible to receive/see this survey data?
- Q17. From the moment a customer requests a kit, how long does it take to receive a kit? Is this time frame typical in terms of how long it takes to receive a kit? [*IF NOT TYPICAL, PROBE to get more information on this topic.*] Does it vary by jurisdiction?
- Q18. Can you tell us how your vendor reports the number of kits sent out to customers to Duke Energy? Is there information on kit distribution that you need but are not getting? What?

We are almost done. I have a few more questions.

**Tape Up**

- Q19. What would you say are the greatest strengths of this program?
- Q20. What would you say is the biggest challenge in administering this program?
- Q21. How can this program be improved?
- Q22. Is there anything else about the program that we have not discussed that you feel should be mentioned?
- Q23. What would you like to learn from the program evaluation?

Those are all of my questions. Thank you very much for your time.

## D.2 Implementer Staff In-Depth Interview Guide

### Introduction

*[Note: Opinion Dynamics staff will schedule calls ahead of time through email contact.]*

*[If needed:]* We are conducting an evaluation of Duke Energy Save Energy and Water Kit Program (SEWKP). Because your organization is involved with this program, we would like to get your perspective on how the program works to help guide us in our efforts.

I would like to record this interview for my note-taking purposes. Do I have your permission?

### Roles & Responsibilities

- Q1. Can you describe your role in the SEWKP or water kit program?
- Q2. Can you describe your program processes? (From receipt of kit forms to notifying EFI to send kits)
- Q3. We have been told that your organization processes kit submission forms for Duke Energy water kit program. Do you provide any other services to Duke Energy?
  - 1. Do you provide these services in all jurisdictions where this program is offered: Progress, Carolinas, Ohio, Indiana, and Kentucky?

### Program Goals

- Q4. In jurisdictions where you are providing services to Duke Energy, do you know what are Duke Energy targets in terms of:
  - 1. Number of water kits distributed
  - 2. Cost of the kits
  - 3. Education goals
  - 4. Anything else?
- Q5. Do you know if Duke Energy is on track to achieve those targets? If so, how do you know?

### Data Tracking of Kits and Eligibility

- Q6. Based on what we heard, households must complete a short survey/form to receive a kit. Do you track the information that is on the survey form in a database? If so, what exactly do you track?
  - 1. Do you track the same information for each jurisdiction?

2. How do you report this information to Duke Energy?
  3. *[If not addressed:]* Do you maintain a dashboard that tracks number of kits and possibly other information. If so, can you send us a screen shot of that dashboard so we can see what is tracked on that dashboard?
  4. Could you provide us with one of the forms so we can see what participants are filling out?
- Q7. Can you describe to us who is eligible to receive the kit – that is, eligibility criteria? Do eligibility criteria vary by jurisdiction?
- Q8. Can you tell us what proportion of households who sent in a kit survey form were ineligible to receive a kit in 2016 in each jurisdiction? What are the most common reasons as to why customers are ineligible? Do you think the proportion of ineligible applications will increase in 2017? If so, why?
- Q9. From the moment households request a kit, do you know how long it takes to receive a kit? Is this time frame typical in terms of how long it takes to receive a kit? *[IF NOT TYPICAL, PROBE to get more information on this topic.]*
- Q10. What challenges have you encountered with processing of the kit forms? *[Probe about missing information or other errors.] [If challenges:]* What could be done to address these challenges? Any suggestions on how to change the form? Are some of these challenges more prevalent in certain jurisdictions? If so, why?
- Q11. How many forms, on average, do you process per week or annually?
- Q12. *[If not addressed:]* What demographic data do you collect from households that request the kits? Which demographic segments are more likely to request the kits? Does this vary by jurisdiction?

### **Communication**

- Q13. Can you describe how you communicate with Duke Energy about the kit form submissions or anything else? Who do you communicate with, how often, and what about?
- Q14. Have there been any challenges in your interactions with Duke Energy? If so, what were they? How did you address them? Were they resolved? If not, what do you think might resolve them?

### **Tape Up**

I have only a couple of more questions left.

- Q15. What would you say is the biggest challenge in processing kit submission forms and distributing kits? What could be done to improve this process?

Q16. Is there anything else about the program that we have not discussed that you feel should be mentioned?

Those are all of my questions. Thank you very much for your time.

## D.3 Participant Survey

### Introduction/ Screening

[ASK FOR PHONE SURVEY]

Q1. Hi, I'm \_\_\_\_\_, calling on behalf of Duke Energy. We are calling about the Save Energy and Water Kit you got from Duke Energy. This kit included faucet aerators, one or two showerheads, and pipe wrap that can help you save water and energy in your home. Do you recall receiving this kit?

1. Yes
2. No
98. Don't know

[IF NEEDED: Can I speak with someone who may know something about this kit?]

[IF NO KNOWLEDGEABLE CONTACT, THANK AND TERMINATE]

[ASK FOR WEB SURVEY]

Q2. We are conducting surveys about the Save Energy and Water Kit you got from Duke Energy. This kit included faucet aerators, one or two showerheads, and pipe wrap that can help you save water and energy in your home. Do you recall receiving this kit?

1. Yes
2. No [TERMINATE]
3. Don't know [TERMINATE]

### Motivation and Collateral

Q3. [deleted]

Q4. Did you read the included instructions on how to install the items that came in the kit?

1. Yes
2. No
98. Don't remember

[ASK IF Q3=1]

Q5. [ASK IF 4=1] On a scale from 0 to 10, where 0 is not at all helpful and 10 is very helpful, how helpful were the instructions on how to install the items that came in the kit?

0. Not at all helpful
- 1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.
- 8.
- 9.
10. Very helpful
98. Don't know

[ASK IF Q5<7]

Q6. What might have made the instructions more helpful?

[RECORD VERBATIM ANSWER]

- Q7. [deleted]  
Q8. [deleted]  
Q9. [deleted]

### Assessing Measure Installation

[DISPLAY IF KIT\_SIZE=SMALL:] We'd like to ask you about the energy and water saving items included in your kit. The kit contained a showerhead, faucet aerators for the bathroom and kitchen, and pipe wrap.

[DISPLAY IF KIT\_SIZE=MEDIUM:] We'd like to ask you about the energy and water saving items included in your kit. The kit contained two showerheads, faucet aerators for the bathroom and kitchen, and pipe wrap.

Q10. Have you or anyone else installed any of those items in your home, even if they were taken out later? [Interviewer: Throughout interview, remind respondent as needed to report whether someone else in the home installed or uninstalled any items]

1. Yes
2. No [SKIP TO Q23]
98. Don't know [TERMINATE]

[ASK IF Q10=1]

Q11. Which of the items did you install, even if they were taken out later? [MULTIPLE RESPONSE]

[Interviewer: Record each response, then prompt with the list items.]

1. Showerhead
2. Kitchen faucet aerator
3. Bathroom faucet aerator
4. Pipe wrap
98. I don't remember which items were installed [TERMINATE]

[ASK IF Q11=1 AND KIT\_SIZE=MEDIUM]

Q12. Your kit contained two showerheads. Did you install one or both of the showerheads in the kit, even if one or both were taken out later?

1. I installed both
2. I only installed one showerhead
98. Don't know

[ASK IF Q11=3]

Q13. How many of the bathroom faucet aerators from the kit did you install in your home, even if one or more were taken out later?

1. One
2. Two
98. Don't know

[ASK IF Q11=4]

Q14. Did you install all of the pipe insulation that was included with the kit?

1. Yes
2. No
98. Don't know

[ASK IF Q11=4]

Q15. About how many feet of the hot water pipe exiting your water heater did you wrap with the insulation that came in the kit? Please go over to your water heater if you need to check.

1. About three feet or less
2. About four to five feet
3. About six feet or more
98. Don't know

[ASK IF Q11=1,2,3,4]

Q16. Overall, how satisfied are you with the item(s) you installed? [0-10 SCALE FOR EACH; 98=DK]

[DISPLAY IF MODE=PHONE: Please use a 0 to 10 scale, where 0 is very dissatisfied and 10 is very satisfied. How satisfied are you with...]

1. [SHOW IF Q11=1] Showerhead
2. [SHOW IF Q11=2] Kitchen faucet aerator
3. [SHOW IF Q11=3] Bathroom faucet aerator
4. [SHOW IF Q11=4] Pipe wrap

[ASK IF Q16\_1<7 OR Q16\_2<7 OR Q16\_3<7 OR Q16\_4<7]

Q16a. Can you please explain any dissatisfaction you had with the following measures?

[SHOW LIST OF Q16 ITEMS THAT WERE RATED LESS THAN 7]

[OPEN END: RECORD VERBATIM]

Q17. Overall, how satisfied are you with Duke Energy's Save Energy and Water Kit Program? [DISPLAY IF MODE=PHONE: IF NEEDED: Please use that same 0 to 10 scale, where 0 is very dissatisfied and 10 is very satisfied.]

0. Very dissatisfied
- 1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.
- 8.
- 9.
10. Very satisfied
98. Don't know

[ASK IF ANY PART OF Q11=1]

Q18. Have you (or anyone in your home) removed any of the items from the kit that you had previously installed?

1. Yes
2. No
98. Don't know

[ASK IF Q18=1]

Q19. Which of the items did you remove? [MULTIPLE RESPONSE]

Q19\_1. [DISPLAY IF Q11\_1=1] Showerhead[s]

Q19\_2. [DISPLAY IF Q11\_2=1] Kitchen faucet aerator

Q19\_3. [DISPLAY IF Q11\_3=1] Bathroom faucet aerator[s]

Q19\_4. [DISPLAY IF Q11\_4=1] Pipe wrap

Q19\_7. Don't know [EXCLUSIVE ANSWER]

[ASK IF Q19=1 AND Q12=1]

Q20. Did you remove one or both of the showerheads you had previously installed?

1. I uninstalled both
2. I only uninstalled one of the showerheads
98. Don't know

[ASK IF Q19=3 AND Q13=2]

Q21. How many bathroom faucet aerators did you remove?

1. One
2. Two
98. Don't know

[CALCULATE SHOWER:  
IF Q12=1, THEN SHOWER=2;  
IF Q12=2 OR (Q11\_1=1 AND KIT\_SIZE=SMALL), THEN SHOWER=1;  
ELSE SHOWER=0]

[CALCULATE KITCH:  
IF Q11\_2=1, THEN KITCH=1, ELSE KITCH=0]

[CALCULATE BATH:  
IF Q13=2, THEN BATH=2;  
IF Q13=1, THEN BATH=1;  
ELSE BATH=0]

[CALCULATE PIPE:  
IF Q11\_4=1, THEN PIPE=1, ELSE PIPE=0]

[CALCULATE SHOWER1:  
IF SHOWER=1 AND Q19\_1=1, THEN SHOWER1=0;  
IF Q19\_1=1 AND (Q20=1 OR Q20=98), THEN SHOWER1=0;

ELSE PIPE1=PIPE]

CALCULATE CALCTOTAL1:  
[SHOWER1 + BATH1 + KITCHEN1 + PIPE1]

[ASK IF Q19=1,2,3,4—REPEAT FOR EACH SELECTED ITEM]

Q22. Why was the [Q19 SELECTION] removed? [MULTIPLE RESPONSE]

1. It was broken
2. I didn't like how it worked
3. I didn't like how it looked, or
4. Some other reason (please specify): [OPEN END]
98. Don't know

[ASK IF Q10=2 OR Q11\_1=0 OR Q11\_2=0 OR Q11\_3=0 OR Q11\_4=0]

Q23. You said you haven't installed the following items. Which of the following do you plan to install in the next three months? [MULTIPLE RESPONSE]

1. [SHOW IF Q10=2 OR Q11\_1=0] Showerhead
2. [SHOW IF Q10=2 OR Q11\_2=0] Kitchen faucet aerator
3. [SHOW IF Q10=2 OR Q11\_3=0] Bathroom faucet aerator
4. [SHOW IF Q10=2 OR Q11\_4=0] Pipe wrap
96. I'm not planning to install any of these in the next three months [EXCLUSIVE ANSWER]
98. Don't know [EXCLUSIVE ANSWER]

[ASK IF Q23\_1=0 OR ((Q10=2 OR Q11\_1=0) AND Q23\_96=1)]

Q24\_1. What's preventing you from installing the showerhead(s)?

[Interviewer: do not read response options, code responses]

1. Didn't know what that was
2. Tried it, didn't fit
3. Tried it, didn't work as intended (please specify): [OPEN-END]
4. Haven't gotten around to it
5. Current one is still working
6. Takes too much time to install or too busy
7. Too difficult to install it, don't know how to do it
8. Don't have the tools I need
9. Don't have the items any longer (threw away, gave away)
10. [SHOW FOR Q24\_1] Already have efficient showerhead
96. Other (please specify): [OPEN END]
98. Don't know [EXCLUSIVE ANSWER]

[ASK IF Q23\_2=0 OR ((Q10=2 OR Q11\_2=0) AND Q23\_96=1)]

Q24\_2. What's preventing you from installing the showerhead(s)?

[Interviewer: do not read response options, code responses]

1. Didn't know what that was
2. Tried it, didn't fit
3. Tried it, didn't work as intended (please specify): [OPEN END]
4. Haven't gotten around to it
5. Current one is still working
6. Takes too much time to install or too busy
7. Too difficult to install it, don't know how to do it
8. Don't have the tools I need
9. Don't have the items any longer (threw away, gave away)
11. [SHOW FOR Q24\_2] Already have efficient kitchen faucet aerator
96. Other (please specify): [OPEN END]
98. Don't know [EXCLUSIVE ANSWER]

[ASK IF Q23\_3=0 OR ((Q10=2 OR Q11\_3=0) AND Q23\_96=1)]

Q24\_3. What's preventing you from installing the showerhead(s)?

[Interviewer: do not read response options, code responses]

1. Didn't know what that was
2. Tried it, didn't fit
3. Tried it, didn't work as intended (please specify): [OPEN END]
4. Haven't gotten around to it

13. Already have pipe wrap on my hot water pipe
96. Other (please specify): [OPEN END]
98. Don't know [EXCLUSIVE ANSWER]

Q24a. Customers that need additional assistance with their items can call a toll-free customer care hotline. Did you call the customer care hotline to seek assistance in installing any of your items?

1. Yes
2. No
98. Don't know

[ASK IF Q24A=1]

Q24b. Did you call the customer care hotline to seek assistance in installing your kitchen faucet aerator?

1. Yes
2. No
98. Don't know

[ASK IF Q24B=1]

Q24c. Did the customer care hotline offer to send you an adapter for the kitchen faucet aerator?

1. Yes
2. No
98. Don't know

[ASK IF Q24A=1]

Q24d. Did you call the customer care hotline to seek assistance in installing your bathroom faucet aerator?

1. Yes

2. No
98. Don't know

[ASK IF Q24D=1]

Q24e. Did the customer care hotline offer to send you an adapter for the bathroom faucet aerator?

1. Yes
2. No
98. Don't know

Q25. [deleted]

Q26. [deleted]

Q27. [deleted]

Q28. [deleted]

[ASK IF SHOWER1 > 0]

Q29. On average, what is the typical shower length in your household?

1. One minute or less
2. Two to four minutes
3. Five to eight minutes
4. Nine to twelve minutes
5. Thirteen to fifteen minutes
6. Sixteen to twenty minutes
7. Twenty-one to thirty minutes
8. More than thirty minutes
98. Don't know

[ASK IF SHOWER1 > 0]

Q30. [DISPLAY IF SHOWER1=2] Thinking of the efficient showerhead you installed that gets the most usage, on average, how many showers per day are taken in this shower?

[DISPLAY IF SHOWER1=1] Thinking of the efficient showerhead currently installed in your home, on average, how many showers per day are taken in this shower?

1. Less than one
2. One
3. Two
4. Three
5. Four
6. Five
7. Six
8. Seven
9. Eight or more
98. Don't know

[ASK IF SHOWER1=2]

Q31. Thinking of the other efficient showerhead you installed, on average, how many showers per day are taken in this shower?

1. Less than one
2. One
3. Two
4. Three
5. Four
6. Five
7. Six

- 8. Seven
- 9. Eight or more
- 98. Don't know

Q32. [This question was moved to demographics section – but not renumbered for programming purposes]

**NTG**

[SKIP TO Q40 IF CALCTOTAL1=0]

- Q33. If you had not received the free efficiency items in the kit, would you have purchased and installed any of these same items within the next year?
- 1. Yes
  - 2. No
  - 4. Don't know

[ASK IF Q33=1]

- Q34. What items would you have purchased and installed within the next year? [MULTIPLE RESPONSES]
- Q34\_1. [IF SHOWER1 > 0] Energy-efficient showerhead[s]
  - Q34\_2. [IF KITCH1 > 0] Energy-efficient kitchen faucet aerator
  - Q34\_3. [IF BATH1 > 0] Energy-efficient bathroom faucet aerator[s]
  - Q34\_4. [IF PIPEWRAP1 > 0] Pipe wrap
  - Q34\_7. Don't know [EXCLUSIVE ANSWER]

[ASK IF Q34\_1=1 AND SHOWER1=2]

- Q35. If you had not received them in your free kit, how many energy-efficient showerheads would you have purchased and installed within the next year?
- 1. One
  - 2. Two
  - 98. Don't know

[ASK Q36 IF Q34\_3=1 AND BATH1=2]

- Q36. If you had not received them in your free kit, how many energy-efficient bathroom aerators would you have purchased and installed within the next year?
- 1. One
  - 2. Two
  - 98. Don't know

- Q37. Now, thinking about the energy and water savings items that were provided in the kit - using a scale from 0 to 10, where 0 means “not at all influential” and 10 means “extremely influential,” how influential were the following factors on your decision to install the items from the kit? How influential was... [0-10 SCALE FOR EACH; 98=DK]
- 1. The fact that the items were free
  - 2. The fact that the items were mailed to your house
  - 3. Information provided by Duke Energy about how the items would save energy and water
  - 0. Other information or advertisements from Duke Energy, including its website

Q38. [DELETED]

Q39. [DELETED]

- Q40. Since receiving your kit from Duke Energy, have you purchased and installed any other products or made any improvements to your home to help save energy?
1. Yes
  2. No
  98. Don't know

[ASK Q41 IF Q40=1]

- Q41. What products have you purchased and installed to help save energy in your home?

[MULTIPLE RESPONSE]

[INTERVIEWER: Do not read list. After each response, ask, "Anything else?"]

4. Bought energy efficient appliances
5. Moved into an ENERGY STAR home
6. Bought efficient heating or cooling equipment
7. Bought efficient windows
8. Added insulation
9. Sealed air leaks in windows, walls, or doors
10. Sealed or insulated ducts
11. Bought LEDs
12. Bought CFLs
13. Installed an energy efficient water heater
15. Other (please specify): [OPEN END]
96. None – no other actions taken [EXCLUSIVE ANSWER]
98. Don't know [EXCLUSIVE ANSWER]

- Q47. What kinds of appliance(s) did you buy? [MULTIPLE RESPONSE]

[Do not read list]

1. Refrigerator
2. Stand-alone Freezer
3. Dishwasher
4. Clothes washer
5. Clothes dryer
6. Oven
7. Microwave
0. Other (please specify): [OPEN END]
98. Don't know

[ASK IF Q47=1,2,3,4,5,7,0—REPEAT FOR EACH SELECTED ITEM]

Q48. Was the [INSERT Q47 RESPONSE] an ENERGY STAR or high-efficiency model?

1. Yes
2. No
98. Don't know
99. Refused

[ASK IF Q47=5]

Q49. Does the new clothes dryer use natural gas?

1. Yes - it uses natural gas
2. No – does not use natural gas
98. Don't know

[ASK IF Q41=6 AND Q46\_6 > 0]

Q50. What type of heating or cooling equipment did you buy?

[MULTIPLE RESPONSE] [Do not read list]

4. Central air conditioner
5. Window/room air conditioner unit
6. Wall air conditioner unit
7. Air source heat pump
8. Geothermal heat pump
9. Boiler
10. Furnace
11. Wi-fi thermostat
12. Other (please specify): [OPEN END]
98. Don't know

[ASK IF Q50=9 OR 10]

Q51. Does the new [INSERT Q50 RESPONSE] use natural gas?

1. Yes – it uses natural gas
2. No – does not use natural gas
98. Don't know

[ASK IF Q50=4,5,6,7,8,9,10,12—REPEAT FOR EACH SELECTED ITEM]

Q52. Was the [INSERT Q50 RESPONSE] an ENERGY STAR or high-efficiency model?

1. Yes - it is an ENERGY STAR or high-efficiency model
2. No - it is not an ENERGY STAR or high-efficiency model
98. I don't know if it is an ENERGY STAR or high-efficiency model

[ASK IF Q41=7 AND Q46\_7 > 0]

Q53. Do you know how many windows you installed??

1. Yes (please specify how many you installed in the box below)  
[NUMERIC RESPONSE 1 – 100]

2. No

[ASK IF Q41=8 AND Q46\_8 > 0]

Q54. Please let us know what spaces you added insulation to. Also, let us know the proportion of each space for which you added insulation (for example, if you added insulation that covered your entire attic space, you would type in 100%).

1. Attic [NUMERIC RESPONSE 0 – 100]%
2. Walls [NUMERIC RESPONSE 0 - 100]%
3. Below the floor [NUMERIC RESPONSE 0 – 100]%

[ASK IF Q41= 11 AND Q46\_11 > 0]

Q55. Do you know how many LEDs you installed at your property?

1. Yes (please specify how many you installed in the box below)  
[NUMERIC RESPONSE 1 – 100]
2. No

[ASK IF Q41=12 AND Q46\_12 > 0]

Q56. Do you know how many CFLs you installed at your property?

1. Yes (please specify how many you installed in the box below)  
[NUMERIC RESPONSE 1 – 100]
2. No

[ASK IF Q41=13 AND Q46\_13 > 0]

Q57. Does the new water heater use natural gas?

1. Yes – it uses natural gas
2. No – does not use natural gas
98. Don't know

[ASK IF Q41= 13. AND Q46\_13 > 0]

Q58. Which of the following water heaters did you purchase?

1. A traditional water heater with a large tank that holds the hot water
2. A tankless water heater that provides hot water on demand
3. A solar water heater
0. Other (please specify): [OPEN END]
98. Don't know

[ASK IF Q41= 13 AND Q46\_13 > 0]

Q59. Is the new water heater an ENERGY STAR model?

1. Yes
2. No
98. Don't know

## Demographics

Q60. Which of the following types of housing units would you say best describes your home?

1. Single-family detached house
2. Single-family attached home (such as a townhouse or condo)
3. Duplex, triplex or four-plex
4. Apartment or condominium with 5 units or more
5. Manufactured or mobile home
0. Other (please specify): [OPEN END]
98. Don't know

- Q61. How many showers are in your home? Please include both stand-up showers and bathtubs with showerheads.
1. One
  2. Two
  3. Three
  4. Four
  5. Five or more
  98. Don't know
- Q62. How many bathroom sink faucets are in your home? (Keep in mind that some bathrooms may have multiple bathroom sink faucets in them)
1. One
  2. Two

- 9. 150 to under \$200,000
- 10. \$200,000 or more
- 98. Don't know
- 99. Prefer not to say

Q68. What is the highest level of education achieved among those living in your household?

- 1. Less than high school
- 2. Some high school
- 3. High school graduate or equivalent (such as GED)
- 4. Trade or technical school
- 5. Some college (including Associate degree)
- 6. College degree (Bachelor's degree)
- 7. Some graduate school
- 8. Graduate degree, professional degree
- 9. Doctorate
- 98. Don't know
- 99. Prefer not to say

Q69. Finally, what is your year of birth?

[Scroll box with years 1900-2011; 9998=Prefer not to say]

## Appendix E DEC Participant Survey Results

This section reports the results from each question in the DEC participant survey. Since the results reported in this appendix represent the “raw” data (that is, none of the open-ended responses have been coded and none of the scale questions have been binned), some values may be different from those reported in the Process Evaluation Findings chapter (particularly: percentages in tables with “Other” categories and scale response questions). Only respondents who completed the survey are included in the following results.

- Q1. [Read if mode = phone] Hi, I'm \_\_\_\_\_, calling on behalf of Duke Energy. We are calling about the Save Energy and Water Kit you got from Duke Energy.

This kit included faucet aerators, one or two showerheads, and pipe tape that can help you save water and energy in your home. Do you recall receiving this kit?

Response Option	Percent (n=35)
Yes	100%
No	0%
Don't know	0%

- Q2. [Display if mode = web] We are conducting surveys about the Save Energy and Water Kit you got from Duke Energy. This kit included faucet aerators, one or two showerheads, and pipe tape that can help you save water and energy in your home.

Do you recall receiving this kit?

Response Option	Percent (n=285)
Yes	100%
No	0
Don't know	0

- Q3. DELETED

- Q4. Did you read the included instructions on how to install the items that came in the kit?

Response Option	Percent (n=320)
Yes	85%
No	10%
Don't remember	5%

- Q5. [Ask if Q4 = YES] On a scale from 0 to 10, where 0 is not at all helpful and 10 is very helpful, how helpful were the instructions on how to install the items that came in the kit?

Response Option	Percent (n=272)
0- Not at all helpful	0%
1	0%
2	0%
3	0%
4	0%

5	3%
6	5%
7	9%
8	15%
9	18%
10 - Very helpful	48%
Don't Know	2%

Q6. [Ask if Q5<7] What might have made the instructions more helpful?

Verbatim Response	Count (n=22)
They were fine	1
They said everything very well	1
There were no washers that were talked about in the instructions just teflon tape and no directions to use the tape.	1
step-by-step diagram for the show head installation	1
Specific use case or online video tutorials for individuals that are less likely to apply the items in the kit in the correct manner.	1
sheesh	1
Nothing, I know how to install	1
Nothing that remember. They went helpful to me because I already knew how to use the things that came.	1
Nothing	3
not sure	1
Na	1
More thoroughness	1
More diagrams	1
More details	1
Little more detail or more pics	1
Did not understand at all how to install would have had to call a plumber	1
Clear talk	1
Better pictures	1
Basic pin points	1
A little more simplified.	1

Q16a. Can you please explain any dissatisfaction you had with [DISPLAY ALL ITEMS IN Q16 THAT ARE <7]?

### Showerhead

Verbatim Response	Count (n=21)
Was smaller than I prefer	1
Very low pressure decreases the enjoyment of a shower	1
They didnt make any difference	1
sheesh	1
Reduced pressure	1
Pressure changes during shower	1
Options	1
Not very strong pressure.	1
None	1
No water pressure at all. How are you supposed to shower with that??	1
no dissatisfaction	1
It reduced the pressure to the point of making the experience unenjoyable.	1
It had very little water pressure.	1
it does not fit my hand held device	1
It does not allow enough water flow.	1
I ordered the upgraded shower head with hose The hose is too short to comfortably spray yourself off I have stand very close and barely more to keep from tugging on the hose The head seems to high It can not be adjusted to hang lower Also the material the	1
Even for my kids it was to reduced amount of flow to adequately rinse off.	1
does not fit well with shower wand.	1
difficult to put own; also have two bathrooms, one that's not being used	1
Didn't have any	1

Did not let enough water through, Limited the flow	1
--	---

### *Kitchen Faucet Aerator*

Verbatim Response	Count (n=19)
Worked OK but not excited about it.	1
water didn't have enough pressure while use the filter, I guess wasn't good enough.	1
Takes forever for the water to heat up due to decreased flow.	1
sheesh	1
Reduced pressure	1
none	1
It's ok looks cheap I like products that look good and last a long time	1
It would not work as it should, and did not fit the faucet exactly.	1
It would make the water come at a good flow, got molded, would fall often	1
It seemed much louder than the original.	1
It has a continuous spray and sometimes I would like it to not have a continuous spray, just a regular spray	1
It doesn't do very well when you have sediment in your pipe lines (currently working on having the sediment taken care of)	1
I like to have a water filter on my sink	1
Hard to change from normal to shower flow	1
Didnt make a difference	1
Did not let enough water through, Limited the flow	1
Did not fit spigot	1
Did not fit our delta faucet	1
Broke	1

### *Bathroom Faucet Aerator*

Verbatim Response	Count (n=18)
would not screw on straight, constant leak	1
Would not connect to faucet correctly.	1
Takes forever for the water to heat up.	1
same as the other	1
same as the kitchen filter problems in the kit	1
Reduced pressure	1
Not enough water coming out for me	1
None	1
n/a	1
Lose water pressure	1
it works fine	1

I didn't notice any difference	1
flow too restrictive. I know it has to be, but it just wasn't sufficient	1
Fair	1
Drastically reduces the water pressure	1
Didnt make a difference	1
Did not let enough water through, Limited the flow	1
Broke	1

*Pipe tape*

Verbatim Response	Count (n=7)
Not enough provided	1
None	2
It deteriorated after two years.	1
I used that type wrap before and can't say it is much good.	1
DIDNT STICK	1
All good	1

## Appendix F DEP Participant Survey Results

This section reports the results from each question in the DEP participant survey. Since the results reported in this appendix represent the “raw” data (that is, none of the open-ended responses have been coded and none of the scale questions have been binned), some values may be different from those reported in the Process Evaluation Findings chapter (particularly: percentages in tables with “Other” categories and scale response questions). Only respondents who completed the survey are included in the following results.

- Q1. [Read if mode = phone] Hi, I’m \_\_\_\_\_, calling on behalf of Duke Energy. We are calling about the Save Energy and Water Kit you got from Duke Energy.

This kit included faucet aerators, one or two showerheads, and pipe tape that can help you save water and energy in your home. Do you recall receiving this kit?

Response Option	Percent (n=35)
Yes	100%
No	0%
Don't know	0%

- Q2. [Display if mode = web] We are conducting surveys about the Save Energy and Water Kit you got from Duke Energy. This kit included faucet aerators, one or two showerheads, and pipe tape that can help you save water and energy in your home.

Do you recall receiving this kit?

Response Option	Percent (n=308)
Yes	100%
No	0%
Don't know	0%

- Q3. DELETED

- Q4. Did you read the included instructions on how to install the items that came in the kit?

Response Option	Percent (n=343)
Yes	85%
No	11%
Don't remember	4%

- Q5. [Ask if Q4 = YES] On a scale from 0 to 10, where 0 is not at all helpful and 10 is very helpful, how helpful were the instructions on how to install the items that came in the kit?

Response Option	Percent (n=291)

Q16a. Can you please explain any dissatisfaction you had with [DISPLAY ALL ITEMS IN Q16 THAT ARE <7]?

*Showerhead*

Verbatim Response	Count (n=32)
Truthfully the one I have already had better settings as far as adjusting the type of flow from the shower head and has a light to let you know when the temperature is correct. I really loved the original shower heads we had so they are now back on.	1
Too little water to take a shower in.	1
They reduced the water flow at first, but I can no longer see a reduction.	1
The water pressure coming out of the showerhead	1
The shower head was nice, we just prefer a shower head with a corded handset. That makes cleaning or washing the dog easier.	1
Style	1
Showering was not as enjoyable with the lower pressure.	1
Reduced water stream too much	1
pressure seems to be variable from time to time	1

Pressure	1
On aa well they didn't perform well I purchased another online word much better	1
not really adjustable	1
Not enough water pressure	1
Not adjustable enough	1
NONE	1
No water pressure	1
Need more pressure	1
My water pressure was not very strong during the use of the showerhead	1
My husband thinks the water pressure is too low with this shower head. It doesn't bother me. I prefer to shower at the YMCA anyway.	1
My husband didn't like it because he said the flow was not strong enough.	1
its to slow of a flow	1
It was to small	1
It made for a miserable shower.	1
It didn't match my current faucet set up.	1
I prefer a handheld	1
I like more options with my shower head	1
Flimsy	1
Don't remember	1
Doesn't spray very hard	1
Didn't fit	1
Did not like the water pressure.	1
Can be better products	1

#### *Kitchen Faucet Aerator*

Verbatim Response	Count (n=18)
Worked ok	1
Too small	1
There wasn't enough water pressure. it made the water pressure very low in the sink.	1
Not adjustable enough	1
No water pressure	1
N/A	1
LOVE IT	1
It works fine, but restricted water flow presser when trying to rinse things off	1
It served its purpose of lowering water which is why I disliked it	1
It didn't seem to fit very well on our faucet.	1
I needed more pressure coming out	1
has very low pressure	1

had to replace kitchen faucets not due to the aerator, it limits the water too much.	1
Don't remember	1
Didn't last long	1
Didn't like pressure	1
Couldn't get a correct fit even with the tape and waterhose	1
Can be better	1

### *Bathroom Faucet Aerator*

Verbatim Response	Count (n=26)
Worked ok	1
too big	1
The water pressure was reduced so much it makes it difficult to wash hands and brush teeth. It seems we use as lot more water this way.	1
The water pressure was really was really low	1
same as kitchen. both faucets ended up being replaced but not do to the aerator.	1
poor water flow	1
One seems to be working OK, but the other restricts water flow too much. Thinking about replacing it.	1
Not really sure I could tell the difference since it was installed with the new head	1
None	3
No water pressure	1
Neutral. Not dissatisfied.	1
Less pressure	1
Its ok for washing hands but if I have to fill up a cup or anything it takes too long	1
It was okay	1
It leaked and you couldn't get enough water to do anything with it.	1
It actually leaks a bit around the seal.	1
I wasn't dissatisfied just took some getting used to	1
I realize its purpose, but it needs more flow	1
Don't remember	1
Didn't like pressure	1
Didn't fit	1
Cheaply made	1
Cheap, there are better ones	1
Cheap feeling and were very tall. They were about twice the height as the original.	1

### *Pipe Tape*

Verbatim Response	Count (n=11)
Unhappy with the way it looks	1
There was not enough	1

Really need long lengths of foam pipe wrap. I have long runs of piping underneath of my home.	1
Not enough	1
Need more. Not enough in Kit.	1
It was good but the stuff you can buy at Lowe's is better	1
It did not adhere very well, even to clean pipe.	1
Don't remember	1
Didn't use	1
Average	1
adhesive didn't stick very well	1

Don't know	1%

Q66. Including yourself, how many people currently live in your home year-round?

Response Option	Percent (n=343)
I live by myself	18%
Two people	36%
Three people	17%
Four people	16%
Five people	5%
Six people	2%
Seven people	0%

Eight or more people	1%
Prefer not to say	4%
Don't know	1%

Q67. What was your total annual household income for 2016, before taxes?

Response Option	Percent (n=343)
Under \$20,000	7%
\$20,000 to under \$30,000	8%
\$30,000 to under \$40,000	8%
\$40,000 to under \$50,000	10%
\$50,000 to under \$60,000	8%
\$60,000 to under \$75,000	11%
\$75,000 to under \$100,000	12%
\$100,000 to under \$150,000	7%
\$150,000 to under \$200,000	2%
\$200,000 or more	3%
Prefer not to say	23%
Don't know	2%

Q68. What is the highest level of education achieved among those living in your household?

Response Option	Percent (n=343)
Less than high school	0%
Some high school	0%
High school graduate or equivalent (such as GED)	12%
Trade or technical school	8%
Some college (including Associate degree)	23%
College degree (Bachelor's degree)	25%
Some graduate school	3%
Graduate degree, professional degree	16%
Doctorate	4%
Prefer not to say	9%
Don't know	1%

Q69. Finally, what is your year of birth?

Response Option	Frequency (n=343)
18-24	1
25-34	39
35-44	58
45-54	52
55-64	54
65+	53
Prefer not to say	86

## **EM&V Activities**

### **Planned Evaluation, Measurement and Verification (EM&V) Activities through the rate period (Dec. 31, 2021)**

Evaluation is a term adopted by Duke Energy Progress (DEP), and refers generally to the systematic process of gathering information on program activities, quantifying energy and demand impacts, and reporting overall effectiveness of program efforts. Within evaluation, the activity of measurement and verification (M&V) refers to the collection and analysis of data at a participating facility/project. Together this is referred to as "EM&V."

Refer to the accompanying Evans Exhibit 11 chart for a schedule of process and impact evaluation analysis and reports that are currently scheduled.

### **Energy Efficiency Portfolio Evaluation**

DEP has contracted with independent, third-party evaluation consultants to provide the appropriate EM&V support, including the development and implementation of an evaluation plan designed to measure the energy and demand impacts of the residential and non-residential energy efficiency programs.

Typical EM&V activities:

- Develop evaluation action plan
- Process evaluation interviews
- Collect program data
- Verify measure installation and performance through surveys and/or on-site visits
- Program database review
- Impact data analysis
- Reporting

The process evaluation provides unbiased information on past program performance, current implementation strategies and opportunities for future program improvements. Typically, the data collection for process evaluation consists of surveys with program management, implementation vendor(s), program partner(s), and participants; and, in some cases, non-participants. A statistically representative sample of participants will be selected for the analysis.

The impact evaluation provides energy and demand savings resulting from the program. Impact analysis may involve engineering analysis (formulas/algorithms), billing analysis, statistically adjusted engineering methods, and/or building simulation models, depending on the program and the nature of the impacts. Data collection may involve surveys and/or site visits. A statistically representative sample of participants is selected for the analysis. Duke Energy Progress intends to follow industry-accepted methodologies for all measurement and

verification activities, consistent with International Performance Measurement Verification Protocol (IPMVP) Options A, C or D depending on the measure.

The field of evaluation is constantly learning from ongoing data collection and analysis, and best practices for evaluation, measurement and verification continually evolve. As updated best practices are identified in the industry, DEP will consider these and revise evaluation plans as appropriate to provide accurate and cost-effective evaluation.

### **Demand Response Program Evaluation**

DEP has contracted with independent, third-party evaluation consultants to provide an independent review of the evaluation plan designed to measure the demand impacts of the residential and non-residential demand response programs and the final results of that evaluation.

Typical EM&V activities:

- Collect program data
- Process evaluation interviews
- Verify operability and performance through on-site visits
- Collect interval data
- Program database review
- Benchmarking research
- Dispatch optimization modeling
- Impact data analysis
- Reporting

The process evaluation provides unbiased information on past program performance, current implementation strategies and opportunities for future improvements. Typically, the data collection for process evaluation consists of surveys with program management, implementation vendor(s), program partner(s), and participants; and, in some cases, non-participants. A statistically representative sample of participants will be selected for the analysis.

The impact evaluation provides demand savings resulting from the program. Impact analysis for EnergyWise involves a simulation model to calculate the duty cycle reduction, and then an overall load reduction. Impact analysis for CIG-DR involves statistical modeling of an M&V baseline load shape for a customer, then modeling the event period baseline load shape and comparing to the actual load curve of the customer during the event period.

The field of evaluation is constantly learning from ongoing data collection and analysis, and best practices for evaluation, measurement and verification continually evolve. As updated best practices are identified in the industry, DEP will consider these and revise evaluation plans as appropriate to provide accurate and cost-effective evaluation.

DEP DSM/EE Programs - Anticipated EM&V Schedule  
As of June 3, 2020

DEP DSM/EE Programs - Anticipated EM&V Schedule

Program Name	NC Docket	SC Docket	Short name	2020 2nd Quarter	2020 3rd Quarter	2020 4th Quarter	2021 1st Quarter	2021 2nd Quarter	2021 3rd Quarter	2021 4th Quarter	Notes
Commercial Demand Response	Docket No. E-2, Sub 953	Docket 2010-41-E	CIG DR			REP <sup>(2019)</sup>				REP <sup>(2020)</sup>	tentative
Distribution System Demand Response	Docket No. E-2, Sub 926	Docket 2009-190-E	DSDR								
Nonresidential Smart \$aver EE Products & Assessment (Prescriptive)	Docket No. E-2, Sub 938	Docket 2009-190-E	EEB	REP					PROC/IMP	PROC/IMP	Smart \$aver Prescriptive DEC combined with DEP
